Stephen Singer, Sec'y.

Rep. Stenvick Gets Vacation.

St Paul, Dec. 23.—On account of an accident, Representative O. T. Stenvick, Bagley, Minn. a representative from Clearwater, Pennington, and Red Lake counties, has been excused from the first three weeks of the Minnesota legislature.

To Open Office In Duluth.

Dr. J. T. Turley, Dentist, who has been making this point every so often, is opening up an office in Duluth. He wishes us to inform our readers, that he will miss his January trip, but will be around in February as usual. Watch for his adv. and posters.

Dry and Out of Debt.

Moorhead, the "City Dry" Minnesota's one 5,000 population city that doesn't owe a nickle, will have a tax rate of 48.5 mills for the coming year, the lowest with but a single exception in Clay county, and less than the levy prior to the elimination of the saloons a year and a half ago.

Moorhead the first of this month retired a $40,000 bond and in so doing cleared itself of all debt.

Georgetown is the only Clay county city with a smaller tax rate than Moorhead, while Ulen, Hawley, Glyndon, Dilworth, Barnesville and Felton pay a higher tax rate—Ada Herald.

Gasoline Explosions Becoming Numerous in Smaller Towns.

Many garage fires from the smaller towns and villages of Minnesota are being reported, says Robert W. Hargadine, state fire marshall.

Four men were injured, one probably fatally, as a result of careless placing of a barrel of gasoline in a garage at Clinton last week.

Persons conducting garages are evidently becoming careless and it is important that the dangerous element in gasoline should never be overlooked for an instant. The absent-minded man who places a burning cigar or cigarette stub near a barrel of gasoline, or who takes a lighted lamp into a garage is taking his life in his hands and is also criminally negligent in relation to the destruction of property.

Never take chances. Be sure the gasoline tank even though it is outside of the garage is perfectly tight and never, above all things, fail to observe the common rule of caution.

Snow Drifts Stop Collision Of Trains.

What might have been a disastrous rear-end collision between Great Northern passenger train No 185 and a freight near Delorme siding between here and Tilden Junction, was averted by a snow pile on the tracks which delayed the freight until the passenger train got under way. The passenger train had run full speed ahead into a drift with such force that all the front windows in the engineer's cab were broken and the cab filled with snow. Shovelers who were on board dug the train out and the engineer whistled for the rear brakeman to return to the train. Just as he reached the train the freight which he had been sent to flag hove in sight 900 feet away and would have hit the passenger train but for the fact that it was slowed down by a drift. The noise of the wind had made it impossible for the freight engineer to hear the torpedoes which the flagman had placed on the track—Red Lake Falls Gazette.

Finberg--Quist.

On Sunday at 5 o'clock in the afternoon, at the home of the bride's parents, occured the marriage of Miss Mamie Finberg, daughter of Mr. and Mrs O. Finberg, to Irving Quist. Rev. Albin A. Larson read the service. Melvin Finberg, brother of the bride, and Miss Clarice, sister of the bride, acted as witness, while only members of the family were present at the ceremony. Following the wedding the couple left for their home in this city at 815 Main avenue north, where the groom had everything provided ready to go to housekeeping. The bride is well known in Thief River Falls and has practically grown up in this city. She has been teaching in public schools at various places during the past years.

The groom is also well known here, having resided in Thief River Falls for many years. He is at present employed as county surveyor for Marshall county.

The marriage came as a complete surprise to everyone and even the closest friends of both parties knew nothing of the affair.

The many friends of the newlyweds extend their best wishes for a happy and prosperous married life—Times.

"Those Dreadful Twins"

A home talent play entitled "Those Dreadful Twins", will be given under the auspices of the Goodridge Literary Society, in the Goodridge Hall, Friday evening, Jan. 12th, at 8 o'clock. This play promises to be a winner, and you will miss the time of your life if you fail to attend. Proceeds will be donated by the Society, to the fund for the purchase of a piano for the Goodridge Consolidated Schools. Come and help a good cause along.

Much State Land Sold.

26,509 acres of land was sold in Roseau county in 1916, at an average price of $7.52 per acre. This is more than one-third of the entire school land sales in the state.

In 1915 a total of 3,821 acres were sold in this county at an average price of $6.16 per acre.

The land sold in 1916, if all in one block, would make an entire township, and five or six sections more.

The direct cause of the immense sale this year is the drainage projects under construction.

The average price of state land throughout the state was $7.25 per acre—Warroad Pioneer.

Commercial Club Elects Officers.

At the annual meeting of the Goodridge Commercial Club, held Thursday evening, the following officers were elected for the coming year;

President	Nick Bundhund
Vice President	Jay Payne
Secretary	H. W. Smith
Treasurer	G. C. Gulrud.

The committee on the creamery reported that a list had been circulated among the business men and a little better than a thousand dollars worth of stock had been subscribed towards the building of a creamery here.

The list is also to be circulated among the farmers, and it will depend largely on the amount of farmers, who will take stock, whether we will get a creamery here or not. The dairy business is the coming industry in this part of the country and it is hoped that every one interested in the building up of this section will take stock in the proposed creamery, and that we may see one located here in the near future.

Fire Laddies Called Out.

Thursday morning at about 10 o'clock a. m. the fire bell rang, calling the fire Laddies to the Abe Johnsrud residence, were it was found, that fire had started from an over heated stove pipe in the attic of the house.

This might have proved a disastrous fire but for the quick action of the department, who soon dispacteled the flames. Not very much damage was done. Mr. Johnsrud as a token of thanks for the quick action of the fire department set up a box of cigars to the boys, and that evening the fire laddies enjoyed a real old fashioned smoker. The evening was spent in playing Whist and Rummy, and all present enjoyed the evening to the fullest extent.

Pleasant View Items.

Fred Sundby called on L. E. Stover Thursday forenoon.

Misses Clarice and Myrtle Knutson were in Thief River Falls a few days last week.

Muns Jelle made a trip to Goodridge Saturday.

L. E. Stover and Herman Kastner were fortunate enough to get two wolves in the last two weeks.

The Xmas tree and program given by Joseph Weeks and the Union Hope Sunday School was well played, as the school children had many recitations and songs and also a monologue or so, while the Sunday School gave two nice plays, Songs and a couple of Duets. There was a large crowd and the program was enjoyed by all. There was plenty of treats for all besides other presents. Those who took part in the plays were, Mrs. Sivert Anderson Miss Bella Anvinson, Mr. and Mrs. L. Stover, Muns and Ed. Jelle, Raymond Stover and Clarise Anderson. Those in the other play were, Mrs. Cunningham and Sherlock, Mrs. Odell, Mrs. Bownsiner, Mrs. C. Edwin, Miss Vera Odell and Miss Inger Finsaud.

Miss Hannah Jelle returned home Friday to spend Xmas holidays with her parents.

Mr. and Mrs. Sivert Anderson made a trip to Theif River Falls last week.

Miss N. Rainey is paying her home stead a visit now days.

Lashed For His Discovery.

According to an old document discovered some time ago in Australia, gold was first discovered by a convict near Paramatta in 1789. The unfortunate fellow was at once charged with having stolen a watch and "boiled it down" and, being convicted by the rude court of those early days, was given 150 lashes for his pains. In later years the record of this incident was closely examined by an undoubtedly competent authority, who was quite convinced of the genuineness of the convict's story.

TO LIE NEAR HER FIVE HUSBANDS IS LAST WISH

Mrs. Van Sickle Had Personally Erected Tombstones to Them.

La Crosse, Wis.—To be buried in her own private cemetery in a corner of her farm near the graves of her five husbands was the last wish of Mrs. Emma C. Van Sickle, who died recently.

Over the graves of her husbands are tombstones erected by the wife's own hands. One has this verse inscribed upon it:

> Clintie; my heart clings to thee, love.
> In heaven I hope to meet above.
> You was ever kind and true to me.
> So was I to you Emma C.

Another reads:

"Peter, died Jan. 12, 1854, aged fifty-three years By Emma."

The other three stones are small and the inscriptions brief One reads "D. C. V.," another "P. D. C." and the third "P. E."

WAR DRIVES FOREIGN THIEVES TO AMERICA

Detectives Expect Big Haul In Jewelry at Some Society Event This Winter.

Washington.—If you happen to own a jewel collection and your taste runs toward wearing it in public, you had better hire a bodyguard this winter. The United States is overrun with European crooks, some of them the smoothest thieves on the continent.

Private detective and police agencies in New York, Boston, Philadelphia, Washington, Chicago and other big centers are looking forward to one of the most active years in the last decade. It's all on account of the European war, which has made theft hardly worth while on a big scale across the water.

In Washington there's a detective agency which specializes in the guarding of guests and jewelry at big social functions. The business of this agency is not confined to events at the capital, for private detectives of faultless manner and speech are sent out on jobs as far west as Chicago by this same agency.

One man who has devoted years of experience and his organization of sleuths to the protection of social leaders and their guests recently returned from a trip that extended north to Boston and west to the Mississippi.

"It's going to be a big year for agencies like ours," he said. "Within the past twelve months Europe has been sending over some of the cleverest jewel thieves this country has ever seen, and they have only come here when it was clear that robbery as a profession was up against hard times abroad until the war was over."

INHERITANCE AFTER YEARS.

Rover Never In One Place Long Enough to Apply For It.

St. Louis.—George Weise, a former sailor and of an admitted roving disposition, recently received $390.25 from the local free legal aid bureau, representing his share of the estate of an uncle who died in Adrian, Mich., eighteen years ago.

Weise applied to the bureau several days ago and asked Matthew Conckling, assistant superintendent, to assist him in getting his inheritance. He explained that he had never applied for it because since the death of his uncle he had not been long enough in one place to take the time to apply for his share.

Conckling wrote to Adrian and in reply to his letter received one from E. A. Cole, present owner of the property of Weise's uncle, Edward Bauer, containing the money due Weise and a quit claim deed to the property for the latter's signature.

DRIVES MILES FOR MAIL.

Farmer Will Not Allow Rural Carrier to Bring It.

Smith Center, Kan.—Frank Nichols lives on route No. 5 out of this city. For years Nichols has stubbornly refused to have his mail come by carrier, although a route runs right by his door.

Each Saturday he makes the eleven mile drive from home and gets his mail out of the postoffice here.

He insists the carrier system is an unnecessary expense to the government and that it is putting false and injurious notions into the rising generations on the farms.

Killed Himself Running.

Bremerton, Wash.—Because Wesley Antony, fifty-four years old, did not want to be late for work recently he ran seven miles around the shores of Puget sound. When he arrived at the navy yard he collapsed and died a few moments later in the Marine hospital.

PLAN TO STRENGTHEN ARMY FLYING SERVICE

Course of Instruction For Field Officers at San Diego.

New York.—Plans have been practically completed for the establishment of additional army aviation stations and schools. Stations and schools have already been instituted at Mineola, N. Y.; Chicago, San Diego, Cal.; Newport News, San Antonio, Miami, Fla., and Columbus, N. M. It is expected that stations will soon be established at Philadelphia and Memphis.

A corps of instructors will be maintained at each station, and classes for national guard officers and reserve aviators will be held. It is planned to cover the entire country with stations and schools, and it is believed that they will serve to develop an efficient corps of active and reserve aviators.

One of the latest features inaugurated by the aviation section of the signal corps is a course of instruction for field officers. It will be conducted at San Diego. Several officers have already been detailed to take the course offered there.

The signal corps has now purchased or let the contracts for 350 machines, ninety of which are water machines. About $7,000,000 will be required to purchase all the material which has been contracted for by the corps.

ONLY WHITE HORSES ARE SEEN IN GERMAN CITIES

Dark Animals Used For Army. Four-fifths of Taxis In Berlin Electrified.

Berlin.—Almost all the horses you see working in the towns and fields in Germany are white or flea bitten gray. All the other colors are used for army work. The whites are not, their color being too conspicuous. But the demand for horses has been so great that even the whites are used when they are young, being painted dark. The horses left for civilian purposes are the old ones. Most of those you find attached to the ancient droshkies on Unter den Linden look as if they were cousins to the eohippus that Noah took with him into the ark.

The age of the drivers corresponds to the antiquity of their steeds. Most of them are graybeards, but by way of paradox their girths are as great as those of their horses are small.

Four-fifths of the taxis are electrified, which enables them to proceed at a slow, dignified pace for short stretches. The few internal combustion motors left use benzol in place of gasoline, which is sharply restricted to official need military, industrial and those of the high personages.

In spite of the leather shortage, the German soldier still clings to his boots. The bulk of the German soldiery is recruited from the agricultural class, which has been accustomed to boots and does not willingly use other footwear.

SHARK GOT HALF HIS CATCH.

Sudden End of Fisherman's Great Expectations.

Honolulu.—What promised to be one of the biggest ulua catches of the season for Tax Collector Charles T. Wilder was spoiled when a big shark took half of the fish's body as Wilder was pulling it in with his reel.

Wilder was having a fine tussle with what seemed a mighty game fish. His line sagged, and he felt only a slow-moving weight at the end of it. When he lifted from the water he found only half a fish—the head and fore portion of the body. The tail and hind parts were entirely gone. Scratches on the side of the fish showed that the shark had made two grabs, the second being successful. This seems to put an end to the theory that a shark cannot bite under water or upright, for nothing else could have bitten off that tail.

LINK BOYS IN LONDON AGAIN.

Fog Said to Have Been the Worst In Fifty Years.

London.—A fog which settled over London recently is described as being the most dense in fifty years. From early morning until a late hour London was a city of perpetual night.

The inconvenience was greatest in the evening owing to the light restrictions. Omnibuses stopped running and taxicabs disappeared from the streets. Pedestrians in the street carried torches. In the Strand torches were lighted and soldiers new to the metropolis had to be led about like blind men.

Wed at Stack's High Top.

Florence, Colo.—Bessie Norton, aged twenty-one, and Joseph Bowling, twenty-six years old, were married on top of a 200 foot concrete smokestack in an oil plant here recently. Practically the entire city witnessed the ceremony, which was performed by the Rev. W. J. Kiel.

THE HOUSEWIFE'S PRIDE

The housewife who serves pure, [illegible] home [illegible] to all. She shows [illegible] by giving to her [illegible] wholesome and strengthening [illegible]

All foods consist substantially of fats, carbohydrates (starches and sugars,) and proteins (white of egg, gluten, lean meats etc.). These three substances sustain, operate, and repair the human body. These are the average percentages contained in seven representative staple foods, as shown by U. S. Department of Agriculture Bulletin No. 142:

	Fats	Carbohydrates	Protein
Wheat flour	1.0	75.1	11.4
Potatoes	0.1	14.7	1.8
Beef, sirloin	16.1	- -	16.5
Butter	85.0	- -	1.0
Milk	4.0	5.0	3.3
Salt codfish	0.4	- -	16.0
Eggs	9.3	- -	13.1

Note the high percentages of proteins and carbohydrates in wheat flour. The butter spread on bread and the shortening used in making biscuits, supply the fat that makes these flour foods the balanced ration.

THE ELEVEN TOWNS

H. W. Smith, Editor & Publisher

Entered at the postoffice at Goodridge, Minn. as second class mail matter.

Many of the old stand pat newspapers have come out strong for a state owned paper mill, and no one would deny that the idea is a good one. At the same time it is really humorous. If some one had proposed that the state take over the iron mines and operate them for the benefit of the people, ninety per cent of these same papers would at once raise the cry that it is socialistic and impractical. You see, dear reader, "it depends on whose ox is gored." Public ownership is alright when it benefits the right party. It would not hurt some of these scribes if they could see themselves as others see them.

The recent developments in the peace move in Europe elicits the inquiry, who is most interested the common people or the rulers? Naturally it must be conceded that the millions of common people have more at stake than a few aristocratic degenerates. This fact having been established beyond dispute, it would naturally follow that the host of common people should have the most to say. But have they? The war would be ended in a week, if the people could have their way. Is there not something wrong with our form of government which allows one man or set of men to force such a condition upon a nation. And you need not think that your own country is any exception, for one man can precipitate us into war just as well as over in Europe. "Government for the people and by the people." Indeed.

The editor has been in charge of this paper about one year and feels gratified at the progress made. With the opening of the new year this paper wishes to thank all who have patronized it during the past and ask for your kind co-operation in the future. It is our endeavor to maintain a paper worthy of your support, but we can do so only by your support. It is not an easy matter to edit a paper in a small town and secure enough interesting reading matter. We admit that at times we have fallen far short of this. Therefore if you know any piece of news call the editor on the phone and let him know. If you have any communication, write it up and we will give it space. Ours is an open policy. You will be given freedom of expression, just so that your thoughts are couched in words fit for print. A newspaper should be the expression of the public opinion of the community, and that can only be accomplished by letting all sides be heard.

SPRUCE GROVE NEWS.

Ed. Schroeder of Aldrich, Minn. arrived in this section Saturday as a of the Paskewitz and Knutson families. Ray Paskewitz also arrived home from Fergus Falls after visiting at Aldrich, Staples, Philbrook and Goodridge.

Wm. Heyer and daughter came from Rolland Wednesday on their way to their homestead.

Xmas dinner was served at the Paskewitz home Sunday. The guests were Thos. Knutson and W. L. Olsan and families, Ed. Schroeder, Martin Knutson and Ray Paskewitz.

W. L. Olson assisted at the Ketzenberg hme Tuesday.

Wm. Luepker made a trip to Grygla one day this week.

New Year's dinner was served at the Thos. Knutson home Thursday. The guests were W. L. Olson and Wm. Paskewitz and families, Ed Schroeder and Martin Knutson.

MORTGAGE FORECLOSURE SALE.

Default having been made in the payment of the sum of Twelve Dollars which became due June 9th, 1916, and which sum is now past due and payable upon a certain mortgage duly executed and delivered by Geo. Dahl Lequam and Kaia Lequam, his wife, Mortgagors to Merchants State Bank of Red Lake Falls, a corporation of Minnesota, Mortgagee, bearing date, June 13th, 1914, and with the power of sale therein contained, duly recorded in the office of the Register of Deeds in and for the County of Pennington and State of Minnesota, on the 29th day of June, 1914, at eight o'clock A. M., in Book 53 of Mortgages on page 88.

Which said mortgage together with the debt secured thereby, was duly assigned by said Merchants State Bank of Red Lake Falls, Mortgagee, to R. H. Jackson, by written assignment, dated the 7th day of August, 1916, and recorded in the office of the Register of Deeds, in and for said County, on the 19th day of August, 1916, at Eight o'clock A. M., in Book 56 of Mortgages, on page 191. And,

Whereas said Mortgage is conditioned that if the Mortgagor shall fail to pay his prior mortgage of Six Hundred ($600.00) Dollars upon the same land, or any installment of interest due thereon that the Mortgagee in this mortgage, now being foreclosed, may pay the same and have a lien thereof under this mortgage, and default having been made in the payment of Thirty-Six Dollars, interest due June 9th 1916, upon said prior mortgage, the same was paid by said Mortgagee and by the herein mentioned Assignee of Mortgagee, and there is now due at the date of this notice upon this mortgage now being foreclosed, the sum of Forty-Eight ($48.00) Dollars, with interest upon said amount at the rate of ten per cent per annum from the 9th day of June 1916, and the further sum of Thirty-Six and 92/100 ($36.92) Dollars, the interest paid upon the said prior mortgage, and interest upon the same from the above mentioned date when the same became due, amounting in all to the sum of Eighty-Six and 12/100 ($86.12) Dollars, due and claimed to be due at the date of this notice, said mortgage containing a provision that the non-payment, when due, of any installment upon the note, which this mortgage is given to secure, causes the note to become due at once, and the Assignee of the Mortgagee having hereby elected to declare the whole sum due; and no action or proceeding having been instituted at law or otherwise to recover the debt secured by either of the mortgages in this notice referred to or any part thereof;

Now, Therefore, Notice is hereby given, that by virtue of the power of sale contained in said mortgage and pursuant to the Statute in such case made and provided, the said mortgage herein first described will be foreclosed by the sale of the premises described in and conveyed by said mortgage, to-wit:

The South half of the South West quarter (S½ of SW¼) of Section No. Thirty-Six (36), in Township No. One Hundred and Fifty-Two (152) North; of Range No. Thirty-Nine (39) West of the Fifth Principal Meridian and in Pennington County, State of Minnesota, with the hereditaments and appurtenances; which said sale will be made by the Sheriff of said Pennington County, at the front Door of the Court House, in the City of Thief River Falls, in said County and State on the 8th day of January, 1917, at eleven o'clock A. M. of that day, at public vendue to the highest bidder for cash, to pay said debt of Eighty-Six and 12/100 ($86.12) Dollars, and interest, and taxes, if any, on said premises, and Twenty-five Dollars Attorney's fees, as stipulated in said mortgage, and the disbursment allowed by law; subject to redemption at any time within one year from date of sale, as provided by law.

Dated, November 20th 1916.

R. H. Jackson,
Assignee of Mortgagee.

Fred L. Farley,
Attorney for Assignee of Mortgagee.
Red Lake Falls, Minnesota.

MORTAGE FORECLOSURE SALE:

Default having been made in the payment of the sum of Seven and 50|100 Dollars which became due July 8th 1915 and the further sum of Seven and 50|100 Dollars which became due July 8th 1916, each of which said sums are now past due, and payable upon acertain mortgage duly executed and delivered by Charles D. Omlid, a single man, Mortgagor to Merchants State Bank, of Red Lake Falls, a corporation, Mortgagee, bearing date the 8th day of July 1914, and with a power of sale therein contained, duly recorded in the office of the Register of Deeds in and for the county of Pennington, and State of Minnesota, on the 20th day of July 1914, at 8:30 o'clock A. M., in Book 53 of Mortgages on page 93.

Which said Mortgage, together with the debt secured thereby, was duly assigned by said Merchants State Bank of Red Lake Falls, Mortgagee, to R. H. Jackson, by written assignment, dated the 27th day of July 1916, and recorded in the office of the Register of Deeds, in and for said County on the 18th day of August 1916, at eight o'clock A. M., in Book 56 of Mortgages on page 190.

And, Whereas said mortgage is conditioned that if the Mortgagor shall fail to pay his prior mortgage of Five Hundred Dollars upon the same land, or any installment of interest due thereon that the Mortgagee in this Mortgage, now being foreclosed, may pay the same and have a lien therefor under this mortgage, and default having been made in the payment of Thirty Dollars, interest due July 8th, 1915, and in payment of Thirty Dollars, interest due July 8th 1916, upon said prior mortgage, the same was paid by said Mortgagee and by the said Assignee of the said Mortgagee, and there is now due and claimed to be due at the date of this notice upon this mortgage now being foreclosed, the sum of Thirty Seven and 50|100 Dollars, with interest upon said amount at the rate of ten per cent per annum from the 8th day of July, 1915 and the further sum of Sixty Dollars, the interest paid upon the prior mortgage, and interest upon each of said $30.00 items from the date each became due, amounting in all to the sum of One Hundred and One and 94|100 ($101.94) Dollars, due and claimed to be due at the date of this notice, said mortgage containing a provision that the non payment, when due, of any installment upon the note which this mortgage was given to secure, causes the note to become due at once, and the Assignee of the Mortgagee having hereby elected to declare the whole sum due; and no action or proceeding having been instituted at law or otherwise to recover the debt secured by either of the mortgages in this notice referred to or any part thereof.

Now, Therefore, Notice is hereby given, that by virtue of the Power of Sale contained in said mortgage and pursuant to the Statute in such case made and provided, the said mortgage herein first described will be foreclosed by the sale of the premises described in and conveyed by said mortgage, to wit: The West half of South West quarter of Section Number Nine (9), in Township Number One Hundred and Fifty-two (152) North of Range Number Forty-one (41) West of the Fifth Principal Meridian and situated in Pennington County, State of Minnesota, with the hereditaments and appurtenances; which said sale will be made by the Sheriff of said Pennington County, at the front door of the Court House in the City of Thief Riverr Falls, in said County and State, on the 8th day of January, 1917 at Eleven o'clock A. M., of that day at public vendue to the highest bidder for cash, to pay said debt of One Hundred and One and 94|100 ($191.94) Dollars, and interest, and taxes, if any, on the said premises, and Twenty Five ($25.00) Dollars Attorney's fees, as stipulated in said mortgage, and the disbursements allowed by law; subject to redemption at any time within one year from the date of sale, as provided by law.

Dated, November 16th, 1916.

Advises Farmers to hold Spuds.

Dean Alfred F. Woods of the state college of agriculture, has issued a warning to the farmers of Minnesota urging them to save potatoes for seed. If this is not done there is danger of a serious shortage next spring. The potato crop this season in southern states, as well as in the southern section of Minnesota, was light and in consequence southern buyers are scouring Minnesota in search of good seed. The hardy northern grown potatoes are in great demand in the south.

This condition coupled with the fact that the Minnesota crop was light this year will cause difficulty unless immediate steps are taken to hold our own potatoes. These conditions make it practically certain that the price of potatoes in the spring will pe sufficiently high to justify potato growers in holding whatever of their crop may be unsold until the planting season.

2,000,000 ORANGES TOO RIPE.

Shipments Valued at $50,000 Are Destroyed In Week.

New York.—Two million oranges, much too ripe for consumption, were destroyed in New York by a squad under the supervision of Lucius P. Brown, head of the bureau of foods and drugs of the department of health.

The oranges were taken from shipping and railroad terminals. They aggregated about 250 tons and were mostly from Porto Rico and Jamaica. The loss to the shippers was about $50,000.

The Nautical Idiom.

In "Glimpses of East Africa" Mrs Ethel Younghusband tells an amusing story of a venerable Parsee who was on board a big liner going to England. Some one wishing to make himself agreeable went up to him and said, "I hope, sir, you are a good sailor."

"Sailor, indeed!" said the indignant Parsee "Why, I am a first cabin passenger!"

FIFTY-FIFTY SPLIT FOR CONSCIENCE FUND

Washington.—The treasury department received a contribution for the "conscience fund," consisting of what had been three $100 gold notes and four $50 gold notes. The sender wrote that for "duties withheld" he desired to make restitution of the sum of $500. He said he had cut the five notes in two and when he should see in the newspapers that his communication had been received at the treasury department he would send the missing halves to the collector of the port of New York.

Tracked by a Human Weakness

By WILLARD BLAKEMAN

One morning the quiet town of Silver Waters—named for a stream running through it—was horrified at the announcement that Leonard Marston had been found murdered in his bed. Silver Waters was a summer settlement of wealthy persons who were not there in winter, but Marston had remained beyond the usual time, and the tragedy occurred late in November.

The house had evidently been entered for the purpose of plunder. It was generally known that Mrs. Marston, who was in the city at the time of the murder, had a great deal of valuable jewelry. Some of this was at the country house, and it was all taken by the robbers, as were her husband's studs, sleeve buttons, scarfpins, etc.

When the police, who were called in at once, came they took possession of the premises, allowing nothing to be touched till the arrival of Dempsey, a detective, who was to make a thorough examination.

Dempsey had a reputation of being one of the most skillful probers of crimes in America. When he arrived he began his search for something the criminal or criminals had left as a possible clew. There were no footprints, which are usually considered the most important pointers. Indeed, after an hour's methodical investigation Dempsey had discovered nothing. Then his eye caught a small object under a dresser from which Mr. Marston's belongings had been taken.

Drawing an electric lamp from his pocket, he flashed it upon the object and revealed a stud. Taking it up, he saw that it was a mosaic and recognized it as one that must have been made in Italy. Evidently in taking it from the box in which it and other articles of like character had been kept the thief had dropped it and it had rolled under the dresser.

This was the only clew that was found. Dempsey inquired of Mrs. Marston how many studs of the set her husband had possessed, where they had been procured and any other information the lady might give. He was told that there were three studs in the set, with a pair of sleeve buttons to match. She had brought them from Rome with her after her last visit there during the previous summer. The design was the same on all the studs and the sleeve links, a copy of the head of a statue in the Vatican called the Apollo Belvidere.

"That will do," said Dempsey. "It may be a long chase, but if persisted in the thief and murderer will at last be found."

Dempsey did not begin to probe the matter till a month after the robbery, then he got up a circular, a copy of which he sent to every pawnbroker and manufacturing jeweler in America. He gave a description of the mosaic stud and a picture of it. He got nothing from any pawnbroker, but from a jeweler he received a letter stating that two studs answering the description in his letter had been made into a pair of earrings in his shop. Dempsey responded to the letter in person and learned that the work had been done for a woman. She was well remembered by the clerk who took the order and was described as about twenty-eight or thirty years old, large, rather flashy in her dress, and her face and neck had been "calcimined."

From this point Dempsey worked with a large corps of assistants, whom he employed to go to public places of amusement, dining places, cabarets—indeed, such places as are frequented by the floating population of cities. Nevertheless a year passed with no results.

At last one of Dempsey's assistants, a girl about sixteen years old, reported that a friend of hers had told her that she had sat next to a woman at a movie show who wore mosaic earrings representing "the head of a man with curly hair." The assistants were instructed to follow the person if met with and note the residence. But the woman with the earrings could not be found. So the game was lost.

But Dempsey went at once to the city where the discovery had been made, hired a special corps of assistants and went about himself where pleasure loving people go.

One evening after dining at a cabaret he was lighting a cigar and about to move on when a woman entered, brushed past him and took a seat at a table with her escort. Dempsey's eyes were out for earrings, and he thought those the woman wore were mosaics. He took a seat at a table near the one at which the couple sat, but not near enough to get a close view of her earrings. The man ordered drinks, after which the couple danced. While they were dancing Dempsey took a seat within a few feet of the one the woman had left, though his back would be toward her. When she returned she took the seat she had occupied before. Dempsey turned around and, seizing one of the earrings in his hand, brought it to within a proper focus for his eyes.

When Mrs. Marston was going to bed that night she received a telephone message from Dempsey stating that he had found the stolen studs, the wearer had revealed the thief and murderer and he had been arrested.

"How did you do it?" asked the widow.

"It came through a human barbarism—a passion for adornment—which civilization has not eradicated," was the reply.

His Fishing Trips.

"Pa, where do you go fishing?"

"My son, I never go fishing nowadays."

"Well, Mr. Snarler said last night you were always throwing a sprat to catch a mackerel."

NEAL of the NAVY

By WILLIAM HAMILTON OSBORNE

AUTHOR OF "RED MOUSE," "RUNNING FIGHT," "CATSPAW," "BLUE BUCKLE," ETC.

COPYRIGHT, 1915, BY WILLIAM HAMILTON OSBORNE

NOVELIZED FROM THE PHOTO PLAY OF THE SAME NAME PRODUCED BY THE PATHE EXCHANGE, INC.

SYNOPSIS.

On the day of the eruption of Mount Pelee Capt. John Hardin of the steamer Princess rescues five-year-old Annette Ilington from an open boat, but is forced to leave behind her father and his companions. Ilington is assaulted by Hernandez and Ponto in a vain attempt to get papers which Ilington has managed to send aboard the Princess with his daughter, papers proving his title to and telling the whereabouts of the lost island of Cinnabar. Ilington's injury causes his mind to become a blank. Thirteen years elapse. Hernandez, now an opium smuggler, with Ponto, Inez, a female accomplice, and the mindless brute that once was Ilington, come to Seaport, where the widow of Captain Hardin is living with her son Neal and Annette Ilington, and plot to steal the papers left to Annette by her father. Neal tries for admission to the Naval academy, but through the treachery of Joey Welcher is defeated by Joey and disgraced. Neal enlists in the navy. Inez sets a trap for Joey and the conspirators get him in their power. Annette discovers that heat applied to the map reveals the location of the lost island. Subsequently in a struggle for its possession the map is torn in three parts, Hernandez, Annette and Neal each securing a portion. Annette sails on the Coronado in search of her father. The crew, crazed by cocaine smuggled aboard by Hernandez, mutiny, and are overcome by a boarding party from U. S. Destroyer Jackson, led by Neal. In Martinique Annette and Neal are captured and taken to a smugglers' cave to be blown up with dynamite, but are rescued by a sponge diver. Inez forges identification papers for herself as Annette. In an insurrection Neal and Annette are again captured.

EIGHTH INSTALLMENT

THE SUN WORSHIPERS

CHAPTER XXXIV.

The Jungle Trail.

Blindfolded and stumbling, Neal was led for miles over an almost untrod path.

As he went he listened, and twice he could have sworn he heard a woman's voice, a voice that he knew well—the voice of Annette Ilington. Once he heard her scream.

Suddenly there was a halt. There was much whispering and the low toned chattering of many people. And then Neal heard another scream—

"Neal! Neal!"

There was the trampling of a heavy body through the underbrush and then the rattling of a heavy chain and what seemed to be the unlocking of a door. There was another shriek, then silence.

Finally without warning Neal was seized in a gigantic pair of arms, tossed lightly over a huge shoulder and was carried rapidly along. Another door was opened and Neal felt himself flung—a bit too violently—into the corner of a stone-walled apartment. A door clanged to behind him and was locked and bolted. A voice assailed his ears.

"Senor," said this voice, "if you would be relieved of bonds and blinds, approach me."

Neal—not without apprehension—started up and staggered in the direction of the voice. A hand swung him about. Upon his head and wrists he felt the pressure of cold steel—the back of a sheath knife. His bonds fell at his feet. He swung about, stretched his arms and looked. Grinning sardonically at him through the bars was the face of Hernandez and behind Hernandez with blinking eyes stood the ever-present brute.

"We keep you merely for safety, senor," said Hernandez.

He swung on his heel, thrust the brute out of sight and disappeared.

Neal noted now that he was confined in a stone cell—dingy, dirty, miserable. He jumped at once to the correct conclusion. This was a fort.

He examined his cell critically. The mortar was disintegrating. The fort was very old. He took out his knife—they had still left him that—and stabbed viciously at the space in between the stones.

There was a rattle at the door of Neal's cell. A native insurrecto opened the door and set upon the floor a jug of water and a loaf of disreputable looking bread. Almost at the same time there was a rattle at the door of Annette's dungeon cell. She ceased her tapping suddenly and turned. The brute was entering—also with refreshments, such as they were.

Instead of disposing of these at once, he strode forward, his huge body towering above her, and held them out to her with a strange gleam in his eyes. She took the food and drink and laid them down upon the bench, staring at the brute the while. The huge anomaly took this as an invitation. He shambled closer toward her, never once removing his glance from her upturned wondering face. Then without warning he thrust forth a hand and stroked her hair.

Annette was startled. Yet there was so much docility in the expression of this half man, half animal, that she instinctively submitted to his touch. And there was something else—something struggling for expression in those strange, wide open eyes.

There was a quick step behind the brute and Hernandez entered. Annette shrank back into a corner of the cell.

The brute gazed at him, but still stood his ground. Hernandez in a rage struck him sharply on the shoulder and thrust him toward the door. The brute, cringing in his turn, half fell, half shuffled out of the cell, followed by Hernandez raining blows upon his back.

Hours passed. Suddenly an ominous whisper spread through the fort—a whisper of apprehension. There was much bustle.

During an interval of comparative quiet there was wafted into the range of Neal's hearing the one word—"Americanos." Then with two successive clangs the cell doors, Neal's and Annette's, were flung back.

They were bound and once more blindfolded. Then, each in the center of an ample escort, they stumbled, plunged and staggered once more through the jungle trail.

CHAPTER XXXV.

Sanctuary.

Meantime things had happened. Outside the fort there was camped a gang of about fifty insurrectos. Many were wounded; all seemed to be in tatters.

They had with them three Americanos. One was Joe Welcher, who sat sullenly upon the ground smoking a cigarette. Inez Castro was also in evidence. The third Americano was Neal Hardin's mother. She was the subject of considerable discussion, for she was ill.

"Get me two donkeys," said Hernandez. "I will send her back down the trail with Senorita Castro and Welcher."

A quarter of a mile away on the top of a jagged rock that thrust its head above the surrounding foliage there crouched a native scout. He watched a cruiser slowly steaming up the coast. He watched the shore—and the trails leading from the shore.

Suddenly he started—he had seen something ominous. He clung to his perch for one instant peering down to make quite certain. Then he scrambled to the ground and then crawled, leaped, staggered through the brush. He reached the insurrectos' camp and clutched his leader's arm.

"Americanos, capitan," he panted breathlessly. "They come."

"From whence?" queried the leader.

The insurrecto scout indicated the direction. Fear spread itself over the countenance of the leader.

Hernandez grunted. "We must vamoose. Senorita Castro," he said to Inez, "you and the two Americans shall go thither—east." He nodded to the leader. "We go west at once—and with our prisoners."

There Was Something Struggling for Expression in Those Strange Eyes.

It takes the trained eye of a native to know a trail when he meets one in the well-nigh impossible jungles of Dolores. The United States marines, a little [illegible] of 25 men, were beginning to realize this fact. For an hour they followed blind trail after blind trail, only to retrace their steps to a given starting point.

"Never mind," said their officer. "They're up there and we'll get them, and then—"

He stopped. A shower of dirt and small stones spattered on his head.

The officer looked up. Above him towered a cliff, and half way to the top of this cliff there ran a narrow ledge—a mountain pass. The officer ducked, for there was another shower of dirt and gravel. Then he caught sight of a donkey's tail swishing out over the precipice.

"I've got the trail," he said, "and a good trail it is, for it leads here—here to our very feet."

He was quite right. Some three-quarters of an hour later Inez and her small party passed that very spot—a spot now deserted.

Suddenly twenty-five American marines with drawn bayonets sprang from the jungle as by magic and surrounded them.

Inez, excellent actress, breathed an audible sigh of relief. "At last," she said, "we have found you."

The ensign advanced toward her and saluted. He glanced doubtfully at the half-dozen insurrectos wearing uniforms.

"Who are you?" he demanded of Inez.

"These," said Inez, with a wave of her hand, "are Dolores regulars who have befriended us, and we are three Americans, and one of us is sick. It is for her that we seek refuge."

He strode swiftly to the side of Mrs. Hardin. She was swaying helplessly from side to side in the saddle of her donkey, supported by two insurrecto escorts.

"Neal, Neal," she cried.

Inez dismounted and approached the officer. "She has the fever," she exclaimed, "and she raves in her speech all the time, lieutenant; she makes up names—all kinds of names."

"There are other Americans in the mountains?" he queried.

Inez opened wide her eyes and shook her head. "We saw none, sir," she said.

The ensign pondered. "This woman needs immediate attention. Take her to the launch and thence to the Albany." He bowed to Inez and beckoned to Joe Welcher. "You two must go along," he said soberly.

CHAPTER XXXVI.

Corazon del Sol.

After a march of hours in the very thickest of the jungle, Hernandez halted his band of insurrectos. The respite was welcomed. Exhaustion reigned supreme. Hernandez picked out two of the sleeker looking revolutionists.

"This trail," he said to them, "has been lately traveled. See where it leads."

Hernandez went back to his captives. He carried with him thick pieces of bread. He unloosed the bandages from their eyes.

"Mine hostages," he said lightly, "eat, drink and be merry."

Three miles further on there was a clearing in the jungle. Across this clearing was an ancient gateway and a crumbling stone wall, older than historic man himself. Two unprepossessing stolid stone figures guarded this gateway. A third guard now entered the foreground and passed through the ancient ruined gateway.

He was a living guard, but of a dead race. He was an Aztec. He had heard noises and he had come out to see as well as to hear.

And suddenly he saw and was seen in turn. Wriggling through the portions of the edge of the clearing suddenly appeared the two scouts sent forward by Hernandez. They crouched there, staring speechlessly at the Aztec warrior. He in his turn stared speechlessly at them.

But they had seen more than he had. They had caught a glimpse through that gateway of a mass of leaping, twisting flame, and they knew it for the thing it was.

An hour later, panting, breathless, with their tongues hanging out and their eyes still wide with terror, they crept up to Hernandez and clutched him by the arms.

"Corazon del Sol," they cried, their faces twisted with terror.

Ponto heard them. His eyes gleamed with sudden interest. He waddled to the side of Hernandez and nodded understandingly.

"Corazon del Sol," repeated Hernandez. "The Heart of the Sun."

Ponto nodded again. "The Heart of the Sun," he repeated.

"Well, what of it?" asked Hernandez.

"The lost tribe," whispered the scouts. "The Aztecs. Come," they cried, "we have no time to lose. They will be upon us. Fly."

Hernandez gripped each man by the wrist. "Speak, Ponto," he demanded.

Ponto tapped himself upon his chest. "I am of Aztec blood myself," he said. "I have heard of this lost tribe. I have heard of this city of Corazon del Sol. Many assume it to be a myth, senor, but it is no myth."

Hernandez nodded. "How many inhabitants of Corazon del Sol?" he queried.

"Tradition has it," said Ponto, "that it is a town surrounded by a wall and that its population never increases." He smiled grimly. "What human beings it does not need, it feeds to the Heart of the Sun—the flame."

"It will feed all of us to the flame," cried the scouts. "We must go back—back."

Hernandez leered. "Ponto," he said, "in front of us, according to these insurrectos, is a fiery furnace with a million foes. Behind us, camping on our trail somewhere, is a handful of American marines. Which do you choose?"

"Forward," said Ponto, "to the fiery furnace. Deliver me from a handful of marines."

CHAPTER XXXVII.

The Anger of a God.

Within the walls of Corazon del Sol there lived a god. He didn't know he lived—he was quite ignorant of his own existence. If he had ever lived he would have died from ugliness. But there were those who knew he lived. They were the inhabitants of this ancient Aztec village—Corazon del Sol, the Heart of the Sun. They knew he lived, because periodically and quite persistently he demanded flesh.

Just now he stared straight before him through the gates of the crumbling walls. The high priest followed his glance.

Suddenly the high priest started and held high his hand. A group of Aztec warriors answered the summons. In crude uneven order this crowd rushed through the gates and stood at bay. Across the clearing was another group—Hernandez and his crowd. The two groups faced each other, tense, wondering.

The high priest spoke—uttering unintelligible jargon. Hernandez turned to Ponto.

"What does this old devil say?" he demanded.

Ponto was panting with terror.

"He says," said Ponto, "that he wants to talk to you."

Hernandez pondered for a moment and toyed with the weapon in his hand.

Then he crossed the clearing and faced the high priest. Ponto from his vantage point of comparative safety translated in thin high-strung tones.

"You are interlopers," said the priest angrily, his cruel eyes watching the terror he inspired, "and you shall be destroyed. Behind me is fire, sudden death. We have many thousand warriors. We have an insatiable god. We brook no strangers—we tolerate no enemies. You are an enemy, you and yours. Go, and go at once."

Annette Was Watching With Eyes Wide With Terror.

"We are not enemies," returned Hernandez. "We are travelers—weary travelers. We have lost our way. We need rest and food. To turn back now means death."

The high priest shrugged his shoulders. "Follow me," he said.

He turned and passed between the divided group of warriors and entered the gate.

Hernandez followed, entering the walls three paces behind the priest. He led Hernandez to the center of the village.

With a long, lean, skinny finger, the high priest pointed to the sun god. He prostrated himself, then rose and gave a sharp command. Two Aztecs, clad in scarlet robes, darted forward, each with a burning brand raised high above his head. Before Hernandez was a pit sunk into the ground. It was piled high with fuel and from this pit there rose quite a familiar odor—the odor of petroleum. In went the burning brands and in the twinkling of an eye the fuel caught fire and a leaping, twisting flame sprang into the air.

Hernandez drew back. The flame was hot. It grew hotter as he watched. In a few moments it was a seething, roaring furnace.

Hernandez stood with folded arms. The high priest swooped down upon him and denounced him in withering jargon. Hernandez knew what it meant. It meant that they were to go.

"Ponto," he cried, "come here."

Ponto, quivering, crept through the double line of Aztec warriors and through the gate. Hernandez jerked his head toward the priest.

"Tell him," said Herandez, "that he must take us in."

Ponto obeyed. He began to plead in his oiliest accents. The high priest was firm. Once again he held up his hand and from every hut in the inclosure there sprang forth another group of warriors.

"Run, partner," cried Ponto, "run for your life."

But Hernandez did not run, for suddenly the countenance of the high priest had changed. A crafty smile spread over his leathery old face. Ponto followed his glance. At the other end of the clearing with a ray of sunshine full upon her crouched Annette Ilington.

Without removing his glance from the girl the high priest touched Hernandez on the arm and spoke in high shrill accents.

"What does he say?" demanded Hernandez of Ponto.

Ponto shivered. "He says," returned Ponto, "the sun god is angry. That he has commanded his people to destroy you all. That he will smite you hip and thigh unless—"

"Unless what?" queried Hernandez.

"You give the white girl to the god and the rest of you can get food and succor within the walls—the white girl for the god."

CHAPTER XXXVIII.

A Bride's Revolt.

Hernandez pondered once again. Then he nodded.

"We'll do it," he returned. "Tell that beast out there to bring the white girl in."

Ponto turned and ran waddling outside the gates. He gave a brief command to the brute and at the word the brute seized Annette and held her high upon his shoulder. At another word of command the brute marched toward the gate and entered it.

The high priest stood quivering, watching the approach of Annette and the brute. The four Aztecs in flaming red robes darted forward and held out quivering hands toward Annette.

"Give her to them," cried the priest.

"Give her to them," commanded Hernandez.

But the brute, his feet planted wide apart, stood his ground.

Hernandez sprang toward him, angrily seized the ever-ready whip from Ponto's hand and lashed the brute fiercely. He nodded to the four crimson-clad men and they tore Annette roughly away and dragged her to the temple. Neal hurled himself at the four acolytes, but Hernandez dragged him back.

Neal was then thrust into a dungeon and its door was locked.

Meantime within the temple things were happening. Annette found herself in an apartment gorgeously furnished with Aztec tapestries. Two old women—toothless, ugly—women with beards, attended Annette, chuckling and mumbling to themselves in glee. They produced from the recesses of the temple a dress, gorgeous, bizarre. They draped it upon Annette's slender form. They hung her head, neck and arms with glittering ornaments, and then they beckoned to her and led her to a window, and pointed, chuckling, through it.

Annette knew not what they said, but Ponto without distinguished easily the meaning of the high shrill tones.

"The sun god waits—is waiting for his bride."

Annette's glance traveled past the sun god. She started back in horror. Into that seething pit beyond the acolytes were casting huge quantities of fuel—pouring the contents of huge jars of oil upon the flames. Her glance traveled still beyond, and across an intervening space she saw a dungeon window and the white face of Neal. He waved his hand. And then strong hands were placed upon her shoulders and she was lifted from her feet and half dragged, half carried out of the temple into the center of the clear space before the sun god. The ceremony had begun.

Neal tore his glance for a moment from this scene and examined his cell. There was a window at his back—a heavily barred window. He seized the bars in desperation and found to his surprise that they were loose. With a superhuman effort, he thrust the bars outward, leaped through the aperture and darted swiftly into the jungle; then he looked about him for a tree and found the one he wanted.

It was a high tree, very high. He climbed it swiftly—climbed it to its topmost branches. Cruising slowly off the shore—and the shore was not very far away—was his cruiser, Albany.

He braced himself among the branches with his feet, ripped off his shirt, tied it by the arms about a broken branch and signaled to the ship.

Within the walls Ponto, still terror-stricken with the sun god's anger, turned his back for a moment upon that deity and upon that deity's high priest. Then suddenly he saw something. In the top of a high tree without the walls there was a white rag fluttering to and fro—and something more. A man.

Ponto gripped Hernandez's arm and pointed upward. The face of Hernandez froze. He darted toward the dungeon, saw that it was empty, then beckoning Ponto and the brute he darted to the stone wall and with their aid clambered over it.

Ponto, with considerably less agility and with the assistance of the brute, followed his companion over, and the brute in turn, his head and shoulders lashed with Ponto's whip wielded over the top of the wall, swung himself over and followed them.

Annette noticed the confusion—was the first to see it. Suddenly striking an attitude she raised her hand and arm and pointed toward the white flag fluttering from the tree top. The high priest stopped his droning and followed the direction of her hand with his glance. His acolytes stopped and stared—so did everybody else.

Annette saw her opportunity. Upon a standard by her side lay a heavy copper scepter. She seized it. Lithe as her body was she had inherited great strength—wonderful agility. Without a moment's hesitation she swung the scepter viciously about her head, dashing the high priest and his acolytes to the ground, knocking the Aztec warriors to right and left. Like a whirlwind she fought her way toward the gate, slammed it behind her and sped away.

CHAPTER XXXIX.

By His Eyelids.

Hernandez and his two companions reached the tree. They reconnoitered. Above him in the swaying branches all ignorant of the group below, Neal wigwagged his signals toward the Albany. His heart leaped within him, for the Albany wigwagged in return. She was doing more—she was sending off her fastest launch shoreward, crowded to the gunwale with marines—marines who knew their business.

Below Hernandez smiled a diabolical smile. He was watching, not Neal, but the swaying of the tree.

"Look," he said to Ponto, "see how these roots tug at this scant earthen covering. She is a tree growing on a rock. She totters. And she is more than a tree growing on a rock—she grows on the edge of a cliff. Beast, come here. Tell him, Ponto, what to do."

Ponto told him, emphasizing his commands with the ever-ready whip. The brute obeyed. He set his shoulders to the tree trunk and began steadily, tirelessly, persistently to push.

"Now, now," cried Hernandez, in a frenzy of excitement. "On, on."

The tree crashed desperately over the edge and toppled into the depths beneath.

As she did so there was a scream—a woman's scream—Annette's. Hernandez heard it; so did Ponto; but they could not locate it. Out of their sight, somewhere along that cliff, Annette was crouching watching with eyes wide with terror. She saw the tree bend slowly outward, though she did not know the cause.

Then her heart leaped within her, for the tree had dropped, toppling head over heels, so to speak, but by some great chance it had brushed Neal lightly, not heavily, against the cliff, and then had plunged down to its own doom leaving him grappling for his life with a clump of bushes on a narrow ledge below.

She saw all this and so did Hernandez and his partner, Ponto. Ponto smote the brute upon the shoulder. He pointed to a huge stone at his feet.

"Finish him," he commanded. "Go down and finish him."

The brute seized the stone and crept warily down a narrow path and reached the ledge upon which clung Neal.

The brute slowly raised the rock above his head. As he did so a small firm hand clutched him by the shoulder—a woman's hand. He turned and looked into the eyes of Annette Ilington. As though hypnotized he dropped the rock.

"Help him," commanded Annette, "help him. Do as I say."

Hernandez, white with rage, thrust Ponto behind him and leaned far over the edge of the cliff shaking his clenched hand impotently at the brute.

"Do as I say," he commanded. "I will flay you if you don't."

He leaned too far, not for his own safety, but for the safety of some of his belongings. A paper packet wriggled easily and joyously out of his breast pocket and slipped easily and joyously down the cliff, landing almost at Annette's feet.

The brute turned suddenly, darted forward, stretched forth a huge hand and jerked Neal from his precarious position up to the ledge—up to safety.

The three stood there clinging to the side of the cliff; the brute panting with wonder, Neal and Annette panting with relief. Suddenly Annette stooped and picked up a packet that lay at her feet. She uttered a little cry of recognition—and with good cause.

It was the identifying map—part of the evidence that linked her with the lost Isle of Cinnabar.

Ten minutes later Neal flung up his hands and cheered—and with good cause. Over the brow of a hill, clambering like mad, there swarmed up through the jungle a crowd of United States marines.

Hernandez and Ponto saw them from above and with wild oaths turned and incontinently fled. The brute, obeying a sudden impulse, crept swiftly along the ledge and followed his retreating masters.

Neal and Annette ascended more cautiously and carefully. They met the little squad of marines on the top of the cliff and joined them in the double quick toward the Aztec stronghold. They reached the clearing. The gates of the walled city were open and the walls bristled with armored Aztec warriors. The marines fixed their bayonets and made ready for a charge.

The Brute Slowly Raised the Rock Above His Head.

Suddenly, however, Neal held up his hands. "Listen," he exclaimed. From the unseen waters beyond there was the boom of a gun.

"It's my gun," said Neal. "I know her when she speaks—my six-inch gun."

The officer in charge of the squad held up his hand. "Halt," he commanded.

His squad halted. It was well they did. Through the open gate they could see the sun god's demoniacal countenance twisting and mounting in the red glare of the altar's flames. Across the strip of jungle they could hear the boom-boom of the gun.

Neal slapped his thigh with joy. "He's got the range already, boys," he cried. "Wait. Look—look—look."

With a mighty shout of triumph the marines leaped into the air yelling like demons themselves. They had good cause, for the gunner on the Albany had more than found the range—he had planted an exploding shell in the very middle of the sun god—and the sun god and his temple, amid shrieks from a hundred throats—burst into a thousand pieces—and disappeared.

Little "Snookie" Knutson spent a couple of days at the Paskewitz homo.

W. L. Olson and family visited at the Luepker home Thursday.

Ed. Schroeder returned to Aldrich, Tuesday after spending about two weeks at the Paskewitz and Knutson homes.

Thos. Knutson and wife passed Tuesday in Grygla On their way home they called at the Bockey home.

Eckard Muttsch and wife are enjoying a visit from their aunt and two children of Canada.

Wm Paskewitz attended the stockholders meeting at Grygla Tuesday.

An Old Drought Cure.

An old time specific for drought was simple enough. It was only necessary to burn fern. An interesting reference to this belief occurs in a manuscript letter preserved in the Pococke collection in the British museum. It is dated Aug. 1, 1636. It runs: "To My Very Loving Friend, the High Sheriff of the County of Stafford—Sr.: His majesty, having taken notice of an opinion entertained in Staffordshire that the burning of fern doth draw down rain and being desirous that the country and himself may enjoy fair weather as long as he remains in those parts, hath commanded me to write unto you to cause all burning of fern to be forborne."—London Spectator.

In view of the troubles in the logging camps of Northern Minnesota at the present time, the following editoria taken from the St. Paul Dispatch of January 3, 1917, might be of interest to our readers.

THE I. W. W.

It is announced that a band of the I. W. W. will invade the Twin Cities. Undoubtedly this will give many people, including official custodians of the peace, an attack of "I. W. W. heart." I. W. W. heart consists of approximately 99 per cent hysteria and 1 per cent intelligence. It manifests itself usually in an unwarranted anticipation of trouble and in an entirely unconstitutional misappropriation of police powers aimed, quite sincerely of course, at "stopping trouble before it begins." It pursues its course by giving the hungry, hunted, excitable objects of suspicion actual cause for rebellion and resistance. If bloodshead and disorder do not follow it is not due to the intelligence of those in authority.

The Industrial Workers of the World are the American exponents of that social philosophy known as syndicalism. It is a political faith of foreign origin which looks to the dispossession of the capitalists and the assumption of power and ownership by the industrial classes. It is, of course, a wildly visionary doctrine impossible of realization even if no resistence were offered. It lacks entirely the deliberative quality of socialism and fails even to define the system and the method whereby it proposes to bring about a reversal of the present order of proprietorship and employeship. As a social philosophy it need not cause alarm to those shocked by its principles for it contains the seeds of its own destruction. The educated mind realizes this. It is only the ignorant either among its proponents or opponents who give it serious attention as a social philosophy.

But syndicalism has been a factor in the industrial world because of the the power of its propaganda to effect organization among workers who could not or would not be aroused by the more arduous, more costly exactions of labor unionism. It has offered an opporunity for the exercise of the powers of daredevil leaders, some of whom are sincere and some of whom are not, some of whom ore honest and some of whom are unscrupulous, some of whom have done harm and some of whom have done good. There are good and bad I. W. W's as there are good and bad Republicans and Democrats.

But to assume that "I. W. W." is a synonym for felony or for anarchy is to confess lamentable and harmful ignorance. It is a philosophy founded, perhaps, on ignorance and illusionment. The only doubt of its entire ignorance and illusionment is caused by the manner in which it has been treated in a great many cases by representatives of the law. The way to enlighten and disillusion is not to misappropriate police powers and to deny ordinary personal rights

It has been the practice of police departments to arrest these men before any offense has been committed, to jail them without trial or to drop them out in the country penniles to shift for themselves. In this course the police have been abetted by ignorant people and cheered by misguided employers who fancy they can quell industrial discontent by ruthless, illegal and terrifying suppression.

These methods may be temporarily successful. But firmes temporarily suppressed will break out with new fury. There is one way in which I. W. W.-ism may be kept from doing serious damage. That is by fair treatment of workers and legal methods of preventing disorder. With such treatment syndicalism, either as a labor propaganda or as a social philosophy, must starve. Its desperation and its anarchy thrive most perhaps only, on the anarchy of the constituted powers of the law and on the ignoronce of the public which defends and abets this anarchy.

"Those Dreadful Twins"

A home talent play entitled "Those Dreadful Twins", will be given under the auspices of the Goodridge Literary Society, in the Goodridge Hall, Friday evening, Jan. 12th, at 8 o'clock. This play promises to be a winner, and you will miss the time of your life if you fail to attend. Proceeds will be donated by the Society, to the fund for the purchase of a piano for the Goodridge Consolidated Schools. Come and help a good cause along.

Rural School Notes.

The Christmas vacation is almost over for our rural schools. After another week most of the schools will again resume work and we trust that the second half of the school year's work will be happily completed. The County Superintendent noted with satisfaction the attendence which was exceedingly good in all the schools in the first months of the school year. A number of excellent Christmas entertainments were given. The Co. Supt. was fortunate in being able to attend Miss Jane Tuff's entertainment at Hasel some time before Christmas and the joint Christmas entertainments of districts 165 and 4 in town of Hickory. Teachers Misses Hannah Tellefson and Annie Tellefson.

Teachers of schools wherein there are pupils of the 8th grade that are capable of taking the State High School Board examinations in March should report the names, age, address, and No. of school district at once to this office A failure to report will eliminate such school from examination.

District school clerks should not forget to report to Co. Treasurer, Theo H. Liden, upon the Teachers Insurance and Retirement Fund. A report is due even the teacher is not subject to assessment. If not, such fact must be known by the Co. Treasurer. Blanks have been sent to all clerks; if any is still wanting, it can be obtained by addressing the Co. Supt.

SPELLING CONTESTS

Attention of the teachers are called to the following announcement by Miss Grace Sherwood of the Northwestern Agricultural College at Crookston relative to the forthcoming spelling contest at Farm Crop Show.

Crookston, Minn.,
December 8th, 1916.

Supt. E. A. Mostue.
Thief River Falls, Minn.

Dear Mr. Mostue:

The annual spelling contest will be held this year at the time of the Farm Crops Show, February 5th and 9th.

Each county may send two representatives; these to be chosen in any way wished. The railroad fares will be paid, the same as previous years.

The contestants must be from a one room rural school, or from a grade below the 8th in a consolidated or semi-graded school. Pupils from a district where a high school is maintained are not eligible.

The prizes will be the same as those given last year.

There will be a public spell down, an oral test of twenty five or fifty words or less. The points to be considered are as follows: All the words, capitals, periods, question marks and the punctuating of a direct quotation.

Very truly yours
Executive Committee
Farm Crops Show
Per GRACE B. SHERWOOD.

COUNTY CONTESTS

Our county has been well and satisfactorily represented at the spelling contests of the Farm Crop Show in previous years. Our boys and girls have carried home two or three prizes in the resrective contests.

We expect to participate in the contest as usual this year.

Teachers are asked to conduct trial contests in the respective schools under their charge with a view of sending one representative to the county contest to be held at Thief River Falls on Sat. Feb. 3rd. At this contest two pupils will be chosen to represent Penn. Co. at the Farm Crop Show. (See tee announcement above)

Further announcements will follow later. Watch for them. Teachers will please put their pupils thru a course of drills for this contest. The Eatons Contest speller is an excellent text to use. It can be had at the Co-Supts office costing $.30.

Respectfully submitted,
E. A. Mostue,

Cat Medicine.

The ancient physicians had a firm belief in the healing powers of different portions of the cat, probably from some confusion existing in their minds with regard to its nine lives. One of them gives as a valuable recipe to cure fevers two pints of water mixed with three drops of blood taken from the ear of an ass and certain parts of a cat's digestive organs.

Sardinia Gives Name, but No Fish.

We get the word "sardine" from Sardinia, but we get few sardines, says the National Geographic Magazine, for practically all of this "catch" is consumed locally. The tunny fisheries of the island, on the other hand, are important and profitable. The Genoese control the latter industry, for the Sardinians are not a maritime folk.

MOSQUITOES CLOSE MILLS.

Pest of Insects Compels Plants to Shut Down.

Connell, Tex.—The gulf coast region of east Texas and the western part of Louisiana have been afflicted with the worst scourge of mosquitoes ever known.

Several large lumber mills were forced to close down on account of the pest. Men and animals were tortured by the bites of the insects. Cattle and horses were attacked by veritable hordes of mosquitoes, and the animals huddled together in groups in an effort to protect themselves as much as possible from the bites.

On the farms smudge fires were kept burning constantly to drive away the pests, but these efforts seemed to be of little avail.

THE HOUSEWIFE'S PRIDE

The housewife who serves pure, home-baked bread makes the home meal a deli[illegible] pleasure to all. She shows [illegible] by giving to her family the most wholesome and strengthening [illegible]

All foods consist substantially of fats, carbohydrates (starches and sugars,) and proteins (white of egg, gluten, lean meats etc.). These three substances sustain, operate, and repair the human body. These are the average percentages contained in seven representative staple foods, as shown by U. S. Department of Agriculture Bulletin No. 142:

	Fats	Carbohydrates	Protein
Wheatflour	1.0	75.1	11.4
Potatoes	0.1	14.7	1.3
Beef, sirloin	16.1	- -	16.5
Butter	85.0	- -	1.0
Milk	4.0	5.0	3.3
Salt codfish	0.4	- -	16.0
Eggs	9.3	- -	13.1

Note the high percentages of proteins and carbohydrates in wheat flour. The butter spread on bread and the shortening used in making biscuits, supply the fat that makes these flour foods the balanced ration.

The ELEVEN TOWNS

H. W. Smith, Editor & Publisher

Entered at the postoffice at Goodridge, Minn. as second class mail matter.

Some admirer of Roosevelt has suggested him as a possible president for our State University. We have had our troubles in the in the past, but Teddy let loose among the youth of the state would be worse than ever. There is altogether too much "hot air" already, and what would it be if we were unfortunate enough to get this "hot air" power station right in our midst.

The Secretary of the Commercial Club at Thief Riuer Falls occupied the attention of the Twin City Reporter for a full page write up in its last week's issue. We are not intimately acquainted with Mr. Laird, but must say it looks decidedly bad. He is the man recommended by brother Cutter, and we have always had our doubts about the latter gentleman's ability to judge character. We understand that there are a few more prominent citizens of the same place who would be accorded equal noteriety if the truth was known.

The head of the American Federation of labor let out a yelp like a whipped dog, when the Presidents message came out in print. No doubt he had good reason, for compulsory arbitration would mean the certain downfall of organized labor, and the loss of his fat job. What would a labor union amount to, if the law said that all grievances must be arbitrated, before a strike could be callee? But then Gompers has no reason to complain. He was strong for Wilson during the last campaign and now he ought to keep silent. Mr. Gompers is old enough to know better than take any chances, but he did, and the result is proper reward.

Congressman Steenerson has taken the first steps to secure some legislation looking to the relief of flood conditions along upper Red Lake River. It certainly is high time that something was done, and public money could hardly be spent in a better manner. Every year millions of dollars are appropriated for the improvement of Rivers and harbors, when in fact it was not meant for that purpose at all. It is part of the Pork Barrel which is generally known to go as reward fo political power and assistance. This improvement is of merit and would benefit a large area, and it is up to every one interested to push the thing with all might. Keep on reminding your Representative and Senators of the fact that you want this thing to go through and you look to them to see that it is done. Tell them of the urgent need of some improvement along the river and do not forget to tell them what will happen if it is not forthcoming.

Nerves Monded With Jelly.

Dr. L. Edinger, a famous nerve specialist of Frankfort, Germany, has devised a method of making nerves that have been severed grow together again. The Scientific American quotes an address delivered by him before the Deutsche Orthopaedische Gesellschaft, in which he described his success with this method, a success that no other has been able to claim. Dr. Edinger fills animal arteries with a special gelatin, cuts away the scarred part of the nerve and inserts the upper and lower ends of the severed nerve into the artery filled with gelatin. The separated ends of the nerve grow together with astonishing rapidity through this gelatin.

More Likely.

Landlady—I'm sorry you think the chicken soup isn't good. I told the cook how to make it. Perhaps she didn't catch the idea. Boarder—No, I think it was the chicken she didn't catch.—London Tit-Bits.

Mortgage Foreclosure Sale.

Default having been made in the payment of the sum of Eleven Hundred One and 67 | 100 ($1101.67) Dollars, which is claimed to be due and is due at the date of this notice upon a certain Mortgage, duly executed and delivered by Peder H. Thoreson and Anna K. Thoreson, his wife, Mortgagors, to Goodridge State Bank, a corporation, Mortgagee, bearing date the 2nd day of December 1914, and with a power of sale therein contained, duly recorded in the office of the Register of Deeds in and for the County of Pennington and State of Minnesota, on the 2nd day of January 1915, at 3:30 o'clock P. M., in Book 7 of Mortgages, on page 561; and no action or proceeding having been instituted, at law or otherwise, to recover the debt secured by said Mortgage or any part thereof;

NOW, THEREFORE, NOTICE IS HEREBY GIVEN, That by virtue of the power of sale contained in siad Mortgage, and pursuant to the statute in such case made and provided, the said Mortgage will be foreclosed by a sale of the premises described in and conveyed by said Mortgage, viz:

The Southwest quarter (SW¼) of Section twenty-three (23), in Township one hundred fifty-three (153) North, of Range forty (40) West of the Fifth Principal Meridian, in Pennington County and State of Minnesota, with the hereditaments and appurtenances; which sale will be made by the Sheriff of said Pennington County at the front door of the Court House, in the city of Thief River Falls in said County and State, on the 3rd day of March 1917, at 10 o'clock A. M., of that day, at public vendue, to the highest bidder for cash to pay said debt of Eleven Hundred One and 67 | 100 Dollars, and interest, and the taxes, if any on said premises, and Fifty Dollars, Attorney's fees, as stipulated in and by said Mortgage in case of foreclosure, and the disbursements allowed by law; subject to redemption at any time within one year from the day of sale, as provided by law.

Dated January 6th A. D. 1917.

Mother's Doll Story

The Sugar Doll

One winter day Jack Frost said to a little sugar doll, "Come on out in the garden, and I will play with you."

Now, the sugar doll was very lonely because she never had any one to play with. All the china dolls and the rag dolls and the kid dolls played together, you see.

So now the sugar doll was delighted with Jack Frost's kind invitation. "Wait till I get on my rubbers," she called back to him through a crack in the nursery window.

Soon as she reached the yard Jack Frost beckoned her around behind the dog house, where the other dolls in the nursery could not see them. Then he shouted, "Run now, for I am going to snow!"

Then beautiful little round damp snowballs began to fall on the sugar doll's coat. She held out her tiny hands to catch some, and then she threw them right at Jack Frost's head.

They had a lovely time snowballing each other till—snap!—the snowballs turned into raindrops. They beat upon the sugar doll's head and her legs till she just ran away in a little puddle that tasted just like sweetened water.

Nest Building.

The first birds to begin to nest are the bald eagle (Florida), the golden eagle (in California), and the great horned owl. These birds begin to nest as early as the first week in January, and the Canada jay the last week in February. So you see the little feathered folks are busy housekeeping during the first five months of the year, as the last bird to sit upon the nest is the American goldfinch, laying its eggs during the second week of June.

Numerical Enigma.

I am composed of 7 letters.
My 4 2 6 is a sack.
My 2 6 7 is a period of time.
My 1 5 3 is a vehicle.
My whole is a vegetable.
Answer.—Cabbage. Words—bag, age, cab.

A Kindly Scout Act.

Mrs. Harpham lives alone in Nemaha county, Neb. The potatoes in her garden would have had to remain there all winter had not a troop of Boy Scouts in the town of Broch done her the good turn of digging them out.

Only Dreaming.

I dreamed I was a butterfly
Flying in the air,
But then I heard the baby cry
In her small high chair.

Then I sailed the ocean blue
And dreamed I was afloat,
But when I opened up my eyes
The bed was my sailboat.

It's lots of fun to dream such dreams,
But if they make you smile
It's best to dream of cake and cream,
And be happy all the while.

NEAL of the NAVY

By WILLIAM HAMILTON OSBORNE

AUTHOR OF "RED MOUSE," "RUNNING FIGHT," "CATSPAW," "BLUE BUCKLE," ETC

COPYRIGHT, 1915, BY WILLIAM HAMILTON OSBORNE

NOVELIZED FROM THE PHOTO PLAY OF THE SAME NAME PRODUCED BY THE PATHE EXCHANGE, INC.

SYNOPSIS.

On the day of the eruption of Mount Pelee Capt. John Hardin of the steamer Princess rescues five-year-old Annette Ilington from an open boat, but is forced to leave behind her father and his companions. Ilington is assaulted by Hernandez and Ponto in a vain attempt to get papers which Ilington has managed to send aboard the Princess with his daughter, papers proving his title to and telling the whereabouts of the lost island of Cinnabar. Ilington's injury causes his mind to become a blank. Thirteen years elapse. Hernandez, now an opium smuggler, with Ponto, Inez, a female accomplice, and the mindless brute that once was Ilington, come to Seaport, where the widow of Captain Hardin is living with her son Neal and Annette Ilington, and plot to steal the papers left to Annette by her father. Neal tries for admission to the Naval academy, but through the treachery of Joey Welcher is defeated by Joey and disgraced. Neal enlists in the navy. Inez sets a trap for Joey and the conspirators get him in their power. Annette discovers that heat applied to the map reveals the location of the lost island. Subsequently in a struggle for its possession the map is torn in three parts, Hernandez, Annette and Neal each securing a portion. Annette sails on the Coronado in search of her father. The crew mutiny, and are overcome by a boarding party from U. S. Destroyer Jackson, led by Neal. In Martinique Annette and Neal are captured and taken to a smugglers' cave to be blown up with dynamite, but are rescued by a sponge diver. Inez forges identification papers for herself as Annette. In an insurrection Neal and Annette are again captured, carried to the Sun City and Annette is offered as a sacrifice to the sun god. They are rescued by marines from the Albany.

NINTH INSTALLMENT

THE YELLOW PERIL

CHAPTER XL.

The Pests of Tortuga.

The commander of the Albany lowered his glasses. He beckoned to Neal Hardin, a gunner on his ship. Neal answered the summons and saluted.

"You may inform your friend Miss Ilington and her party that in half an hour they will be set ashore at Tortuga," he directed.

Neal started off. "One moment," added the commander. "Tell Miss Ilington that I'd like to speak to her."

Neal found Annette and delivered the message—and in a moment Annette was at the commander's side.

"Miss Ilington," said the commander, "without intruding, may I ask the purpose of your extensive peregrination?"

"Peregrination describes it," said Annette laughing, "and you may." She glanced about her—even there—a bit stealthily, and produced her chamois bag, and from it took the map—the old time-worn, yellow, tattered parchment map of the Lost Isle of Cinnibar. The commander glanced at it with interest.

"Hum," he said at length, "no longitude, no latitude."

Annette smiled. "Heat brings out the hidden inscription," she returned, "the latitude is there but you can't see it—so is the longitude. I know it by heart—18 degrees 30 minutes north and 123 degrees 40 minutes west—and there, somehow, I hope to meet my father—and find his quicksilver mines."

Annette Ministers to the Sick.

"Pacific ocean," mused the commander, "off Mexico, Central America—South America—but not far off. There's something in my mind about that locality—what is it? I've heard talk about it somewhere. Something—I can't recall."

He returned the map. "What I desired to say, Miss Ilington," he went on, "is this—if I had my way I'd take you there. But the United States navy has other duties to perform. Our order is Tortuga. We'll see you safe ashore—and if we find the shore isn't safe, we'll see you safe ashore some other place. I am expecting orders daily, to return. Glad to have been of service."

[illegible] hour later Annette and her [illegible] disembarked from one of the [illegible] launches.

Back in the jungle, on the outskirts of the Aztec village of Corazon del Sol, a few days before, three men—accompanied by a native guide or two—had crept through the jungle toward civilization and the shore. On the second day they had reached a railway station, such as it was, and a railroad, such as it was. They found the stationmaster.

"When does the next train go?" demanded Hernandez.

The official yawned. "When she returns from Tortuga, the pestilential—possibly tomorrow afternoon."

Hernandez stamped his foot impatiently.

Hours later from a clump of trees on the outskirts of Tortuga Hernandez, Ponto and Brute peered across the bay.

Suddenly Hernandez clutched Ponto by the arm. "Look," he cried, "they come."

Through the opening in the leaves he pointed toward the wharf. Annette and her little coterie were landing on the wharf.

"Ponto," said Hernandez, "that little wildcat of a girl—she and her smooth-faced sweetheart—they have tricked us long enough. This time they shall not get away."

CHAPTER XLI.

Pestilence.

As Annette's party passed along, single file, up the narrow overgrown shore road, slapping and swatting mosquitoes to their heart's content, they heard a quick step behind them. They turned. An officer closing up their rear, saluted.

He was the ship's surgeon. He strode on with brisk pace. "Let me get ahead there if you please," he said, "there's something that I don't like about this place—I want to have a look."

Scarcely had he said it before a native woman darted out of a tumble-down hut—one of many that fronted on the shore road.

"Madre di Dios," she cried in shrill accents. "Americanos—help—succor. For the love of heaven."

She kneeled by the roadside and as the surgeon swung along, she clasped him by the knees.

"My child—my man child—my only one," she wailed, in the Spanish tongue, "he is at death's door. Help, Senor, senora, senorita—help."

The surgeon lifted the woman to her feet. He spoke soothingly in Spanish to her, and turned and told the others what she said.

"Go on, everybody," he cried, pointing up the road, "let nobody follow me. Go your way."

Annette and her little party proceeded forthwith to the hotel—a flimsy affair, rejoicing in the cognomen of the Inn of the Spanish Don.

Hut after hut the surgeon entered, glancing quizzically into the face of some sufferer—nodding solemnly with pursed-up lips—left tablets and directions, and then went on his way.

Finally he found his way to the center of the town and made an inquiry. He was directed to a somewhat formal looking building.

The surgeon strode on into the house. He found the mayor in his pajamas, smoking a cigar.

The surgeon seated himself and accepted a palmleaf fan. "Sorry," he said, "but your place reeks with yellow fever—you've got an epidemic on your hands—"

Mayor Ramon Carrol started up. "Madre di Dios," he cried, "what—not another one. They will impeach me—it is ruin. Say not so."

The surgeon nodded. "Don't get excited, Senor Carrol," he returned, "fortunately the Albany is in the roadstead. I'll fetch over a hospital force. We'll do what we can. Have you got a piece of paper—I want half a dozen sheets. That's what I came here for."

He got them and went on his way. His way lay past the Inn of the Spanish Don. He stopped.

"Here, Gunner Hardin," he cried, "come out in the road and spray me with this." Neal sprayed him. The surgeon sat down in the hotel office and harangued Annette's party. He harangued them from a distance. "You people," he said, "are in no danger—not even Mrs. Hardin—if you follow my instructions.

"The important thing," went on the surgeon, "is the mosquitoes. It isn't likely the bites you've got have done you any harm. I'll leave you tablets anyhow, to ward the fever off. But I'll do more—I'll have mosquito netting fetched over from the ship and you can sleep under it at night. Now I want help—"

He distributed the sheets of official paper he had obtained from Mayor Ramon Carrol.

"Sit down—all of you—anywhere," he commanded, "and write out what I say. It'll be in Spanish—and it's got to be plain. I'll spell the words so you won't go wrong. Begin."

And then he dictated the warning that was posted that afternoon in all the public places of the town.

NOTICE.

All people are hereby warned that yellow fever is carried by mosquitoes. Avoid being bitten if you can and kill all the mosquitoes you find.

RAMON CARROL, Mayor.

In co-operation with U. S. S. Albany.

"Gunner," he said to Neal, "you're on shore leave, I know. But I'd be glad if you'd buckle to and tack these up in town. I'll go back to the ship and get my squad and a few supplies. Until then good-by."

That afternoon Ramon Carrol, the mayor of Tortuga, stood, now clad in his official uniform, in the middle of his doorway, surrounded by a clamoring mob.

"See, now, my people," he exclaimed, "there is no cause for alarm. See what I am doing for you—what other mayor has done so much? Note the magnificent cruiser—of the United States—the Albanez— I have sent for it—it has come—at my request. Upon that cruiser are the most wonderful specialists in the world—they are among you—see, yonder—see their white coats—here, there, everywhere. Out of my private fortune (which is vast, my children) out of my private fortune I am paying all these specialists. . . ." He sighted suddenly a figure on the outskirts of the crowd. His manner changed. The figure was that of the surgeon of the Albany—he pressed forward and joined the mayor.

"Ah, senor," said the mayor, speaking in a low tone and rapidly, "I have been telling my people—see I have congregate them for the purpose—how noble, beneficent your country is—how you have, free of all charge and without expense—come to our prosperous little community and have fight the pestilence. They are grateful."

The surgeon snorted. "Excuse me for a moment," he exclaimed. He darted down the street and caught a young woman by the arm just as she was entering an adobe hut.

The young woman was Annette Ilington.

"You young renegade," he cried, sternly, "I thought I told you to keep away—hands off—you'll kill yourself."

From inside there came a low moaning sound—a wail.

Annette broke away from the surgeon's grasp. "Gee whiz," he said, "you're strong."

The wail inside turned to speech—quavering Spanish—

"Little white angel," cried the voice, "come, little white angel—and lay your hands on me. Come quick, before I die."

CHAPTER XLII.

Pernicious Plots.

It was after dark. Out of a clump of trees upon a hill there sauntered forth a man—this man was Ponto. He picked his way carefully—warily. Before he knew it he was where he wanted not to be—in the streets of the town. Once in, he started out, but something attracted his attention. A little crowd of men and women stood about a placard tacked upon the side of a hut. Ponto read it swiftly.

Ponto raised his eyebrows significantly. He had heard rumors—this confirmed them.

"Mosquitoes," he said softly to himself, "mosquitoes." He tucked the word mosquitoes back in the inmost recesses of his mind and went his way. Skirting the town he reached the Inn of the Spanish Don. From the rear he spied a figure in a window. He whistled softly.

A woman in the window started slightly, and peered out.

Ponto clambered up to the window and noiselessly tore the net from it, immediately replacing it as best he might. He sniffed the air.

"Ah," whispered Inez Castro softly, "I am smeared with crude oil—face and hands and ankles. I am immune. Here, you smear also, Ponto."

"Where," queried Ponto, "is the map?"

"So far as I determine," answered Inez, "she has it still."

"You cannot get it?"

"Not unless I show my hand," said Inez.

Ponto shook his head. "Not," he returned, "until the chief says the word. What of mine host?" he queried.

"A blood-sucker," answered Inez; he'll do anything for coin."

"Summon him," said Ponto.

The proprietor was summoned. At the door, at sight of Ponto he started back in surprise. But Ponto held his finger on his lips and exhibited a multitude of coins in the open palm of his hand. The proprietor advanced and quickly appropriated the coin.

"More later," whispered Ponto, "sit down—confer with us."

An hour later Ponto—a black patch on the background of black night itself—stealthily pushed open the door of a hut in the middle of a clump of small trees on a hill.

A man inside, waiting suddenly, as suddenly sprang up, knife in hand.

"Soft, capitan," whispered Ponto, "it is but I."

The two men struck a light and sat down facing each other.

Ponto spoke in measured tones—every word that he uttered from now on contained portent. He knew what he was about. At the back of his head he had an idea—baleful but useful.

"Yes," he said, "the mosquitoes carry the pestilence. One might call it the mosquito sickness just as well. And at dusk then is their time—then they bite the worst—"

"Go on," commanded Hernandez, gruffly. He felt that Ponto was holding something back.

"Little White Angel," Whined the Native.

"The little white angel," went on Ponto as though reciting a lesson.

"Eh," cried Hernandez.

"Our young friend of the map—that is what they call her—everywhere. The little white angel. She goes about from hut to hut—from fever-stricken patient to fever-stricken patient—yet she survives But she will answer any call."

He leaned forward. "You understand, capitan," he said, "she will answer any call. Let sickness call to her, she goes."

"Ah," said Hernandez, "that is well. And the gunner—where is he?"

"Everywhere—he, too, will answer any call."

"Um," said Hernandez, "go on—go on."

Ponto's eyes gleamed. "Ah," he said, "one mile out of town—and through this clump of bushes where we sit—down in yonder hollow—"

"Go on," commanded Hernandez. "what lies down in the hollow by this hill?"

Ponto shaded his mouth with his hand. "Whisper," he returned, "whisper. No one—not even he—shall hear."

For a moment he whispered into the ear of Hernandez. When he had finished Hernandez rose to his feet—with glittering eyes.

"It's here," he said, in his turn tapping his forehead. "I have it. By heaven, this time they shall not get away."

CHAPTER XLIII.

Perilous Places.

Ten days later Annette Ilington, now called the little white angel even by the shore squad from the cruiser, felt her skirts plucked by a clutching hand. She looked down. A native—a mere bag of bones in a jumble of rags—crouched at her feet.

"Little white angel," whined the native in Spanish—and Annette had learned enough of the tongue to listen to appeals for help—"my daughter—just like you—so kind, and pretty. She lies at death's door. You have food, you have medicine—and you can lay your hand on her. She will get well. What you have done for others you can do for her."

An officer from the Albany turned the corner. Annette's heart leaped. The man was Neal Hardin.

"Neal," she cried, "listen to him—talk to him for me. Ask him where his daughter is—I'll go unless it's too far."

Neal spoke to the man in his native language. The man jabbered back eloquently.

"Only a short distance out of town," said Neal, "over that hill."

"I'll go," said Annette.

Neal pondered for a moment. "All right," he said, "and I'm free just now. I'll go with you."

The native leaped to his feet with alacrity and ran crookedly ahead of them. Outside of the town they plunged into undergrowth and then through woods—but the ground was dry and the trail was fairly good.

At the door of a hut the native paused and motioned them in.

Neal and Annette entered side by side. In a dark corner was a huddled shape under a filthy cloth. Annette sprang toward it. At that instant the native dropped to the ground and clutched Neal's ankles tightly in each hand. At the same instant the huddled figure in the corner leaped to its feet—it was no stricken girl—it was Hernandez, with the light of triumph in his eyes. And at the same instant Ponto and the brute sprang into the fray.

It was only a matter of a moment before Annette and Neal found themselves bound and lying on the floor.

Neal, after a few gasps for breath, smiled at Annette forlornly.

Hernandez stamped his foot. "I will give you two minutes to produce the map of Lost Isle," he said, "and if it is not then forthcoming. . . ."

He paused. "Go on," said Neal, "what then?"

At the end of two minutes he thrust his watch back into his pocket. He signed to Ponto. "The helmets," he commanded, "and the gloves."

Ponto produced two sets of crudely-fashioned head nets and hand gloves made of mosquito netting. Inez had told him how to make them. Hernandez donned one set and Ponto donned the other.

Neal and Annette, each with a guard of two behind, were forced to leave the hut, and forced down the trail on the farther side of the small hill.

After fifteen minutes' walk they halted. Ponto spoke sharply to the native who was with them.

"Lead on," he commanded; "you know the way."

"Ah," said the native, "I and mighty few beside. Be careful now."

Ponto turned to Hernandez. "This," he said, "is the cause of all the pestilence—this is the quagmire at the bottom of our hill—mosquito swamp—"

"There are not so many mosquitoes here," returned Hernandez, "not enough in fact."

The native grinned. "Not now—but at night—at night they are legion—they are fiends, foul fiends. And they breed pestilence. On. Follow me."

Back at the Inn of the Spanish Don Neal Hardin's mother began to grow restive—Annette had not returned—Neal was nowhere to be seen. Once the surgeon stepped in and inquired for Neal. After that Mrs. Hardin made inquiries of her own. No one knew where he was—no one had seen the little white angel. . . .

Out in the swamp Neal and Annette were conducted to a small, swamp islet, green with dark growth—upon which there was barely foothold.

"This," said the native to Hernandez, "is the place of which I told. From this there is no escape.

Hernandez bowed. "You have chosen pests and pestilence, your friends," he said. "Good-night, and pleasant dreams. Now take us back."

Back at the hut, the native was bowing low. Hernandez poured much coin into his hand. "And mind," said Hernandez, "close mouth for two days at any rate, you dog."

In one way he was close-mouthed. In another way he . . . well, he started for the nearest tavern, and bent his elbow with great frequency and every time he bent his elbow he opened his mouth—and to some purpose . . . after awhile he began to treat—and talk—and show his money. And then, to prove he was an honest man and no thief, like others there, he began to tell just how he had become so very, very rich in such a short space of time . . . they listened to him open mouthed. Among them were men, sober men, whose families had been ministered to by the angel sent from heaven—a little white angel. One of these men suddenly sprang to his feet and grabbed the boaster by the scruff of the neck—and, notwithstanding struggles, carried him, pell mell, from the wine shop. . . .

Back in the Inn of the Spanish Don, the proprietor was protesting that he had not seen Gunner Neal—had not learned of the whereabouts of the little white angel—Senorita Annette Ilington. A dozen bluejackets were on hand—the surgeon was there. Mrs. Hardin, wild-eyed in the glare of the smoky lamps, was sobbing hysterically. Inez looked on calmly. Suddenly into the midst of this company was propelled an intoxicated native—a bag of bones clad in a jumble of rags. Another native pounced upon him and shook him like a terrier shakes a rat.

"This man, senor," said the sober native, "curses on him—he knows where the little white angel is. Come, he will guide us there. Tell them, you dog."

The dog told. He didn't want to, but neither did he like the prick of bayonets through his hide—so he told, and then he led the way. By the time they had reached the outskirts of the town, the whole town was with them.

Hernandez, in his hut, heard the commotion. He knew in his bones what it was. "Come on," he cried to Ponto, "we're going back into that swamp—I swore they should not get away—you swore it, too."

"How will we get there," shivered Ponto.

"The Brute is a brute," said Hernandez, "where he has been once, he can always find the way. Come. Lead on—lead on."

The Brute, under the usual stimulant of cuffs and blows, led on. Ponto followed. At the edge of the swamp, Hernandez, with a wicked smile, dropped silently to one side and crawled behind a clump of bushes.

Out on that fateful islet in the center of the quagmire, Neal, his eyes heavy lidded with sleep, was holding Annette in his arms. She was oblivious. Suddenly he woke her up and sprang to his feet, drawing her with him.

"Someone comes," he whispered. No sooner had he said it than the Brute was upon them. He seized Neal as in a vise. But Neal—a trickster in a wrestling match—wriggled out of his grasp. He seized a heavy stick and lunged at the Brute. The Brute engaged him once again. Ponto tore the stick away from Neal, and whirling it about his head, brought it down with a resounding crack upon Neal's head.

Neal dropped like a log.

Ponto, knowing the reason for haste, turned and looked about him. He was puzzled by Hernandez' silence. But this was no time to wonder. He drew a knife and started toward Annette.

"This time," he cried, "you shall not get away."

Annette ran, crookedly, hysterically, across the small islet. In another instant she was waist deep in the quagmire, and still sinking. Ponto from terra firma, lunged at her with his knife—but his lunge fell short. Annette struggled away—tried to reach some place of safety. But her way was blocked by a waterlogged piece of wood. Against this she rested, wide-eyed, watching Ponto's efforts—sinking, sinking all the time.

For the first time she screamed. The Brute, busy with Neal who lay upon the ground, heard her and swung around. He saw what was happening. Ponto has raised his knife on high. Failing to strike—he was about to hurl it at the girl—and Ponto's aim was perfect.

". . . never get away," snarled Ponto. At that instant the Brute seized a heavy stone in his hand, and hurled it with tremendous force at him. It grazed his head, stunning him. The Brute, grasping in his hand a sapling, leaned far out from the shore of the little islet and with one hand grasped Annette, drew her, dripping from the quagmire and set her on dry land.

He Spied a Figure in a Window.

. . . Behind him he heard shouts. In a frenzy of fear, he seized Ponto's body, slung it over his shoulder, and then, with the instinct of a brute and not a man, he leaped lightly, but surely, from bog to bog, and disappeared along some pathless trail.

Ten minutes later Annette, in the midst of a motley crowd of tars and natives—and in the glare of many torches, was answering Neal's whispered question.

"No, dear," she whispered back, "they didn't get the map. They couldn't get it. Last week I gave it—for safe keeping—to the commander of the Albany."

And then she fainted dead away.

Home Talent Play A Great Success.

The home talent play, entitled, "Those Dreadful Twins" which was staged here Friday evening under the auspices of the Goodridge Literary Society was a great success from every standpoint. The hall was well filled with people anxious for the curtain to rise. The play was a winner from the first to the last act, and kept the audience interested at all times. Much credit is due to those who took part, for the able manner in which they acted their various parts. Mrs. F. C. Peterson also deserves great credit for the able manner in which she coached the members of the play.

The numbers rendered between acts, were greatly appreciated by all present.

After the play was thru Prof. A. O. Halvorson, in a few well chosen words, thanked the people for their liberal patronage, adn explained the purpose for which the proceeds would be used, namely, for the Piano Fund of the Goodridge consolidated schools

The floor was then cleared and a social hop was indulged in.

It is the intention of the members of the play to give it at Grygla and Mavie, in the near future, but nothing definite has yet been decided.

Number of Pouches Received and Sent.

During the past six months, from July 1st 1916 to Jan. 1st 1917 the local postoffice, received 2,844 pouches, of incoming mail, and 2,375 pouches were sent out. During this period the week ending Dec. 23rd. was the record breaker, when 211 pouches were received and 186 sent out. Since the establishment of a postoffice here business has been rapidly on the increase.

Obituary.

We scarcely had time to announce the birth of a baby boy to Mr. and Mrs. Jay Payne that came to gladden their home before we have to extend to them our heartfelt sympathy in their bereavement of the same child.

The child from its birth appeared well and strong seemly doing well, till about 3 A. M. Thursday morning when it was suddenly attacked by some unknown trouble that snuffed out the life in a short time. So is life-today we are here tomorrow we are gone.

The funeral services were held at their home at 10, o'clock A. M. Sunday morning. Rev. Bostrom preached an appropriate sermon from 2nd psalm, 12-13-Isa 11 6, setting forth the fact that this little flower of Human form Divine has been transplanted in the garden of God. The tiny remains were interred in Germantown Cemetery.

Our deepest sympathy goes to the bereaved family in their hour of sorrow.

Another Stock Man for Eastern Pennington County.

Mr. W R. Gates of Fort Atkinson, Wisconsin, was here on Tuesday and Wednesday last week and made a deal for 240 acres of land in Highlanding township owned by M. Lysbakken. This is a good tract of land and the new owner will make it a model stock farm Mr. Gates is a breeder of registered Holstein cattle and intends to ship a carload up here as soon as spring opens. He will make some improvements on the buildings for the present and add to them as requirement warrant Mr. Gates will secure an experienced stock man to place in charge of the farm, as his interests in other places do not permit him taking personal charge.

This is the third stock man who has found the prospects of Eastern Pennington County good enough to warrant an investment of this nature. The value to the community of such enterprise can hardly be estimated. It certainly is a good sign when men of this caliber see fit to buy our land for stockraising purposes. Pennington County has been pointed out as a stockraising and dairying county and it now seems as if this advertising is bearing fruit. We hope that none of these men will be disappointed, for if satisfied with their investment, we can be sure that others will follow. Evey man should do his outmost to see that these enterprises are made a success, fo it means much for the future.

The man who owes everything to his wife seldom pays it back.—Life.

The Public library of Cincinnati makes and lends lantern slides.

s Goodridge Interested In Deepening Ditch 18.

In last week's Thief River Falls papers was a write up stating that the farmers in the Townships of Silverton and North were out in force to fight the proposed Judical Ditch 39, and that a legal talent had been engaged to take every step to block the work. Although we are fully aware how little any legal talent can do in that respect, nevertheless it might not be amiss to call the attention of our village to the same. It is a matter in which we should be deeply interested and steps should be taken to see that the project is not killed or want of support. A delegation shoudl be sent down to push it when the hearing comes off, for a few good backers will mean a lot in a matter of that kind, in fact it will mean more than a crowd of knockers.

This project which is now known as Judicial Ditch No. 39, begins in Beltrami County and runs in a westerly direction joining Ditch no 18 a little northeast of this village Undoubtedly it will be of greatest benefit to the low lands of western Beltrami County, but we must not overlook the fact that we have some low land to the north and east that need better drainage. The plan is to widen and deepen No. 18 so as to give the water a better chance to get away. We are all well aware of the fact that water stands in the large ditch east of here, because Ditch 18 does not provide sufficient outlet The new system would remedy this and be of great value to low lands as well as to the roads. The new plan proposes to run the ditch directly west to Thief River instead of running the water north, as the present outlet of Ditch 18- The slope of the land is to the west and south and the old outlet is therefore run the wrong way, hence the proper fall is lacking. The overflow of the latter ditch last summer is proof that something needs to be done, and the new plan is the only solution. It is conceded that some of our good farmers of Silverton and North may not like it, but the greatest good for the greatest number should govern an undertaking of this kind.

Goodridge is interested as a village, outside of the benefit it might be to the low lands nearby. The deepening of this ditch would give us a better outlet of the drainage from our streets. We would then be in a position to deepen our outlet, without danger of having the water run out of the ditch which will be the case now after a heavy rain. The village officers should therefore take a hand in this matter and push the establishment of this ditch as far as possible.

YOUR LAST CHANCE.

Recently we published in these columns an offer of The Youths Companion and McCall's Magazine, both for a full year, for only $2 10, including a McCall Dress Pattern. The high price of paper and ink has obliged McCall's Magazine to raise their subscription price February 1st to 10 cents a copy and 75 cents a year—so that the offer at the above price must be withdrawn.

Until march 31st our readers have the privilege of ordering both publications for a full year, including the choice of any 15-cent McCall Dress Pattern, for only $2.10.

The amount of reading, information and entertainment contained in the fifty-two issues of The Youth's Companion and the value of twelve monthly fashion numbers of McCall's at $2 10 offer a real bargain to every reader of this paper.

This two-at-one price offer includes:

1. The Youth's Companion—52 issues.
2. The Companion Home Calender for 1917.
3. McCall's Magazine—12 fashion numbers.
4. One 15-cent McCall Dress Pattern—your choice from your first copy of McCall's—if you send a two-cent stamp with your selection.

GIRL CONDUCTORS

Twelve Hundred Are Now Employed In London.

THEIR WORK IS HEALTHFUL.

Benefit In Physique and Complexion by Open Air Life—All Under Care of Lady Doctor—Their Average Earnings Run to About $10 a Week, Every Class Represented.

London.—Twelve hundred girls are employed as London bus conductors, and more are wanted. All sorts of inducements are offered to them, including the assurance that the work is healthy and even patriotic.

The manager of the London General Omnibus company says:

"We have had to contradict several reports that the girls on our busses are unable to stand the strain of the work and that in consequence they are leaving our employ.

"Every week we put on about eighty new conductresses and would increase the number if we could. We can deal with hundrds more at once.

GIRL BUS CONDUCTOR.

"Each pupil receives not only free tuition for a period of two or three weeks, but is paid 50 cents a day for her time After they have qualified the average earnings run to about $10 a week.

"There is no abnormal sickness among the girls. They like the work and benefit in physique and complexion by the open air life. They are all under the care of a lady doctor.

"Since March we have interviewed 16,000 applicants and are very careful in our selection Among our ranks almost every class is represented. Quite 10 per cent of the girls have never worked before and take up the work from purely patriotic motives. There is not the slightest reason to suppose that they will be unable to stand the work during the winter, and 'stair work' is not so trying as the public imagines."

WANTS NOISELESS ENGINES.

Hissing Locomotives Disturb Rest In Oakland, Pa.

Pittsburgh.—Oakland, the acropolis of Pittsburgh, with its great halls of art and learning, is marred by a nuisance worse by far than the venders whose presence desecrated the Coliseum in Rome or the Rialto bridge in Venice, according to members of the Oakland board of trade. This nuisance is declared to be the night long and day long hissing and fuming of locomotives. This, John Dimling, a member of the board, pointed out, is not only detrimental to Oakland as a center of art, but it robs mortals, both artists and business men, of their sleep.

Mr. Dimling in an impassioned speech told of locomotives, huge monsters, which seemed to take a demoniacal delight in standing for hours spouting infernal fumes and hissing fiendishly through their pop valves. Repeated protests to the railroad company, he said, were of no avail. A committee was directed to ask the courts to grant an injunction against the railroad company similar to the one granted some years ago by the supreme court to a Junction Hollow resident now dead.

Lost Days.

"You used to say," she complained, "that you counted that day lost when you did not hear the sound of my voice."

"Yes; I know," he replied, "and I shall never cease to long for those dear

PLANS LONG FLIGHT

Miss Law Will Try to Soar Across Continent.

START FROM SAN FRANCISCO.

Will Ask Aero Club of America to Time Her—Estimates Trip Will Take Thirty Hours' Flying Time—She Will Be Sole Occupant of Machine, Which Can Carry Two Passengers.

New York.—From San Francisco to New York by aeroplane—that is the latest ambition of Miss Ruth Law. She announced she had accepted the offer of the president of an aeroplane company to build for her a new type of machine especially for long distance flying.

"I will make the flight under my own auspices, just as I did the trip from Chicago," Miss Law said. "The Aero Club of America probably will time me, but I will be in complete charge of all the arrangements. I estimate the trip will take thirty hours' flying time.

MISS LAW LANDING AFTER FLIGHT.

"This new machine will carry ten hours' fuel supply, will be capable of a sustained speed of more than 100 miles an hour and will be practical for the business man who must make a hurried trip to Chicago or elsewhere and doesn't find it convenient to wait for a train."

Miss Law, who established an American cross country record of 590 miles by the recent trip from Chicago to New York, left for Buffalo to supervise the construction of the machine. The first tryout will be given within a month and the transcontinental journey will follow soon afterward.

The avatrix believes that reliability and safety are more important factors in popularizing air travel than speed. Consequently she will attempt to see that these elements are contained in the new flier. It will carry two passengers, but Miss Law will be the sole occupant on the coast to coast trip.

The plucky bird woman's last spectacular appearance was when she flew over the statue of Liberty on Dec. 2, when the lighting system built by popular subscriptions was dedicated. She rode in an illuminated aeroplane which left a comet-like tail of fire behind it.

VOTED ILLEGALLY 52 YEARS.

Man Who Thought He Was a Citizen Naturalized at Last.

Denver.—James Lockart, a rancher near Ordway, Colo., was granted naturalization papers in the United States district court here after exercising all the rights of citizenship for fifty-two years. Lockhart, a native of Ireland assumed that he was a citizen because of naturalization papers believed to have been issued to his father before his son had reached his majority. He has voted at every presidential election since the civil war, of which he is a veteran; held a commission in the United States army, served as a delegate to the Republican national convention; served as sheriff of Gibson county, Ind., and has taken an active part in politics for many years.

The question of his citizenship arose when he filed on government land in southern Colorado and it was learned

THE HOUSEWIFE'S PRIDE

The housewife who serves pure, home-baked [illegible] the home meal a del[illegible] pleasure to all. She shows [illegible] pride by giving to her family [illegible] wholesome and strengthening [illegible]

All foods consist substantially of fats, carbohydrates (starches and sugars,) and proteins (white of egg, gluten, lean meats etc.). These three substances sustain, operate, and repair the human body. These are the average percentages contained in seven representative staple foods, as shown by U. S. Department of Agriculture Bulletin No. 142:

	Fats	Carbohydrates	Protein
Wheat flour	1.0	75.1	11.4
Potatoes	0.1	14.7	1.8
Beef, sirloin	16.1	- -	16.5
Butter	85.0	- -	1.0
Milk	4.0	5.0	3.3
Salt codfish	0.4	- -	16.0
Eggs	9.3	- -	13.1

Note the high percentages of proteins and carbohydrates in wheat flour. The butter spread on bread and the shortening used in making biscuits, supply the fat that makes these flour foods the balanced ration.

The ELEVEN TOWNS

H. W. Smith, Editor & Publisher

Entered at the postoffice at Goodridge, Minn. as second class mail matter.

It is rumored that Thief River Falls if going to have another clean up. In other words a professional buyer of "booze" is on the job again. Wonder if this one will find the pigs as blind as last year. Delaney collided with a bunch of them about this time a year ago.

"Civilization". Did you see the full page adds? Do you know what it means? Did you see the play or picture? The editor saw the adds but not the play. No thanks, the adds were enough. The hoof prints of the army and Navy League were too plainly visible. More money for the army and navy, especially the navy. That is what it means. Scare the people into hysterics about our inadequate defense. Get them to clamor for more protection. Preparedness, that is it. The Steel Trust must sell more armor plate and the Shipbuilding trust needs more boodle. Build a battleship at a cost of $10,000,000, which should cost $5,000,000. Send it out to get a torpedo in its vitals and down goes your $10,000,000 monster, but not the profit. Oh no, some one is having a high old time on that, while simps dig for more we money to build another $20,000,000 junk pile. Undoubtedly the promoters make a fine thing out of "Civilization" outside of the door receipts, but where do you and I come in?

The State of Kansas has a printing and publishing plant of its own and the saving in five years as compared to the old system is approximately $300,000. Not a bad argument for state ownership. Why not have our own state establish a similar plant? The saving to the state would be at least $100,000 annualls. As pointed out in a report of the Public Printer of Kansas, it tends towards economy in the use of supplies for the reason that no one gets any profit out of the sale, and there is no chance that state officials can line their own pockets by commissions received on purchases made at exhorbitant prices, which is often the case under the present system. You remember that some years back there was an expose of the methods of our own legislature in this respect. Several thousand dollars worth of pocket knives, rubber bands, pencils etc. were some of the expense items. It is doubtful if any of these articles were really necessary, but then some one had a political debt to pay. and the taxpayers were called upon in this way. With a state owned printing and publishing plant the incentive to that kind of graft would be lacking and the saving would be an item of no mean proportion.

In Kansas they have also gone into the publishing of school books and selling them at actual cost to the public. The result is that common school books can be had at something like 40 per cent of the old prices. The school book trust is doing its utmost to throttle the venture but the people are solid behind it, and will not allow a return to the old way even if the legislature could be persuaded.

A few weeks ago many of the newspapers in the state came out strongly for a state owned paper mill. Why not take a full step in that direction and make it a state owned printing plant also. Now, brothers, speak up.

"What became of that tenderfoot who said he didn't know how to play poker?" asked Broncho Bob.

"Lynched," replied Piute Pete.

"For winnin'?"

"No; for lyin'."

Mortgage Foreclosure Sale.

Default having been made in the payment of the sum of Eleven Hundred One and 67 | 100 ($1101.67) Dollars, which is claimed to be due and is due at the date of this notice upon a certain Mortgage, duly executed and delivered by Peder H. Thoreson and Anna K. Thoreson, his wife, Mortgagors, to Goodridge State Bank, a corporation, Mortgagee, bearing date the 2nd day of December 1914, and with a power of sale therein contained, duly recorded in the office of the Register of Deeds in and for the County of Pennington and State of Minnesota, on the 2nd day of January 1915, at 3:30 o'clock P. M., in Book 7 of Mortgages, on page 561; and no action or proceeding having been instituted, at law or otherwise, to recover the debt secured by said Mortgage or any part thereof;

NOW, THEREFORE, NOTICE IS HEREBY GIVEN, That by virtue of the power of sale contained in siad Mortgage, and pursuant to the statute in such case made and provided, the said Mortgage will be foreclosed by a sale of the premises described in and conveyed by said Mortgage, viz:

The Southwest quarter (SW¼) of Section twenty-three (23), in Township one hundred fifty-three (153) North, of Range forty (40) West of the Fifth Principal Meridian, in Pennington County and State of Minnesota, with the hereditaments and appurtenances; which sale will be made by the Sheriff of said Pennington County at the front door of the Court House, in the city of Thief River Falls in said County and State, on the 3rd day of March 1917, at 10 o'clock A. M., of that day, at public vendue, to the highest bidder for cash to pay said debt of Eleven Hundred, One and 67 | 100 Dollars. and interest, and the taxes, if any on said premises, and Fifty Dollars, Attorney's fees, as stipulated in and by said Mortgage in case of foreclosure, and the disbursements allowed by law; subject to redemption at any time within one year from the day of sale, as provided by law.

Dated January 6th A. D. 1917.

Finds Dime In Fish's Gill.

Wichita, Kan.—W. E. Smith was recently fishing in the Little Arkansas just below the Central street dam and landed a big channel catfish weighing one and a half pounds. The catch was a beauty, and Mr. Smith hurried to extract the hook from its mouth. As he ran his finger through the fish's left gill he found something metallic and upon extracting it found it to be a bright shiny ten cent piece.

Home Cookery

Curried Rice With Chicken.

Cook the chicken as for an ordinary stew. Boil the rice in salted water; then proceed as follows to make the curry powder sauce: A cupful of chicken stock (broth), a tablespoonful of flour, a teaspoonful of curry powder. (If the family be large the stock and ingredients must be used in accordance.) Rub smooth the butter and flour. Bring the stock to the boiling point, add the flour paste and cook until the gravy thickens, stirring constantly. Stir the curry powder into a little of the cold stock, then add to the gravy, stirring well. Arrange the chicken in a heap in the center of a deep platter, surround it with the hot rice and pour the gravy over all. Serve very hot.

Savory Calf's Tongue.

Skin a medium sized calf's tongue carefully and cut it into slices about a third of an inch thick and boil for seven minutes in slightly salted water, says the Country Gentleman. Put four slices of rather fat bacon into a stewpan and fry with it a sliced onion. When the onion has slightly browned put in the slices of tongue, season with herbs, chopped capers, lemon juice, chopped parsley and salt and pepper to taste. Pour in a cupful and a half of brown stock, cover and cook gently for thirty minutes. Serve hot in a border of mashed potatoes.

Macaroni With Bacon.

Cut three or four slices of bacon in dice and fry, cooking with it a small onion, sliced. When well browned stir in two tablespoonfuls of flour and cook till frothy. Add to this a cupful and a half of tomato, stewed, seasoned and passed through a sieve. Let simmer until onion and bacon are tender. Cook three-fourths of a cupful of macaroni till tender, rinse in cold water, drain and add to the tomato. Let all heat together; then stir in with a fork two or three tablespoonfuls of grated cheese and serve hot.

Baked Sliced Ham.

Two pounds of sliced ham, two teaspoonfuls of minced onion, two teaspoonfuls of minced parsley, the juice of half a lemon to each slice of ham. Slice the ham half an inch thick, remove fat nearly to the lean and chop it fine. Mince the onion and parsley, mix with the fat and spread over the ham, which should be put into a dripping pan. Squeeze over the ham the lemon juice and bake till tender in a moderate oven from thirty to forty minutes. Make a gravy from the drippings in the pan.

Rice Pudding With Ginger.

Cook the rice until well done; add sugar to taste, one large tablespoonful of butter, a dash of nutmeg and two tablespoonfuls of preserved ginger cut into small pieces. Each cupful of rice will require one quart of sweet milk. Mix all together thoroughly and bake in a moderate oven until thick and creamy. Serve either hot or cold.

A Well Spent Day

If you sit down at set of sun
And count the acts that you have done
And, counting, find
One self-denying act, one word
That eased the heart of him who heard,
One glance most kind
That fell like sunshine where it went,
Then you may count that day well spent

But, if through all the livelong day
You've cheered no heart by yea or nay,
If through it all
You've nothing done that you can trace
That brought the sunshine to one face,
No act most small
That helped some soul and nothing cost
Then count that day as worse than lost.

When Dick Came Home

He Discovers His Mistake.

By CLARISSA MACKIE

Dr. Mansfield stood in the doorway and beamed kindly upon the merry dancers who were tripping over the polished floor. It was Ella's birthday, and this dance given by the doctor for his adopted daughter had been talked about in Shropton for many weeks beforehand. Ella herself, tall and fair, with restless blue eyes that seemed always seeking Dick Allen when he was not beside her, was dancing with Frank Miller. Frank would gladly have married the doctor's pretty daughter, but every one knew that she was only waiting for Dick Allen to make up his mind.

Her roving eyes saw Beth Page smiling up at Dick's downbent face. The two were standing together—Dick so tall and Beth so tiny and so very charming in spite of her cheap, homemade dancing frock, which had cost twenty times less than Ella's rose pink crape.

Beth was saying something now in her frank, open manner. "You haven't danced once with Ella, and it is her party, Dick."

"I'm going now," he said guiltily "Save another one for me, Beth."

"You've had your share," she retorted as he moved away.

Ella greeted him with a haughty tilt of her chin, and when he asked her to dance she shook her head. "You are too late, Dick," she said coldly; although her voice was very near to tears.

"Then you will talk with me until some one comes and takes you away?" he urged, for now he was under the magic sway of her beauty.

"I cannot, but I have the supper dance. I saved it for you, Dick," she cried hastily.

"For me? Oh, you have honored me!" he cried contritely And he was so remorseful that he would not go near Beth until after supper.

Dr. Mansfield, watching his young people, saw Ella's unhappy face and wished in his blundering way that he could help matters along. He liked Dick and would gladly have welcomed him into the family. He wondered why Dick was holding back the important question.

Dick himself was wondering that while he danced the supper dance with Ella and afterward led her into the dining room, where supper was spread at a great round table with many little flanking tables.

The birthday cake was placed before Ella, and when the time came she was to cut it.

"There is a ring in it and a thimble and a coin," she told Dick.

"A ring? What does that signify?" he asked carelessly.

"Oh, a wedding for the lucky finder."

"And the coin?"

"Riches."

"And the thimble?"

"Spinsterhood—alas!" she sighed.

Now Ella was cutting the cake There was much laughter and gay chatter. Dick noticed that she watched the slices closely as they fell beneath the silver knife.

He saw the ring in its twisted waxed paper plainly imbedded in the cake Ella saw it too. The silver knife poised, trembled and then went swiftly over to the other side of the loaf and began to cut.

Dick felt dizzy for a moment, and then he was glad that he had seen it in time.

Ella had cheated. She had seen the ring and was saving it for herself All the while Dick was shocked he was thinking that Beth Page never would have done such a thing. Beth would have taken whatever Dick came along and gone blithely on her way.

"What is the matter?" Ella's voice broke through the gale of merriment about him.

"Why—why—nothing," he stammered.

"Why don't you look happy?" asked Ella. "Don't you see what has happened?"

Dick looked at the bit of waxed paper in one of her hands and the sparkling sapphire ring on her right hand.

"I drew the ring!" she exclaimed.

"You drew the ring," he repeated stupidly.

"And Frank Miller drew the coin. Frank will be rich."

"And the thimble?" he asked, not because he cared, but because he was trying to readjust his thoughts. Ella had cheated, and he had thought he loved her.

Now he felt only contempt for her and pity.

"The thimble," she was saying carelessly. "Oh, Beth Page drew the thimble! Isn't it odd that she should draw the symbol of spinsterhood just when she is going to marry Frank Miller? At least that is what every one says."

The next day Dick went away A good opening had been waiting for him in a nearby city, and he had delayed accepting it because he had been playing with Love. And now that Love had flouted him he was going away where amid new scenes he might forget. Ella had proved herself a cheat and Beth was going to marry another man.

When Dick went away from Shropton he did not know that ten years would elapse before he again set eyes on its green loveliness, with the river winding like a silver ribbon through the daisied meadows.

It was summer time when Dick came back to occupy the big house that his Uncle Jeffrey had left to him with a great deal of money. Dick had been very successful and had made much money for himself as well, so he planned many changes in the fine old mansion which during Uncle Jeffrey's hermit-like existence had been greatly neglected. Mrs. Phipps, the housekeeper he had brought from town with him, was having all the carpets and rugs renovated and the lace curtains, which had been laid away in cedar chests and closets, aired and mended.

Once he came upon a group of children playing in his orchard. They scattered at sight of him, and he was sorry, for Dick was fond of children. The littlest one of all, a fair haired laddie of four, he caught and swung high in the air.

"What is your name, young man?" he asked.

"Frankie Miller," lisped the child.

"And my name's Beth Miller," put in a fat little girl.

Dick gave them some money and watched them scamper away through the hedge.

So these were Beth's children! He guessed that from their names, although the name of Miller was common enough in Shropton.

At dinner that night Mrs. Phipps told him that the housecleaning would soon be completed and the entire house ready for occupancy.

"All but the lace curtains, Mr. Allen. Some of them need mending, and I have had a great deal of trouble in finding some one who can do the work properly. But there is a young woman coming tomorrow to help me. She does very fine sewing for the ladies of the village."

"Very well," said Dick, "and when everything is ready, Mrs. Phipps, you should take a few days off to visit your sister. You have been working very hard."

"Thank you, Mr. Allen," said the housekeeper as she withdrew. "You are always so thoughtful and kind."

"I wish I had more people to be kind to," smiled Dick wryly as he finished his dinner. "I'm a lonesome beggar, and no mistake."

The next day he drove his little runabout over to the next town to attend to some business matters, and it was late afternoon when he returned home.

The house was very still when he entered it. He decided that Mrs. Phipps was taking her daily nap, and he had forgotten all about the sewing woman who was to come until he entered the big blue room and saw her sitting there in the sunshine surrounded by billows of filmy laces, while Mrs. Phipps sewed in another window

"Oh, Mr. Allen!" Mrs. Phipps bustled forward. "Were you looking for me?"

"No, I came in to get some matches," he confessed. "You are getting along famously, I see." He wished that ruddy brown head would turn toward him. He wondered what the face beneath it could be like.

"This is Miss Page, the young lady who is mending the curtains," fluttered Mrs. Phipps at last when she found that Dick would not go.

Now the girl turned and looked up at him with Beth Page's warm brown eyes and her frank smile.

"I was wondering if it was the Mr. Allen I used to know," she said demurely.

Dick was wringing her little hand in his with unconscious energy.

"Miss Page?" he repeated amazedly.

"Why, yes," she replied, blushing.

"You'll think me rude, but I thought you married Frank Miller," he said bluntly.

"Impossible. He married Ella Mansfield."

Dick checked a sharp exclamation and, turning on his heel, left the room and went into the garden.

His mind was in chaos.

All the beliefs he had harbored for years had proved to be false. But he could trace the falseness back to Ella Mansfield, who on her birthday night had shown herself to be a cheat. Ella had told him that Frank and Beth were engaged, and he had gone away and had not troubled to come back except for brief visits to Uncle Jeffrey, who never knew any of the village gossip. And the children who had played in his orchard were Ella's children and not Beth's Beth was still unmarried and sewing for her living She had been in his house mending his curtains in the house where she should reign as mistress.

Suddenly his pulses leaped Why not now? It was not too late It is never too late when the girl one loves is unmarried He couldn't ask her here in his own house He must go to her home.

So he went away to the city for a week just because it was tantalizing with Beth so near him, and he bought a wonderful diamond ring

When he came home again the curtains were all hanging at the windows, and the house looked like home. So he astonished Mrs. Phipps by kissing her atop her gray head and got into his little motorcar and sped away toward Honeysuckle road where Beth lived with her uncle and aunt

"Beth, the moon is shining over the river and the whippoorwills are singing. Will you come with me?" was what he said when he met her at the door.

"Dear me, how abrupt you are, sir!" he laughed. "Yes, if you please, kind sir," she added

And she said exactly the same words when an hour later he asked her a certain question and [illegible] slipped the [illegible] on her slim [illegible] finger.

NEAL of the NAVY

By WILLIAM HAMILTON OSBORNE

NOVELIZED FROM THE PHOTO PLAY OF THE SAME NAME PRODUCED BY THE PATHE EXCHANGE, INC.

COPYRIGHT, 1915, BY WILLIAM HAMILTON OSBORNE

SYNOPSIS.

On the day of the eruption of Mount Pelee Capt. John Hardin of the steamer Princess rescues five-year-old Annette Ilington from an open boat, but is forced to leave behind her father and his companions. Ilington is assaulted by Hernandez and Ponto in a vain attempt to get papers which Ilington has managed to send aboard the Princess with his daughter, papers proving his title to and telling the whereabouts of the lost island of Cinnabar. Ilington's injury causes his mind to become a blank. Thirteen years elapse. Hernandez, now an opium smuggler, with Ponto, Inez, a female accomplice, and the mindless brute that once was Ilington, come to Seaport, where the widow of Captain Hardin is living with her son Neal and Annette Ilington, and plot to steal the papers left to Annette by her father. Neal tries for admission to the Naval academy, but through the treachery of Joey Welcher is defeated by Joey and disgraced. Neal enlists in the navy. Inez sets a trap for Joey and the conspirators get him in their power. Annette discovers that heat applied to the map reveals the location of the lost island. In a struggle for possession of the map Hernandez, Annette and Neal each secure a portion. Annette sails on the Coronado in search of her father. The crew mutiny, and are overcome by a boarding party from U. S. Destroyer Jackson, led by Neal. In Martinique Annette and Neal are captured, but are rescued by a sponge diver. Inez forges identification papers for herself as Annette. In an insurrection Neal and Annette are again captured, carried to the Sun City and Annette is offered as a sacrifice to the sun god. They are rescued by marines from the Albany. Landed in Tortuga Annette and Neal are captured and exposed to yellow fever infection by Hernandez, but are rescued by sailors from the Albany.

TENTH INSTALLMENT

THE ROLLING TERROR

CHAPTER XLIV.

Across Country.

Early next morning, out of that pathless mire, strode back the Brute, picking his perilous way with the instinct of some cunning, cautious animal and guiding—in fact, bearing on his shoulders half the time—the luckless Ponto. That individual, his ugliness enhanced by the clotted blood that dressed his disheveled hair, and decorated his countenance, was still dazed. He had vague recollections as to what had happened. He knew that at the command of Hernandez, his side partner in crime, he had plunged once more into the deadly morass for the purpose of finishing by violence the deed that had commenced in cunning. He had followed the Brute—he remembered that.

He dozed off into satisfaction.

He woke with a jolt. It was a heavy jolt. When his eyes opened he was on the ground, supine. He started to leap to his feet, then sank back again, heavy with the pain of his wound.

A laugh behind him startled him and brought him to his senses. He turned swiftly, feeling for his knife—the knife that wasn't there.

There was another laugh—the laugh of his side partner, Hernandez.

"Fool," said Hernandez, addressing Ponto.

Ponto changed his demeanor. He drew himself up to his squatty height and folded his arms.

"Did I not as you said?" replied Ponto. "I went into that hell and I fixed them both—I did it single-handed—I, Ponto."

His answer was a sneer. Hernandez stretched forth a hand and clutched Ponto by the shoulder.

He dragged his lieutenant to the edge of the clump of trees and underbrush, where they were standing. He parted the branches of a tree. He handed Ponto a pair of binoculars.

"Take one swift look, my Ponto," he sneered, "only one."

Ponto took more than one—he held his eyes glued to the glasses. Then he fell back in amazement.

"They live!" he cried. "Both of them!"

He glared at Hernandez almost in affright. "What does it mean?" he repeated.

"It means," said Hernandez, grimly, "that I sent a boy to do a man's job. You were quite right. I should have gone myself."

Down on the wharf Annette Ilington and her party were about to embark in one of the launches of the cruiser Albany that lay still anchored in the harbor. In Annette's party were Mademoiselle Irene Courtier, Mrs. Hardin, Neal's mother; Neal Hardin himself, a warrant officer upon the Albany, and the surgeon of the cruiser. There were one or two other men in uniform, an assistant surgeon possibly, and an ensign. There were bluejackets.

But above all, there were natives galore. Natives by the dozens, by the hundreds, and all in rags. The whole village had turned out to do homage.

"The little white angel," murmured grateful mothers, sinking down in Annette's path and kissing her dress as she went by.

Unseen by any of the party—save by Joe Welcher—Inez swerved aside and slipped a note into the hands of a native, and handed him a coin. Then she leaped lightly into the launch and the launch steamed away, followed by the cheers and the tears of the Tortugans on the wharf.

Back in the jungle three men waited for advice. They had not long to wait. A treacherous looking native slipped through the undergrowth and advanced swiftly toward Hernandez.

"The epistle, Senor Capitan," he said. It was the note from Inez Castro. Hernandez seized it eagerly and read:

"We are bound for La Plaza. Meet me there. Meantime I shall do my best to secure Annette's precious locket and the map. Your route lies across the country. Adios. I. C."

CHAPTER XLV.

Inez Shows Her Hand.

"First and foremost, Miss Ilington," said the captain of the Albany after Annette's party had boarded the cruiser, "now that you are once more safe, permit me to return to you the map of the Lost Isle, which I have examined with interest. Following your directions, I subjected it to heat, and I brought out the hidden latitude and longitude—18 degrees 30 minutes north and 123 degrees and 40 minutes west." He paused a moment. "Do you know," he said, "there's something about that location that sticks in my mind—some vague rumor."

"The isle contains quicksilver mines," said Annette.

"It's not that," returned the commander, "it was merely the locality. I traced it on our map. It was about there that the government—" He broke off, checking himself quickly. "Ah, yes, I remember now," he said, "well, never mind. But, here also is your locket. Now you've got them, have you—all safe."

"Thanks for keeping them safe," said Annette, secreting them in the bosom of her dress.

"So far, so good," went on the captain. "I have to say further that the officers' quarters have been placed at your disposal until we reach La Plaza. There you can get a train.

"It's a short ride on that road to Chantillo," went on the captain, "and at Chantillo you can catch the boat for most of the Lower California and California ports."

Across country Hernandez, Ponto and the Brute were traveling hard. The indomitable will of Hernandez kept them ever going on and on.

"You understand," cried he, "we must make La Plaza before the Albany gets there. We go cross-country—she goes by shore. I'll knife you both if you fail me at this time."

Finally, on a moonlight night, Hernandez halted at a forest opening that looked down toward shore. He glanced across the sea.

"It is she—the Albany," he cried; "look, Ponto. She is at hand. It is a matter of hours now, one would say rather than days."

After a rest he reconnoitered. In the valley he saw a light or two filtering through the foliage. Again they mounted and descended the hill into civilization. They knocked on the door of an adobe hut. A native opened and shambled out, gun in hand, to meet them. Seeing the Brute, he drew back in terror.

The Hand of Inez Was Quicker Than Annette's Voice.

"It is nothing, friend," said Hernandez. "Here is a coin. Where lies La Plaza?"

"But five miles farther on—close by shore," returned the native.

"A bagatelle," said Hernandez "come on."

Meantime Inez Castro, on board the Albany had become unusually active. She had ascertained the time of arrival of the Albany at La Plaza—the schedule time.

Joe Welcher bunked in with Neal—in the quarters of the warrant officers. It was nearly evening when Inez Castro, using Joe as usual to do her bidding, whispered in his ear.

Joe, like a whipped dog, did, through fear of her what he otherwise would have been afraid to do. He slipped into Neal's quarters, and laid his hands upon an object or two, twisted them into a little bundle and took them back to Inez. Inez took them to her cabin.

Over at La Plaza—La Plaza by the Sea—Hernandez sought the shore and found what he wanted—it was a fishing boat with a kicker in it—the only motorboat in the place. It was well manned, with a crew of six of the most disreputable-looking characters that ever drew the breath of life. Hernandez talked to them—with money.

"No lights," he cautioned, "and muffle that kicker. And be quick about it now."

"It is all right, senor," said the man at the tiller; "we are about all hours of the night. No one thinks of us, one way or the other." He pointed out to sea. "You perceive," he said, "there are other fisher boats."

"Good," said Hernandez, "the more the merrier."

Without lights they kicked to within almost hailing distance of the Albany. Then Hernandez showed a light. It was immediately answered from the deck. "It is good," he said, "we understand each other."

Inez hastened from the deck and entered her cabin.

Her cabin was Annette's as well. Her plans well laid—and she had felt they were the only plans to make—she retired for the night, but not to sleep.

At three o'clock she rose, and untwisted the bundle that Joe had filched for her. She sighed with satisfaction as she shook it out of its folds. It was a uniform—one of Neal's. She donned it swiftly—hurriedly—silently. There was no light in the cabin, save the moon, sifting in through port holes. Annette's face was bathed in light. But Annette was fast asleep.

She was totally oblivious to the presence of the prowling figure in male uniform who stole near and ever nearer—who now groped about her neck. . . .

Suddenly, with one quick and final tug Inez wrenched at the chamois bag. . . .

Annette woke with a scream upon her lips. But the hand of Inez was quicker than Annette's voice. Inez's hand closed over Annette—her knee crushed down her breast.

The wildcat in Annette rose. She was a fine fighter. She squirmed with one twist out of the grasp of this unseen foe, and grappled with her assailant. Inez was no match for her, and soon found it out. . . .

Annette dragged her to the ray of moonlight and looked at her.

She gasped and dropped her hold.

"You—Irene Courtier," she cried.

But Irene—Inez Castro if you please—was no longer there. In that instant—and that was the instant for the last few seconds she had waited for—in that instant she had leaped to her feet and made her getaway.

And Inez knew the Albany—every part of that huge battleship she had studied with the care of an engineer. She knew just what to do and where to go, and how to elude pursuit. She rushed to one spot where safety lay, reached the rail, leaped over it, and with the agility of a professional diver struck the water with scarcely a splash.

"Now," said Hernandez to his helmsman, "like mad for that spot of white."

Inez, fresh and supple notwithstanding her struggle—in fact the struggle had nerved her up—swam toward the fishing boat and the boat steamed toward her. Within a short time—almost less time than it takes to tell it—Ponto was once more kicking the Brute. And the Brute in turn leaned over the side of the kicker, and with the sweep of one powerful hand and arm, drew a dripping object from the water. It was Inez, gasping for breath.

"Now like the devil for the shore," whispered Hernandez.

They obeyed. But if Inez now gasped for breath, Annette had ceased to gasp for breath. Her first coherent thought was to feel for her chamois bag. It was safe. Her next effort was speech. She screamed at the top of her lungs. Her third was action. She darted to the deck and gave the alarm.

Within a moment a launch was manned and had put off from the cruiser—Neal in command.

Suddenly one of Neal's men pointed toward the shore. The searchlight of the cruiser was playing upon a kicker making full speed south.

"That's our boat," said Neal, "like the devil now."

In five minutes they caught her. Neal saw at a glance she showed no lights. It convinced him. Without a word he swung his launch alongside and his men leaped across the gunwale. Every jack tar either had his man by the throat, or was tickling his ribs with a knife.

"We've got em all," said somebody.

"Where's the woman?" queried Neal.

But there was no woman—no Inez Castro. What's more there was no Hernandez, no Ponto, no Brute.

"No use," said Neal, "the birds have flown. No use chasing them," he conceded, "when those birds fly, they fly. We've got to give 'em credit."

"Annette," he told that young lady later. "I think now we're safe. The job all along has been an inside job—Irene Courtier has been handing you—yes and me—over to the enemy. That was the game—and the game is ended. That's the way it looks to me."

CHAPTER XLVI.

A Hold-Up.

The captain of the cruiser Albany had his men scour the country round about, but—as had ever been the case with Hernandez and his nimble-footed crew—without result.

"At any rate," he said, "the rascals have run away—they're probably down in their boats for all time. You go to Chantillo, Miss Ilington. You'll take that one-horse train here—we'll escort you to the train. Over at Chantillo lies the Missouri, a first-class battleship. I'll give you a note to her commander. He'll see you safe on board the South California boat."

Neal and a small guard of marines constituted Annette's escort.

Annette laughed when she saw the station—laughed more when she saw the train. It consisted of the sorriest engine she had ever seen—also the most diminutive and battered coach.

"Look here," said Neal to Annette, "come inside the station. I want to show you something."

Annette knew . . . inside she broke down and cried like a child.

"It's good-by now, Neal," she said. "I don't know what I'm going to do without you. . . . I feel like . . . almost going back . . ."

"By George," said Neal, "I wish . . . but no. You'll stick it out. I know you will. I'm sure. But, if it's tough on you—think of me. I feel like chucking up my job . . . ."

"Look—See!" Exclaimed the Brute.

A tin horn blew outside. "W-what's that?" cried Annette.

Mrs. Hardin and Joe Welcher rushed into the station. "The train—the train," they cried.

They were quite right. The engineer was already pulling his rusty lever. The train actually was starting up, stationary though it had seemed.

"Go ahead little one," said Neal, "good luck."

Half a mile farther down the track, out of the jungle crept two figures—each with gun in hand, each with a black mask upon his face. Across the track they piled a tree or two—these trees had been plucked up by the roots by one of these masked men.

After completing this self-appointed task, they crept back into the jungle and waited patiently.

Finally one of the men prodded the other. "Now," he commanded, "here she comes."

A faint tin horn whistle was heard around the curve. The fast mail of the Chantillo line approached. She approached, but seeing the obstruction on the track, she hesitated, halted, came to a full stop. The two masked men leaped upon the engine and held up the crew with their ever-ready guns.

Hernandez stepped into the car behind. He fired three shots. He aimed at no one. The shots had their effect—on two persons at least. Joe Welcher ducked at once. Mrs. Hardin followed suit. No one was hit. Annette alone retained her nerve.

"So," she said fearlessly, "it's you again. And where is your charming friend, Miss Irene Courtier?"

"Brute," cried Hernandez, throwing off his mask, "bring those two men here."

The Brute brought them. "Take the bell cord," said Hernandez to the train crew, "and tie this young girl up."

Hernandez, still with his gun on guard, bent over the girl. He plunged his hand into her breast, and with a jerk tore the chamois bag from her neck.

"I'll tie this man myself," said Hernandez, approaching Joe Welcher. He leaned over Joe, and wound some cord loosely about his hands.

"I'll need you," he whispered, "but make no mistake. Mistakes are fatal when I'm around."

He left the Brute on guard and marched the crew back to the engine. "How near are we to the nearest station?" he queried, "tell me truth."

"Not for miles, senor," they gasped, "only a little farther on is a deserted station, Montrada. No trains stop there. It is discontinued."

"Any occupants?" queried Hernandez.

"None—it is deserted. It is even haunted, senor."

"How—haunted?"

"Something there goes click—click—click—always when we pass."

Hernandez chuckled to himself. "A telegraph instrument," he said to himself. "I thought so—that's the shack we passed this morning. Now," he commanded, "come out here and clear the track of these obstructions—no, you do it," he commanded the Brute. The Brute ran from his position in the car, leaped to the ground, and with a twist or two of one hand tossed the felled trees from the track.

"Now," said Hernandez, "run us down to that shed. I don't know what I'm going to do just yet, but I'll find out there."

He whistled softly. A third figure emerged from the forest, tripped across the rails and entered the baggage car. This was Inez Castro. She passed on into the passenger end of the coach. She smiled gently at Annette.

"So, my charming friend," she said, "at last you have seen fit to intrust your treasures to Senorita Inez Castro. Good, my little one."

They reached the ancient shed. Over its closed doorway was an old sign, "Montrada."

Hernandez broke open the door by means of his usual agency—the Brute.

Hernandez darted to the keys—he was a soldier of fortune and this learning was one of his equipments. Bound as she was in the car, Annette could hear what the instrument said, for, singularly enough, Hernandez, when he first called, used the Spanish tongue; later he clicked in English words. It was clear that Ponto was at the other end of the wire, and somewhere near La Plaza.

"What news, good Ponto?" he inquired over the keys. "Any danger of pursuit?"

And Ponto answered: "That," he said, "I cannot tell. But much activity. There is talk of war. There is talk of a detachment coming over land."

"By train?"

"By train," said Ponto, telegraphically speaking.

"And the next train?"

"Days off," said Ponto.

"Good!"

"Wait," said Ponto, "there is more news. I shall call you up again."

"What news?"

"I do not know. There is something going on. I shall find out in an hour."

CHAPTER XLVII.

The Troop Train.

Ponto's information was quite correct. It had to be, or he could never have qualified as the partner of Hernandez.

On Neal's return from the railroad station at La Plaza he found an undercurrent of excitement present upon the cruiser Albany. Half an hour after his return the captain of the cruiser had received a wireless from Washington. It was significant in its tenor. The wireless operator handed it to him as it was received.

The captain glanced at it. "It looks important," he said, "decode it at once."

It was decoded. This is what it said:

GENERAL ORDERS FROM NAVY DEPARTMENT.

Deciphered From Code "G."

War imminent with Allemania. Keep all ships prepared for action. Transfer all possible men to Pacific squadron. Recommend meritorious warrant officers for promotion to commission.

HUTCHINSON,
Chief of Staff.

An order from Washington is an order. An order when war is imminent is a double quick order. The captain of the cruiser Albany had been waiting for double quick orders—he had smelled them in the air. He had felt them in his bones. In one hour he had picked his men. The first man he summoned was Neal.

"Neal," he said, calling him by name, "I've recommended you for a commission."

Neal jumped out of his shoes almost. "I—a commission," he gasped; "why—I thought—I can't understand—"

"Don't think," said the captain sharply; "we've got to act."

He handed Neal typewritten instructions. "You'll get your commission in due form. My recommendations go—particularly at a time like this. Take fifty men at once—and proceed to join the battleship Missouri at Chantillo. That's all."

Neal saluted and swung about. "Wait," said the captain. Neal waited. "I just want to shake hands, old man," said the captain. "You deserve your luck if ever man did. Good-by."

An hour afterwards Neal and his squad were at La Plaza once more, consulting the railroad master.

"We want a train, and right away," said Neal. "The road will make its fortune. It will declare a dividend. When does she go?"

"Not for two days or so. The engine—the good one—she is be repair."

"What can we do?" said Neal.

The station master brightened. He desired at all costs to get this squad of Americanos out of town. They were rioters—at least so Ponto had informed him. Yes, they must go.

"Ah, senor," he said, "I have idea. There are dirt train cars—no engine—but what you call, almost gravity road from here to Chantillo—all downhill almost all the way."

"Show me," said Neal.

He was shown. "Well," he said to his men, "what do you say, boys. They'll rock us some, but they're the best we can do. Is the road clear?"

"Clear all the way, senor. The last train the little train—she have arrived at Chantillo now."

"We're game," said his men; "come on."

They came on—that is they got on—the whole squad. A crowd of natives saw them off. One of these natives, hidden from view by the others, crawled under the foremost car and did something. He crawled to the second and did something—to the third and did something. What he did no one knew.

Down the line at the deserted shack labeled "Montrada," Hernandez came out from within, with complete satisfaction written on his face.

Hernandez sauntered out and glanced up the track. The track was straight and downhill all the way. It was like a canyon cut through a mass of undergrowth and heavy trees. There was nothing to distract the attention—it was a clean cut avenue as far as the eye could reach. He watched. . . .

Up the track somewhere the troop train was shooting curves with sprightly lurches. "Getting a bit too lively," said Neal; "better apply the brakes."

The order was obeyed—so far as the will was concerned. But the man at the brakes shook his head. "Brakes won't work," he said.

"No matter," said Neal, "we reach the bottom of this hill three miles out of Chantillo. Then we go up. We're bound to slacken up sometime."

One of his men plucked him by the sleeve. "What's that?" he cried, pointing down through the canyon, flanked by trees. "Look ahead."

"By George!" said Neal, "a train. The brakes—every man jack of you—the brakes!"

The brakes wouldn't work. "Funny," said Neal; "we tried before we started. Funny they won't work." It may or may not have been funny—but it was the fact. The brakes would not work.

"We're in for it," said Neal. "Boys, every man jack of you—you've got to face this. That jungle is soft stuff—it's a velvet lining. We may get scratched, but we can't get hurt. Every man of you get ready and when I say the word slide off—as easy as you can—but slide. Guns and equipment first—then yourselves—when I say the word."

Squatted on the edge of the jungle was the Brute. He looked up the track, idly following Hernandez' gaze. Suddenly he rose—quivering with excitement.

"Look—see," he said. His glance turned dumbly from the onrushing troop train to the stationary one. Another man might have rushed to the latter and warned its occupants or carried them out. But not the Brute. He had a glimmering. He started off.

"Come back," said Hernandez, "you beast!"

The Brute never heard him. He only heard the onrushing train. He seized a loose rail lying by the track. He thrust it under the stationary rail—the nearest him—he thrust it into the roadbed. He jerked and strove at it like a demon.

Within, Joe Welcher heard it coming. He looked now. He gave one gasp, made one dive, and plunged into the safety of the jungle.

Hernandez dared not move. Safety lay in his remaining up track—out of the danger zone below. He felt that the Brute was doing fruitless work—that no man, no human agency within a minute's time could raise that rail. He didn't know—there was something superhuman within the Brute. He was more than a man—he was a man-driven beast—perhaps God-driven.

He plied his giant lever like a giant. . . .

Neal realized at last what was meant. He knew now that that train was Annette's train. His men were off—all of them. He alone remained, rooted to the spot. He was powerless to do anything. Suddenly—obeying the instinct of safety—for he could do nothing else—training had taught him that a foolish risk of life was suicide—obeying the instinct of self-preservation, he leaped, leaped safely.

Leaped Upon the Engine and Held Up the Crew.

At that instant with one final grunt—one final heave—the Brute bent his mighty shoulders in one last desperate thrust—and sent the rail spinning, loose, detached, uprooted, to one side.

The next instant the troop train—empty as it was—reached the broken track and left it. With the roar of thunder it plunged, plowed through the soft earth and plunged pell mell through the deserted shed, missing the train by a mere hairsbreadth.

An instant later Hernandez plunged into the jungle. The Brute followed him, as a guilty dog follows its master—whimpering with fear.

(TO BE CONTINUED.)

Business meeting	

Commendable Promptness.

The Modern Woodmen of America have again made a record for promptness in paying claims. The late Adolph Rinker carried a policy in this order for $3,000. The certificate of death was sent in to the head office at Rockford, Ill., on the fifth of December, and on the 11th W. W. Prichard, sr., clerk of the local lodge, handed to Mrs. Rinker a check for the amount. This claim had to go through the usual form and took its place among the several hundred handled every month, so that the absence of delay is remarkable. This order now carries total of nearly $150,000 among its members in this city.—Thief River Falls Times.

Congregations Unite.

A meeting composed of five members of each of the two Norwegian congregations in Goodridge was held in the school house in Goodridge Jan. 20th 1917, at two o'clock. All being present as follows:

Representing the United Lutherans:

G. C. Gulrud, H. Christianson, L. J. Foss, M. J. Stephenson and Sever Anderson.

Representing the Synod Lutheran:

M. G. Thoreson, Geo. Wold, O. E. Wiseth, G. Gunderson and H. A. Halvorson.

G. C. Gulrud was elected foreman of meeting. H. A. Halvorson elected Secretary.

Resolutions made by the United congregation at their annual meeting were read by their secretary and were as follows:

Resolution No. 1. That the congregations unite and form a new congregation.

Resolution No. 2 That the property of these two congregations are transferred to the new congregation.

Resolution No. 3. That this new congregation remains independent until the "Union of the different norwegian denominations are perfected".

Resolution No. 4. That the new congregation seeks admittance into the New Union.

Resolution No. 5 and 6. That a pastor will be called when circumstances permit, who will reside at Goodridge and arrangements be made with the surrounding country congregations to be served by same pastor.

The foregoing resolutions were thorougsly discussed and debated.

On motion made by O. E. Wiseth and seconded by Sever Anderson, resolution No. 1 was unanimously carried.

Motion made by Geo. Wold and seconded by L. J. Foss that resolution No. 2 be accepted carried unanimously.

Motion made by G. Gunderson, seconded by H. Christianson, that resolution No. 3, be accepted, carried unanimously.

Motion made by L. J. Foss, seconded by O. E. Wiseth that resolution No. 4, be accepted, carried unanimously.

Motion made dy M. G. Threson, seconded by L. J. Foss that resolutions No 5 and 6, be accepted carried unanimously.

It was decided that a union meeting of the two congregation be held and on motion made by L. J. Foss and seconded by O. E. Wiseth that a meeting was set for Saturday Feb. 10th, 1917, at 10 o'clock.

No further business meeeting adjourned.

H. A. Halvorson, Sec'y.

Free Garden Seeds.

This year the government at Washington will spend $243,000 in the distribution of the United States. A request mailed eithes to the Department of Agriculture or your representative in congress will result in the placing of your name on the list, and you will receive the seeds in due course. However, the seeds, both vegetable and horticultural, are almost entirely of new varieties, or old varietie that have never been tried in your section, and you are supposed to make a report in the fall, either boosting them a success, or condumning them as a failure, as the case may be. Your report is of the utmost importance, as it assists the department in determining the desirability of certain varieties for certain sections.

Better Things For Our Rural Schools.

These are some of the things asked for by the National Conference for better rural schools:

160 day, or more, school term.

Enough and adequately prepared teachers.

Consolidation of rural schools with an average of about 12 square miles for each school.

Teachers' home and small demonstration farm as part of school property.

An all year session adapted to local conditions.

A country library with branch libraries under school distribution.

Community organization with the school as the intellectual industrial, educational and social center.

A modern high school education for every boy and girl in America, in the country as well as in town.

A Swedish bridegroom among the middle and lower classes carries a whip. This is an emblem of his authority in the domestic circle.

Wilson Oldest President.

Washington, Jan. 16—President Wilson is the oldest executive to preside over the destinies of the United States for the last 60 years. When he is inaugnrated for the second time March 5th he will be 60 years old, a span of years that no president has crossed since the inauguration of Buchanan in 1857.

Incidentally the president is one of the six oldest executives ever in the White House. Previous, to 1861, the men chosen to hold the reins of government generally reached a late period in life before their election. John Adams was 61 when inaugurated in 1797, Jackson also was 61 when first inaugurated in 1829, Harrison was the oldest man euer chosen for the presidency, being 68 at the time of his inauguration in 1841, Taylor was 64, Buchanan 65, respectively when they were inaugurated.

Aside from these all presidents have been younger than Woodrow Wilson when entering the White House. This has been particularly noticeable in the last 50 years when all executives have been comparatively young. Theodore Roosevelt was the youngest president ever inaugurated in this country, being but 42 when he took office.

Germantown Man Denies Being Dead.

A report to the effect that Gilbert Benson of Germantown, was murdered by robbers at Golden Valley near Minneapolis last week has been effectively contradicted by the appearance of the man himself at his home.

Mr. Benson did make a trip to the Twin Cities about the time that the papers were full of an account of a man being murdered by robbers near Golden Valley, but he left for home before the occurance. Having some business matters to attend to in Grygla he put in a day or two looking after these and was thus delayed a short time longer than he had figured on.

The remains of the man found in the straw stack tallied fairly well with a general description of Mr. Benson and somehow the report got started that he was victim. He had not even been robbed, however, which is something rather unusal for a man visiting Minneapolis these days—Thief River Falls Times.

Club Stock Judging Contest.

The second annual Farmers' club stock judging contest will be held in connection with the Farm Crop Show this year on Tuesday, February 6. Three members of any farmers' club will constitute a team. Horses, beef and dairy cattle, sheep and hogs will be judged. A silver cup will be awarded for one year to the successful team with $10 00, $7.50, $5.00 and $2.50 as the four next prizes. Last year's rules will be used. Contestants will report at the Live Stock Exhibit Building, Sathre Block, at 8:45 A. M., Fed. 6. Send names of contestants to C. G. Sevilg, Crookston, as early as possible. This annual contest creates much interest and friendly rivalry. It has an educational value, also, which may be enhanced thru conducting preliminary trials among the club members in selecting the three to come to the final contest at Crookston. Last year seven clubs entered. There should be 20 this year.

Warroad School Destroyed By Fire.

Warroad, Minn. Jan. 16.—A fire destroyed the frame school building with all its contents Monday morning. The janitor started a fire in the furnace, leaving the building about half an hour later with everything apparently in good order, but at five o'clock the two upper stories were ablaze. The cause of the fire is unknown, but it is supposed to have begun from a defective flue. The building was used by the agricultural, domestic economy, manual training and physic departments. The equipment was valued at $2000.00 and the building at $7,000. The insurance on the equipment and building was $4.000.

Grygla To Icnorporate.

The people of Grygla have presented a petition to the county board of Marshall County, for the incorporation of their townsite into a village. The voters will decide Feb. 2, whether or not Grygla will be counted as an incorporated village. Judging by the number of signers to the petition, the sentiment seems very much in favor of incorporation.

Mavie Items.

Mr. and Mrs. C. W. Nelson and Miss Valla Anderson spent Friday evening in Thief River Falls enjoying entertainment provided by the "Movie" palaces.

The Farmers State Bank of Mavie solicits your banking business. Adv.

Rev. and Mrs. O. C Schultz came down from Goodridge Saturday. Rev. Schultz spent the day at Germantown conducting German school while Mrs. Schultz visited at the home of Mr. and Mrs. George Schwandt.

Attorney O. A. Naplin of Thief River Falls was a business caller at the Farmers State Bank last Thursday. Mr. Naplin is president of that institution.

For Real Estate Loans call at the Farmers State Bank of Mavie.

H. P. Nabben, a prosperous farmer northwest of here, was in town last week and made arrangements for the purchase of lumber for a new barn which he will erect in t e sp i ig. The barn will be the largest in this neighborhood.

James Hruby, the Mavie builder and contractor, will commence work on the erection of a new home for himself and—as soon as the weather will premit in the spring.

The Farmers State Bank of Mavie writes insurance of all kinds. Adv.

The Mavie Mercantile Company just completed the installation of a set of new hardware fixtures in their store. They just closed their first year's business in Mavie which they report as very successful.

The people of Mavie are somewhat indignant over the statement which appeared in last week's issue of the Thief River Falls Times to the effect that Cloverleaf farmers are opposed to the proposed Ditch System No. 39. They think that the Times editor must have been having pipe dreams. The farmers of Cloverleaf, while somewhat resenting more ditch taxes, realize that the proposed system is greatly needed to relieve them of flood conditions brought about by insufficient drainage outlets.

Safety Deposit Boxes for rent at the Farmers State Bank of Mavie. Adv.

Carmel Items.

Mrs. Ole Arneson visited with Mrs. I. O. Lillevold last Sunday.

Martha Lavans returned from Grygla last Saturday where she has been employed at the Willard Cafe.

Born to Mr. and Mrs. L. J. Lillevold Jan. 14th, a big baby Girl. Mr. Lillevold has a smile on from one ear to the other.

John Hayen is busy hauling wood for the Hawkins home these days.

Lola Lovsas left for Goodridge where she will be employed at the Stephenson Resturant.

Ruth Hawkins has been on the sick list this week.

Owing to the severe cold the Masquerade was not very well attended. But all present report having had a good time.

Henry Morken visited at the L. J. Lillevold home Saturday, Sunday and Monday.

Trail Elevator Goes up in Smoke.

On Wednesday forenoon at 11:30 a general alarm of fire was spread, and by 12:30 the Farmers Produce & Elevator was in ashes. The fire was caused by a defective heating apparatus, and started in the engine room, spreading rapidly to the other parts of the building, there being no time to save anything, but part of the office records.

The fire came right after a busy season of over hauling the elevator, and putting everything in the best of shape. A new engine had been installed, also a new cleaner, all spouting had been repaired and changed. And while the loss is not exactly known at present, it is sure to be considerable, as the building contained feed, stock, corn and flour.

The coal sheds were saved and will continue to do business as usual until a new elevator can be built.

Considerable damage was done to the side track, also the ties on the main track were slightly blazing.—Fully Advance.

The man who owes everything to his wife seldom pays it back.—Life.

The Public library of Cincinnati makes and lends lantern slides.

Powerful Effect.

"The people who preach economy for others sometimes have to turn in and practice economy for themselves," said a railroad man. "I once asked a business man:

"'Well, George, did you read your wife that lecture on economy you said you were going to?'

"'Yep,' George grunted, with a gesture of disgust.

"'Have any effect?' said I.

"'It sure did,' said George. 'I've bought myself a safety razor, cut out cigars in favor of a pipe and had last season's suit cleaned so as to make it see me through this year.'"—Washington Star.

London Lacks Big Buildings.

It would have been well indeed if the designers of London had had some thought of what we might want in time of war. Then we should have had such towering piles of offices as glorify or disfigure—it is a matter of taste which word you choose—lower New York. But nature would have had to be kinder in the matter of foundations. New York has rock on which to build; London has chosen for its official center an area of the alluvial deposits of the Thames, and these give no secure foothold for thirty stories. One remembers that even when the present war office was built concrete foundations of enormous strength had first to be constructed.—Westminster Gazette.

His Version.

Teacher—What is an engineer, Tommy? Tommy—A man that works an engine. Teacher—That's right. Now, Johnny, what is a pioneer? Johnny—A woman that works a piano.—Exchange.

Cleaning Furniture

To clean white enameled furniture remove all dirty marks with a flannel dipped in wood alcohol, then wash with tepid water to which has been added a little oatmeal.

Paint or woodwork that has become greasy should be cleaned with a cloth dipped in turpentine, then wiped with a cloth dipped in water to which a little kerosene has been added.

Stains may be removed from marble by brushing the spots with a brush dipped in a paste composed of equal parts of soft soap, quicklime and caustic soda. Leave on for several days, wash off and dry, then polish with soft cloths.

When a wicker chair requires cleaning, dust it well and wash in tepid soapsuds. Mix together equal parts of turpentine and sweet oil and a few drops of methylated spirits. When the chair is quite dry rub with a cloth moistened with the polish.

Pickled Eggs

Place in an agate ware saucepan one pint of vinegar and add half a teaspoonful of whole cloves, one blade of mace, one broken stick of cinnamon, one teaspoonful of allspice, half a teaspoonful of salt and a saltspoonful of pepper. Simmer the spices and vinegar for ten minutes. Boil four or five eggs for twenty minutes, cool in cold water and remove the shells. Place the eggs in a fruit jar and pour the boiling hot vinegar over them. The eggs should stand in the spiced vinegar for at least thirty-six hours before using. If one or two sliced beets are cooked with the vinegar it will impart a delicate pink color to the eggs. Eggs prepared by this method are very desirable for salads or sandwiches.

Household Helps

New enameled pans, if placed in a pan of water and allowed to come to a boil and then cool, will be found to last much longer without burning or cracking.

If milk is heated until lukewarm, then chilled suddenly, there will be much more cream. The skin which will form should be removed by straining through muslin.

If copper pans are not very carefully cleaned there is danger that they may poison the food cooked in them.

Salt dissolved in alcohol will often remove grease spots from clothing.

APHORISMS ON WORK.

The time is never lost that is devoted to work.—Emerson.

The result tests the work.—Washington.

A work well begun is half ended.—Plato.

Work first, and then rest.—Ruskin.

At the workingman's house hunger looks in, but does not enter.—Franklin.

A skillful mechanic is a good pilgrim.—Addison.

THE HOUSEWIFE'S PRIDE

The housewife who serves pure, home-baked bread makes the home meal a delight and pleasure to all. She shows true motherly pride by giving to her family the most wholesome and strengthening of food.

All foods consist substantially of fats, carbohydrates (starches and sugars,) and proteins (white of egg, gluten, lean meats etc.). These three substances sustain, operate, and repair the human body. These are the average percentages contained in seven representative staple foods, as shown by U. S. Department of Agriculture Bulletin No. 142:

	Fats	Carbohydrates	Protein
Wheat flour	1.0	75.1	11.4
Potatoes	0.1	14.7	1.8
Beef, sirloin	16.1	- -	16.5
Butter	85.0	- -	1.0
Milk	4.0	5.0	3.3
Salt codfish	0.4	- -	16.0
Eggs	9.3	- -	13.1

Note the high percentages of proteins and carbohydrates in wheat flour. The butter spread on bread and the shortening used in making biscuits, supply the fat that makes these flour foods the balanced ration.

The ELEVEN TOWNS

H. W. Smith, Editor & Publisher

Entered at the postoffice at Goodridge, Minn., as second class mail matter.

The idea of an eight hour work day seems to be on the ascendency. Senator J. D. Sulivan of St. Cloud has introduced a bill providing an eight hour day for all men employed by the state. Things are coming to pass quicker than even a socialist might expect. Some day we hope to see farm products bring a sufficiently high price to enable the tillers of the soil to get their work done in less than sixteen hours.

When Congress called Thos. W. Lawson it struck a veritable hornets nest. At first the members behaved like the little boy after disturbing the hornets home—tried to run away—but the disclosure was too much for them. They simply had to do something, and we look for the usual coat of whitewash. Lawson hit at Wall Street, and that is a serious thing to do when so many of our Congressmen depend on funds from that source to keep them in office. Oh no, to kill Wall Street would be like "killing the hen that laid the golden egg."

Congress and high United States officials have been greatly perturbed of late concerning the "leak" of advanced information of President Wilson's Peace Note. It is about time some of those high-ups got a shaking up. We wouldn't doubt that such leaks have happened before, but the enormous amount of money made by certain persons by the last "leak" brought it rather more forcibly to the attention of the public than its beneficiaries cared for. Let the good work of investigation go on. It will give the general public some valuable inside information and some good talking points in favor of abolition of gambling in stocks.

John Barleycord is getting some hard knocks of late. The passage of a Senate bill to make the District of Columbia dry show very significantly which way the wind blows, and the ruling of the Supreme Court declaring the Webb-Kenyon bill constitutional put a power in the hands of the officials of dry territory which they never had before. Already one North Dakota official has held up several cars of liquor. From now on it will not be so easy so ship liquor into dry states and the old argument that there is more liquor sold in dry states than in wet will be knocked into a "cocked hat." A wave of common sense seems to be carrying the United States steadily on in the direction of an etnirely "dry" country.

Our worthy friends in the town of North seem to feel as if they are all there is to Eastern Pennington County. Just because a few of them might be a little inconvenienced by the construction of Judicial Ditch 39, it must not be. They ignore the fact that all of Reiner, half of Star and half of Goodridge were under water last fall for want of adequate outlet. Why be so selfish? Live and let live. The lands out here may not be as valuable as near Thief River Falls, but the farmers or occupants are human and need something to live on, and they cannot raise food stuffs under water. Don't go out of your way to block a project of this kind. Especially leave farmers on the west side of Thief River out of it. What do they care about our drainage here. It seem, gentlemen, you are going a trifle too far.

We hear so much about efficiency and economy now days that the subject is rather trite, but here is a suggestion which may not be amiss. The Legislature has appointed a commision with the view of effecting more economy in our state government. But, physician heal thyself. Why not begin right with the Legislature itself. What is the good of two branches of houses. Could we not get along just as well with one legislative body. Abolish the Senate entirely, and elect half of the Representatives every two years. It certainly would be a saving. And it would faciliate lawmaking to a great extent. Furthermore there would be less members to introduce fool laws. The first month is taken up with introducing bills, two-thirds of which are entirely unnecesary or purely personal. What would the Legislature do if the efficiency and economy commission suggested the above? We hate to think of what would happen to the commission.

Dead Reckoning.

Dead reckoning is a term in navigation to express the estimation that is made of a ship's position without having recourse to observation of the celestial bodies. It is made by observing the way she makes by the log and the course on which she has been steered, making allowance for drift, leeway, etc.

Mortgage Foreclosure Sale.

Default having been made in the payment of the sum of Eleven Hundred One and 67 | 100 ($1101.67) Dollars, which is claimed to be due and is due at the date of this notice upon a certain Mortgage, duly executed and delivered by Peder H. Thoreson and Anna K. Thoreson, his wife, Mortgagors, to Goodridge State Bank, a corporation, Mortgagee, bearing date the 2nd day of December 1914, and with a power of sale therein contained, duly recorded in the office of the Register of Deeds in and for the County of Pennington and State of Minnesota, on the 2nd day of January 1915, at 3:30 o'clock P. M., in Book 7 of Mortgages, on page 561; and no action or proceeding having been instituted, at law or otherwise, to recover the debt secured by said Mortgage or any part thereof;

NOW, THEREFORE, NOTICE IS HEREBY GIVEN, That by virtue of the power of sale contained in siad Mortgage, and pursuant to the statute in such case made and provided, the said Mortgage will be foreclosed by a sale of the premises described in and conveyed by said Mortgage, viz:

The Southwest quarter (SW¼) of Section twenty-three (23), in Township one hundred fifty-three (153) North, of Range forty (40) West of the Fifth Principal Meridian, in Pennington County and State of Minnesota, with the hereditaments and appurtenances; which sale will be made by the Sheriff of said Pennington County at the front door of the Court House, in the city of Thief River Falls in said County and State, on the 3rd day of March 1917, at 10 o'clock A. M., of that day, at public vendue, to the highest bidder for cash to pay said debt of Eleven Hundred One and 67 | 100 Dollars, and interest, and the taxes, if any on said premises, and Fifty Dollars, Attorney's fees, as stipulated in and by said Mortgage in case of foreclosure, and the disbursements allowed by law; subject to redemption at any time within one year from the day of sale, as provided by law.

Dated January 6th A. D. 1917.

Goodridge State Bank,
Mortgagee.

The Eternal Feminine.

"Did you have a pleasant afternoon, dear?" asked the man.

"No," snapped the wife; "I had a perfectly beastly afternoon."

"Why, I thought you were going down to buy a new hat?"

"I was, and I did."

"Then why didn't you have a good time? I thought"—

"Yes; you thought. Well, I'll tell you. I intended to have a lovely time buying that hat, but they had just what I wanted at the first store I went to, so I had to buy it. And there wasn't anything to do for the rest of the day, so I couldn't enjoy myself one bit."—Brooklyn Eagle.

Lost Days.

"You used to say," she complained, "that you counted that day lost when you did not hear the sound of my voice."

"Yes; I know," he replied, "and I shall never cease to long for those dear lost days."—Chicago Herald.

Cart and Horse.

A certain man, being much vexed by politicians, made bold at length to speak his mind.

"You put the cart before the horse," he insisted. "No man ought to belong to a party. The party is a mere convenience, and it ought to belong to man, like any other convenience, to serve him as it may or give way to something else as it may not."

But the politicians hadn't been in the business all these years for nothing. They were by no means to be talked out of a good thing. "We confront a condition and not a theory," they made answer. "The horse is so used to working that way he doesn't know there's any other."—New York Post.

High Praise.

"Is he the kind of man you'd invite to your house to dinner?"

"I should say he is! He's the kind of man my wife would insist on having at least forty-eight hours' notice to prepare for."—Exchange.

Natural Result.

"I met Jinks this morning, and he was complaining of suffering from that sinking feeling."

"I don't wonder with his wife trying to get into the swim." — Baltimore American.

DOING GOOD DEEDS.

Do a good deed every day. Each ray of light from a distant star has been traveling on through the ether for hundreds of years. Yet it still remains pure and strong enough to affect the negative plate of the astronomer's camera. So with a good deed. Set it going and who knows the end of it? Not the world of this century or the next, for its influence will travel on for ages to come.

The Spear in the Tusk.

It seems unbelievable that a savage's iron spear point seven and a half inches long by one and a half inches wide has been found all grown over and perfectly hidden in a big bull elephant's tusk. The savage had roosted up in a big tree over a spring where the elephant came for water. Then he dropped this spear, weighted to fifty pounds, so as to strike the nape of the neck and pierce the brain. Here the spear went a little to one side of the brain and into the big open funnel end of the root of the tusk, broke off and then "growed" up in the ivory like a nail in a tree. The spear was found when the tusk was carved.—Exchange.

Hard to Kill.

Penguins have an extraordinary amount of vitality and are harder to kill than any ordinary at. A writer once had occasion to kill a large bird aboard his ship, the Southern Cross, and making use of the weapon next his hand, he drove a large spike squarely through the creature's head and finished the operation by nailing it fast to the deck. That seemed to make the job very complete, and he went below decks for dinner. Coming up an hour later, his astonishment was prodigious on beholding the penguin, head erect, flippers out, waddling about, apparently without a thought of the spike, which still remained transfixed in his cranium.

A Bird Mystery.

One of the most curious and interesting of the unsolved problems relating to bird migration is connected with the chimney swift, more often called the chimney "swallow," a very common and well known bird of the eastern United States. After the breeding season the flocks drift slowly south and concentrate in vast numbers on the northern coast of the gulf of Mexico. Then they disappear as completely as if they hibernated under the water or in the mud, according to the old belief regarding birds in general. The last week in March they appear again on the gulf coast. Their hiding place during the intervening five months is still the swift's secret.

The Flowers That Bloom.

Cousin Ann—Mamie has been out riding with Jack every night for a week, and it's putting roses in her cheeks.

Aunt Sue—Yes, and if it doesn't put orange blossoms in her hair I'll miss my guess.—Browning's Magazine.

SYNOPSIS.

On the day of the eruption of Mount Pelee Capt. John Hardin of the steamer Princess rescues five-year-old Annette Ilington from an open boat, but is forced to leave behind her father and his companions. Ilington is assaulted by Hernandez and Ponto in a vain attempt to get papers which Ilington has managed to send aboard the Princess with his daughter, papers proving his title to and telling the whereabouts of the lost island of Cinnabar. Ilington's injury causes his mind to become a blank. Thirteen years elapse. Hernandez, now an opium smuggler, with Ponto, Inez, a female accomplice, and the mindless brute that once was Ilington, come to Seaport, where the widow of Captain Hardin is living with her son Neal and Annette Ilington, and plot to steal the papers left to Annette by her father. Neal tries for admission to the Naval academy, but through the treachery of Joey Welcher is defeated by Joey and disgraced. Neal enlists in the navy. Inez sets a trap for Joey and the conspirators get him in their power. Annette discovers that heat applied to the map reveals the location of the lost island. In a struggle for possession of the map Hernandez, Annette and Neal each secure a portion. Annette sails on the Coronado in search of her father. The crew mutiny, and are overcome by a boarding party from U. S. Destroyer Jackson, led by Neal. In Martinique Annette and Neal are captured, but are rescued by a sponge diver. Inez forges identification papers for herself as Annette. In an insurrection Neal and Annette are again captured, carried to the Sun City and Annette is offered as a sacrifice to the sun god. They are rescued by marines from the Albany. Landed in Tortuga, Annette and Neal are captured and exposed to yellow fever infection by Hernandez, but are rescued by sailors from the Albany. Inez tries to rob Annette and escapes. On her way to Chantillo Annette is captured. Neal is promoted and leads a party of transferred men toward Chantillo, but is caught in a train wreck on the way.

ELEVENTH INSTALLMENT

THE DREADFUL PIT

CHAPTER XLVIII.

Dangerous Delay.

The ire of Hernandez was now thoroughly aroused. A quicksilver mine on the Lost Isle of Cinnabar—probably unworked for a century or more—meant millions, many millions. Hernandez realized the fact. He was playing for high stakes—very high.

"My ancestors," he told Ponto, "had a coat of arms—a motto. 'Ride through'—that was what it said, friend Ponto. I shall follow it—that injunction. I shall ride through."

They were lounging, breathless, panting, against a tree trunk that had fallen athwart one of the invisible trails of a Central American jungle. With them was Senorita Inez Castro.

"What we want most of all," he continued, "and what we must get—is the Lost Isle of Cinnabar. We have the evidences of ownership—all save the Spanish grant in the hands of the Fathers of the Santa Maria mission. Let us seek at once the mission. Let us get all evidences of ownership. Then, as the crow flies, the four of us will seek Lost Island—yes and find it. Once found—possession may be nine-tenths of the law—we'll have possession. But to us possession will be more than that. We know no law."

At Chantillo some few miles away, things were happening. Ensign Neal Hardin with his squad of fifty men from the cruiser Albany across the neck, had arrived to board the battleship Missouri, waiting for them in the waters off Chantillo. These were the fifty men who had so nearly lost their lives on the dirt cars of Montrada

Annette was with them—and Neal was at her side. They were grouped on the wharf.

Neal beckoned to the captain of the little coast steamer that was tied up to the wharf.

"Senor," he said, "behind me is the long arm of the United States government. My government protects its citizens. Here is a citizen—Miss Ilington, Here is another—my mother. Here is a third—my friend Welcher. Dire things have happened, senor. Look. Somewhere in that jungle hide three desperadoes and a woman. They have many methods—but one in particular. At night they will come to you and offer money to be taken aboard." He tossed a stern glance at the captain and tapped him on the arm. "Senor," he continued, "cast your eye over the Missouri there—my ship. Think of the long arm of my government. Take these desperadoes aboard at your peril—at your peril, senor. I have warned you. The rest is up to you"

The little captain shivered a bit.

"Si, senor," he returned, swiftly, with a bow, "it shall be as you say."

Meantime the third member of Annette's party, Mr. Joseph Welcher, had strolled behind a convenient shed to find a resting place for his weary bones and to smoke his fiftieth cigarette that day. He struck a match—started to light his cigarette. Then something happened. The match went out—the cigarette was knocked unceremoniously from his lips.

"What the—," he began. Then he stopped. A stone was lying at his feet. It was this stone that had knocked the cigarette from between his lips—and had almost knocked a tooth or two as well. But there was something else to wonder at. A bit of crumpled paper had fluttered to the ground.

Welcher picked the paper up and glanced warily about him. Suddenly, he saw— The jungle's edge came down nearly to the water. Something was stirring in this thicket. Joe stared. And suddenly the face of a woman—Inez Castro, peered out from behind the huge leaf of a tropic plant.

"Read." That was the message flashed from the eyes of Inez Castro to the brain of Joe Welcher. Joe read.

The note was brief and to the point:

> **We do not board this steamer. But we must reach Santa Maria first. It is up to you and you alone, to create all possible delays. Do not fail us now.**

That night at dusk, Joe Welcher lounging on the deck of the small steamer as it steamed north along the coast—shambled over toward a scuttle, and peered down to see what he could see. What he did see was machinery—the vessel's machinery, working smoothly, well oiled, well cared for—for a steamboat engineer is a steamboat engineer the world over. What he saw was that for the moment, no one was in charge—momentarily the engineer had stopped outside. This was the instant that Joe Welcher had been waiting for. Furtively he drew from his breast pocket a small bar of steel. For one instant he held it suspended over the machinery. Then he let it drop and noiselessly tiptoed away.

Almost immediately there was a terrific grinding noise below, followed by a terrific jolt. Then the engines stopped—and the steamer followed suit. Passengers and crew rushed to the captain—Annette included.

"What has happened," she demanded.

"Something dropped into the machinery and a connecting rod is broken, senorita. It will take time—hours to repair."

At midnight the break had not yet been repaired.

At midnight, another small steamer, also bound north along the coast, passed silently along upon her way. She was within hailing distance, but she gave no sign.

CHAPTER XLIX.

False Impersonation.

In the interior of the chart room on board the battleship Missouri, Neal Hardin—ensign—was discussing with his brother officers the possibilities of the Allemanian war.

A senior officer was poring over translated wireless messages. Against the wall was a modern Mercator's map of the world.

Finally he rose. "A new coaling station—that's the trick," he said, "and we've got to see somebody in authority at Los Angeles—unless they meet us en route. The state department's got to dicker for a coaling station."

He adjusted his glasses and examined the map. "H'm," he said, "Allemania—here's Allemania." He pondered the map carefully—sizing up all possibilities — measuring distances. Finally he placed his finger tip upon a spot in the Pacific ocean.

"There," he said, "is the spot—somewhere about there."

"What's the latitude," queried another officer, getting out a section of another map. His senior told him. "And the longitude," he asked. His senior told him that.

"Eighteen degrees north," mused the junior, "and 123 degrees west." He pored over his sectional map. He shook his head.

"But," he protested, "there's no land there—there's no island to be seen."

Neal almost jumped out of his skin.

"There is an island there, uncharted and unmapped," said Neal, "but it's there. It's the Isle of Cinnabar—we call it the Lost Isle."

"Who calls it the Lost Isle?"

Neal told them Annette's story, from start to finish.

The commander smiled. "We get our coaling stations by making treaties," he said, "I've never heard of making a treaty with a girl, but I suppose it can be done. We'll have to wireless Washington about that. And I know pretty much what our orders will be now—suppose you guess."

Neal smiled. "Follow the girl," he said.

So they followed Annette. But others had preceded her. Even while Annette's journey was but half way through something was happening at the Santa Maria mission in Lower California.

Brother Anselmo was seated at his table, facing Hernandez and his party.

Inez Castro leaned a well-rounded arm upon the table and glanced innocently into the eyes of Brother Anselmo.

"I am Annette Ilington," she said

The brother nodded. "I am sending for the papers, child," he said.

"So you are his daughter?" he said at length—and there seemed a note of disappointment in his voice—"the daughter of my old friend Ilington. He was my young friend then, you—his daughter. And you say my old friend Ilington is dead?"

The chin of Senorita Castro quivered. "Dead," she faltered.

She dropped her face into her handkerchief.

"When did he die, my daughter?" he asked soothingly.

"In 1902," interposed Hernandez, "I was with him—he was destroyed at the eruption of Mount Pelee. We were his friends, Ponto here and I—his partners. We tried to save him. It was no use. He was engulfed. He died—a horrible death."

"She was a small child then," said the priest.

"Yes," said Hernandez.

"Does—does she remember her father—Ilington?"

"Hardly," said Hernandez, "we've tried to make her remember—but no—she hardly does."

The face of Inez Castro was still buried in her kerchief. The priest watched attentively the heave of her shoulders.

Brother Anselmo sighed. "Ah, grief has a long, strong arm—it reaches over decades. And the loss of a father—ah me . . . Here," he exclaimed, "here are the papers Let us have a look."

Inez straightened up. Hernandez and Ponto moved forward. So did the Brute. The sudden movement seemed to startle the priest. He looked up hastily. He caught sight of the blank face of the Brute. He rose.

"Who—what is that?" he demanded, pointing toward the Brute's blank countenance.

"A servant," returned Hernandez, "picked up from a shipwreck some three years ago. He had been a longshoreman. He is demented—always so, they told us. He is devoted to us all—particularly to Annette."

The priest stared at the Brute and the Brute returned the stare.

"The eyes," said the priest, "I never forget eyes. I've seen those eyes somewhere before." He tapped his forehead. "Let me think—when—how—"

Finally he shook his head. "It will come to me later," he exclaimed.

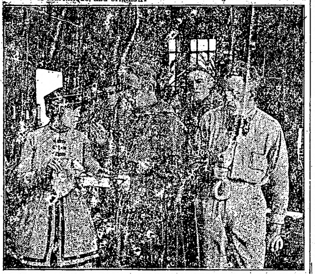
The priest shook out an old and faded parchment. "This," he exclaimed, "is the grant—the original grant."

Hernandez in his eagerness, seized a corner of the grant. The priest brushed his hand away.

"Patience, son," he said, "there can be no delivery until I am satisfied. This charge has been handed down to me."

Inez pointed toward a paper on the table. "There!" she exclaimed, "is my photograph—and the letter from the governor of Martinique."

Brother Anselmo picked it up and looked it over. It was Annette's letter—and it had been vised by the governor of Martinique, and originally it had been attached to the photograph of Annette Ilington. Now, however, genuine as the letter was—genuine as was the guaranty of the governor of Martinique—yet the photograph was the counterfeit presentment of Inez Castro.



"This," He Exclaimed, "Is the Grant—the Original Grant."

"Ah, yes," he said, comparing the picture with the face of Inez and taking advantage of the opportunity to search her very soul, "ah, yes. The identification would seem to be complete."

"Then," said Inez, "I may have the grant?"

The priest folded up the papers and returned them to the iron box that had contained them. He rose and smiled.

"Nothing in my life have I ever done," he said, "without prayer and sleep. This is an important matter. It requires praying over—sleeping over. Come on the morrow, daughter, and I shall then make delivery. Until then—adios."

CHAPTER L.

Hidden Peril.

"Look," said Hernandez, catching Inez by the wrist, "the party has arrived."

He handed his binoculars to Inez Castro. She looked. "They are just landing," she said, "it is all up. They will go to the father of the mission and will make their claim."

"What difference does the grant make," she exclaimed, "why take the risk of getting it? Already that old priest suspects something. What I do not know. But he suspects. Why not take the bit in our teeth and make for Lost Island—get there at once? Why not?"

Hernandez shook his head. "We need every advantage," he said, "if we have evidence within our hands, we will have none. Without the grant—without all the evidence, we will not be believed. With it we will be taken at our face value. Let us get all we can. Let us leave her without proof—she will be help'ess then."

Hernandez kicked Ponto with his foot. Ponto sat up rubbing his eyes.

"Ponto," said Hernandez, "the party has arrived."

"They will go to the mission and spoil it all," said Ponto.

"No," returned Hernandez, "thank our lucky stars the mission is a good two miles out of the village. They will first put up at the hotel—later they will start out for the mission. It is then, on the way there, we must intercept them—you must, Ponto. You and the Brute. This time he will do his duty—or I'll flay his hide. Wake him up. You have no time to lose."

Hernandez was quite right. Annette Ilington, even more eager than had been her enemies, could hardly wait the moment when she might stand before the fathers of the Santa Maria mission and claim her own.

Ponto woke the Brute with a vicious application of the whip lash.

"Spare him not, Ponto," said Hernandez," if he disobeys this time, cut his hide into strips—I give you leave."

At a half run Ponto and the Brute started across the desert, dodging here and there behind little hillocks of sand. Finally the village was cut off from their sight.

"Now we can run," Ponto cried, "make haste."

No sooner had he spoken than his foot slipped—he sank into the ground up to his waist.

"Help," he cried, "a quicksand—help."

The Brute pulled him back to terra firma. But it was not a quicksand, as Ponto soon found out. It was a trap—a trap for jaguars.

Ponto shivered. Then he replaced the dried brush and grass and earth.

Nimbly he climbed into one of the overhanging trees. Then he slid down, nodding to himself with satisfaction.

"She must pass within a hundred yards of this place to reach the mission," he exclaimed, "Beast, we wait here until she comes."

Down in the village, at the little old hotel, Annette ordered out two horses.

"I can't wait," she told her foster mother, Mrs. Hardin. "There's no use talking to me. I've got to go."

Annette started for the mission. Half way there two figures darted out from behind a hillock, and one of them seized her bridle and brought her steed to a standstill. Terror-stricken, Annette saw that the two were Ponto and the Brute—two of the band of desperadoes whom she feared.

"Drag her off her horse," commanded Ponto of the Brute. The Brute obeyed. Ponto gave the horse a cut with the whip and the horse ambled off toward town.

At his command the Brute carried Annette across the desert, totally oblivious to her struggles and outcries. Ponto led the way, stopping from time to time to make pleasant remarks to Annette.

By this time they had reached the small, damp, dank oasis with its shading palms and its little pool of water. Ponto led the way into the very depths of this inviting green shelter. Then he struck the Brute on the shoulder.

"Now set her down," he commanded.

The Brute obeyed. Annette gasped with surprise. She was not bound—she was free, untrammeled.

"What are you going to do with me?" queried Annette.

"Nothing senorita," returned Ponto, bowing low.

Annette, wary, fearful, looked behind her as though she expected an attack from the rear. But there was no one to be seen. Beyond was the desert—there seemed to be no hiding places.

Ponto merely bowed again. "Senorita," he said, with a leer, "beauty in distress—ah me!—it touches my heart always. See. The mission lies yonder—behind you. Your path lies there. You are free."

Annette turned. Keeping her glance over her shoulder, to be ready for treachery, she slowly proceeded on her way.

Suddenly, without warning, she sank into the pit. . . .

Ponto laughed in glee. "The stakes—they are like knives," he cried—"they are deadly—they are for jaguars—and little wildcat heiresses—oh, yes—"

With a cry, Annette found herself falling helplessly into the unknown terror underneath.

"Help—help—help," [illegible]

At the Jaguar Trap.

With a bound the Brute was upon her. He darted to the very edge of the pit, and with the surefootedness of an animal crouched there, throwing his entire body forward and catching her by the shoulders just as she disappeared from sight. He drew her back to terra firma. No sooner had he done so, however, than Ponto was upon them both, knife in hand, his teeth literally gnashing with rage.

He hurled a savage knife-thrust at the Brute—and missed. Then he threw himself upon Annette and half tore her in his frenzy from the Brute's grasp, cutting and slashing at them both with his wicked knife.

"I've got you now, you little wildcat," he panted in guttural Spanish, "down you go."

He thrust her savagely into the pit. Once more the Brute caught her—and in so doing swung the three of them around, so that their positions were reversed. Ponto, throwing caution to the winds, kept lunging at the two with his sharp weapon.

"I'll get you both," he yelled, "I'll get you both."

A moment later he was clawing at the air—but it was too late. Making frantic struggle to preserve his balance, he tottered over backward. There was the crash of a heavy body falling—a tearing, thudding sound—a ghastly, hideous scream—then silence.

CHAPTER LI.

The Jaguar's Mate.

A lieutenant from the battleship Missouri clapped Neal on the shoulder.

"Well," he said, "ensign, we're still following your girl. Pleasant occupation for you, eh."

"Looks as if I'd do it all my life," said Neal, "but some day I hope to catch up to her."

The officers were in charge of a small squad of men who had landed at Santa Maria in Lower California, under orders from Washington, and under advices from the United States district attorney in California. They were on the track of a coaling station—the United States wanted to make a treaty with a girl. The girl was here—somewhere.

"Hello," said Neal, "look. There's a horse—a riderless horse. Go on, boys—get it, double quick."

Three of the squad caught the horse and brought it to Neal.

"A woman's saddle," said Neal. His heart was in his throat. "Look." He drew from the pommel an object that had caught there—one of a pair of woman's gloves.

"Annette's," he cried, "something has happened."

"Forward, double quick," commanded the lieutenant. We'll see."

At the hotel they found Mrs. Hardin and Joe, gazing anxiously off toward the mission. Neal caught his mother by the arm.

"Annette," he cried, "we caught her horse. Where is she?"

They told the story of her starting out.

"Not a moment to lose," exclaimed Neal, "come on boys—hurry all you can."

Meantime at the mission. Hernandez and Inez—with full confidence in Ponto's ability to delay the advent of Annette—had once more presented themselves before Brother Anselmo.

"We have been patient, father," said Hernandez, "and we trust that prayer—and sleep—have given you wisdom and enlightenment, and satisfied you of the justice of our claim."

"Ah, you speak truth, son," said Brother Anselmo. He rose and left the room, returning immediately with the iron box containing the documents in question. He set it down upon the table."

There was a hubbub outside in the courtyard. In the midst of it a door was thrust open, and the Brute strode in, carrying Annette in his arms—Annette, still only semiconscious—still suffering from the shock of that writhing figure at the bottom of the jaguar trap back there in the desert. Some instinct had led the Brute back to his master. He laid the figure of Annette upon the table with the air of one who has done his duty well.

"Brothers," cried Brother Anselmo, seeing Annette's plight, "quick—restoratives—[illegible] for this young girl."

Hernandez took advantage of the confusion—though he himself was confused beyond all peradventure. "Listen," he said to Inez, "leave her with the Brute—go at once. I'll do the rest."

Unnoticed, Inez and the Brute obeyed. They left the room, hurried across the courtyard and disappeared. Hernandez watched them go. His coolness returned. Swiftly, with one bound, he was upon Brother Anselmo and had seized the iron box in his iron grasp.

In an instant he was across the room.

But Brother Anselmo had done something more than pray and sleep in his quiet existence. He was an active, well trained individual. With a loud cry he leaped across the intervening space, and bounded upon the shoulders of Hernandez.

"Help, help, brothers," he commanded.

There was help aplenty. Hernandez fought like a madman, but the brothers clung to him like leeches. Slowly, however, he worked his way toward the nearest exit—and then with a mighty wrench, he threw off all his assailants including Brother Anselmo, and darted, with a mighty leap out through the doorway.

He bounded into the arms of Neal Hardin and his squad.

Neal saw at a glance what had happened. He seized Hernandez' wrist—the wrist of the hand and arm that held the iron box, and twisted it suddenly, painfully. Hernandez dropped the box—but jerked away from Neal, sprang to a window and disappeared.

Behind him he heard the steady plup-plup of many footsteps — the steady lope of marines that eats up the long miles in less time than it takes to tell it.

"Damn them," said Hernandez, "I'll beat them to it yet."

Behind him the footsteps stopped. There was a report—a ping. Hernandez had reached the edge of the green oasis. He screamed with pain. It was as though a red hot iron had seared him. He had been hit in the arm.

"Damn you," he screamed in pain, "I'll beat you to it, yet."

With almost unseeing eyes he tore across the small green space—and then he stumbled, and slid, slid, slid—into what seemed a bottomless pit. He just escaped a stake—a bloody one. And he fell—or rather slumped—upon something soft and yielding. With another oath he rose to his feet and peered about him. Then he drew back in terror.

There lay Ponto—his mate—dead, distorted. . . .

Hernandez screamed in terror—he was only human. This thing was horrible A shadow startled him. He looked upward. The Brute was peering down—he was doing more—he slowly slid down into the pit and caught Hernandez in his grasp. Then, somehow, using his broad shoulders and his arms and knees he worked his way back again to terra firma, and drew Hernandez—groaning with the pain of his wound—up after him. Then with the nimbleness of a deer, the Brute—after slinging Hernandez upon his back—trotted off into the safety of the beyond.

Back at the monastery, Annette Ilington opened her eyes and looked into the face of Brother Anselmo.

"I am Annette Ilington," she exclaimed, "I am the heiress of the Lost Isle of Cinnabar."

Brother Anselmo turned to Ensign Neal Hardin.

"Does she speak truth?" he queried.

"She does," said Neal, "and my government will back her to the limit. She is what she says she is. We all will vouch for that."

"Ah," mused Brother Anselmo, "what a wonderful thing is prayer—what a wonderful thing is sleep—"

He stopped. "I have prayed," he went on, slowly, puzzled, "but not yet have I solved the mystery of the eyes of that big man—the eyes—"

He stopped again. For the eyes of Annette Ilington were riveted upon him.

Communication

Thief River Falls, Jan. 29.—At a special meeting held in the Commercia Club room here today by voters of the township of North, Pennington county, the matter of opposing Judicial ditch No. 39 was carried by a vote of 39 to 24.

The polls were open from 9 a. m. till 5 p. m. and there was a spirited contest in the matter. The result means that the towship officials are empowered to employ counsel and incur such other expenses as are necessary to oppose the ditch, the cost to be bourn by by the township.

The next step in the program will be a meeting here again on Tuesday Feb. 13th, at which other towships east of this city which are also opposed to the ditch will be represented. Up to the present time the following townships in Pennington county have held meetings and will send representatives to the meeting on Feb 13th: North, Silverton and Reiner and in Beltrami county the townships of Lee and Hamre.

Herbert Olson came home from Thorbult last Saturday evening with a big load of Cedar posts.

Rural School Notes.

Attention of the pupils in our rural schools is called to certain prize winning Essays awared by friends of the Northwestern School of Agriculture Crookston. The prizes will be awarded on Commencement Day 1917.

The Essays must not exceed 3000 and may be on either of these two subjects. "The Advantages of an Agricultural Education" and "The Advantages of Sewing School Training in Home Making".

Each of these prizes carries to the winner a cash donation of $10 00. Suppose our interprising boys and girls on our farms and Enrolled in our rural schools try the scheme. You may surprise yourself in the presentation you can make in Essay writing.

The Essays must be sent to Su C G. Selvig, Crookston, before Feb 20th.

A word to our School officers:

Do you know that the State, year before last paid only 80 cents on the dollar in State for our schools and that for last year, 1916 and this year 1917 it will pay only 70 cents on the dollar. The state promised 100 cents on the dollar of State aid for our schools and it is up to you to see that you get it

If the state fails to keep its promise you will have to raise your local tax to make up what is kept back. Write to your Senators and representatives at once to support a law for this purpose.

Must Sign Relinquishments.

Thief River Falls, Jan 31.—Specially prepared blanks were today furnished to County Commissioners Wohl and Peterson for them to use in securing relinquishments for damages that might result from straightening widening and deepening of the Red Lake river east of Thief River Falls Property owners will be called upon within the next few days by the commissioners and nonresident owners will be written to by Secy. Laird of the Commercial club.

The state of Minnesota will not undertake this work of improving the river so as to better the drainage problem without these relinquishments. And unless something of this nature is done the flooded conditions of farm lands that have prevailed the past two years are liable to be repeated each year. The wording of the blanks follows:

WHEREAS, the State of Minnesota under and by virtue of the authority conferred upon it by the Legislature of the State of Minnesota is about to enter upon the work of improving the Red Lake River in Pennington County, Minnesota for the purpose of establishing and maintaining a sufficient outlet for drainage ditches, constructed and to be constructed by the State of Minnesota, and other authorities, for the purpose of draining a large amount of land owned by the State of Minnesota.

That in carrying out such an enterprise it becomes necessary for the State of Minnesota to obtain the right to the use of sufficient land on each side of the channel of said Red Lake River, on which to deposit the substances removed from the river, and on which the contractor may deposit fuel and operate his plant.

NOW THEREFORE, for and in consideration, to and in hand paid the receipt whereof is hereby acknowledged, do hereby grant and convey to the State of Minnesota, the right, permission, privilege and authority to enter upon and deposit and place all necessary dirt and deposit taken from the Red Lake River in the County of Pennington, Minnesota, upon a strip of land not to exceed fifty (50) feet wide, on each side of said Red Lake River, as the same winds, turns and passes through the in said Pennington County, Minnesota. And also, when necessary, and so determined by the State of Minnesota, it or its contractors, may use and occupy said strip of land in connection with the improvement of said ditch or river.

Hargadine, Fire Marshal Issues Warning To Be Prepared For Winter Fires.

Many of the smaller towns and villages of Minnesota are in need of a reorganization of their fire-fighting systems.

"Recent reports received by this department, says Robert W. Hargadine, state fire marshall," show that it is practically impossible for some of the fire departments in those towns to prevent a serious fire loss especially in the winter time.

"Although the communities are improving in this respect there is still much to be done to make the service adequate. The water supply should be inspected daily if possible, and all hydrants kept clear of snow and ice.

"Another subject that should be considered by those in charge of muicipal affairs should be the exercising of the departments more frequently. Just because there happens to be no serious fires in a village or town is no reason to suppose that the department will not be called out at any time; therefore, we would suggest that fire chiefs and others in charge of the fire departments in all of the smaller towns try to keep their men and apparatus up to the highest point, of efficiency durin these winter mouths, an thereby not only reducing the possibility of serious fire loss but actually be of service when the sudden call comes for unusual effort to save life."

Who Wants to Get Some Good Cows

Fine Chance to Start a Good Herd Or Get A Better One.

M. W. Birmingham who is starting a stock and dairy farm north of Goodridge will leave for Wisconsin about February 8th or 10th to purchase some high grade Holstein cows If there is anyone in this locality would like to avail themselves of the opportunity to get some high grade cows Mr Birmingham would like to hear from them so that he could purchase a car load and thus make a saving on freight.

If you are interested kindly write to Mr. Birmingham, c-o Eleven Towns.

State Banks Make Gain Of 35 Million In Year.

State banks of Minnesota, 1,946 in number have $213,960,614 74 on deposit, a net increase of $35,889,227.64 compared with a year ago.

They have $194,359,187.98 outstanding in loans and discounts, or $1,547,-198.55 more than a year ago. They are not only on a new high level as to deposits carried and business volume represented by loans and discounts, but they are in strong position relative to quick assets and cash resources, the report of State Superintendent of Banking F. E. Pearson, as of date Dec. 27 shows. The dcte is that of the last call for statements by the federal and state banking department and the process of receiving details from state banks and tabulating and comparing them has been on since the call was issued.

The capitalization of the Minnesota state banks now totals $21,019.500, or $1,663,000 increased during the year. Seventy-five new banks were organized last year.

Dance At Mayie.

There will be a dance at the Mayie Hall next Saturday evening, Feb. 10th. Electric car will run, leaving Thief River Falls at 8 P. M., running thru to Goodridge and returning. Lowery's Orchestra of Thief River Falls will furnish the music. Everybody invited to attend.

Non Partisan Meeting.

There will be a Non-Partisan League in the Goodridge Hall, Monday February 12th. Everyone urged to be present.

Fire meeting next Tuesday evening at 8 P. M.

A Proud Moment.

"The proudest day of her life this is," said the woman who watched the third floor bride go out dressed in her prettiest frock.

"How do you make that out?" said another woman enviously. "I thought last Thursday was her proudest day. She got married then."

"Ah, yes, but today she goes calling for the first time and leaves one of her husband's cards with her own. Any married woman who can remember back that far will tell you that the first time she distributed the calling cards of some man who belonged to her was the day she truly felt her importance."—New York Sun.

Hen Gobbles Pearl.

Portland, Ore.—Mrs. Lettie Trapp of this city has a valued pet hen named Clarice. The other day as Mrs. Trapp was feeding her fowls Clarice leaped affectionately up to her shoulder, spied a valuable pearl in Mrs. Trapp's earring, gobbled it and leaped down again, gulping. Mrs. Trapp screamed, first with pain as the pearl was wrenched away and then with horror at her loss. She caught Clarice and imprisoned her, but could not make up her mind to have the pet dispatched so that the jewel could be recovered.

ATTAINING SUCCESS.

He who has confidence in himself will win. The first step on the ladder that leads to success is the firm determination to succeed. The next step is the possession of the moral and physical courage which will enable one to mount up, rung after rung, until the top is reached.

HOW TO DRESS FOR SKATING

European Champions Give Some Advice to Devotees of This Winter Sport.

New York.—Neither women nor men dress properly for skating.

"New York women do not know how to dress for skating," says Mrs. Emmy Bergfeldt, Swedish champion. "They forget about outline and silhouette.

"Some women wear corsets too long and too stiff to permit a free hip movement.

"Skirts should be two and three quarters of a yard around and reach just above the curve of the calf."

"The average man skater is more concerned with keeping on his feet than with his appearance," says Prof. Meyer, winner of European championships.

"But the costume should be correctly cut, tight at the knees and with the knickerbockers only slightly curved at the hips," he advises.

Gas Kills Dogs.

St. Paul, Minn.—Guillaume and Pietro, dog pets of Joseph Demalo, were found dead from gas fumes in their master's home. They died by their own paws. The room in which they lay was filled with gas. Demalo denies they committed suicide. He says they heard rats in the stove and in attempting to open the door of the oven turned on the gas.

Baby Led Her to Break Speed Law.

New York. — Her three-year-old daughter, sitting beside her in the automobile, so engrossed her attention that she did not see she was breaking the speed limit. This was Mrs. Catherine Bailey's explanation to the traffic court here, but she was fined $25.

MAD MONK OF RUSSIA

Sergius Michallow Trufanoff, better known as "Illiodor, the Mad Monk of Russia," was up to the beginning of the war a chaplain of the imperial court at Petrograd. He was an intimate of Gregory Rasputin, the Siberian peasant priest and court confessor whose death was recently announced.

Here is how the "mad monk" got his name, according to his own version:

"Perhaps I may recall the fact that when people want to kill a dog and need an excuse to do it they spread the report that the dog is mad. Well, in Russia they wanted to kill me, or do away with me in some other fashion and so they told the people I was mad—crazy, perhaps is a better word. So they called me "Illiodor, the crazy monk."

They Have City Managers.

Twenty-two American cities are now under the commission manager plan. They are Niagara Falls, N. Y.; Sumter, S. C.; Hickory, N. C.; Morgantown, N. C.; Ashtabula, O.; Sandusky, O.; Dayton, O.; Springfield, O.; Phoenix, Ariz.; Big Rapids, Mich.; La Grande, Ore.; Taylor, Tex.; Denton, Tex.; Amarillo, Tex.; Manistee, Mich.; Jackson, Mich.; Abilene, Kan.; Collinsville, Okla.; Montrose, Colo.; Morris, Minn.; Lakeland, Fla., and Alhambra, Cal.

Perfect Garden.

The perfect garden, from the plant and flower point of view is one where flowers may be picked each and every day of the year, yet where no spot of bare soil is ever seen. Keep reserve stock of annuals and perennials on hand so that when an annual has spent its strength or a plant dies its space may be filled with a young annual or a perennial.

THE HOUSEWIFE'S PRIDE

The housewife who serves pure, home-baked bread makes the home meal a delight and pleasure to all. She shows true motherly pride by giving to her family the most wholesome and strengthening of foods.

All foods consist substantially of fats, carbohydrates (starches and sugars,) and proteins (white of egg, gluten, lean meats etc.). These three substances sustain, operate, and repair the human body. These are the average percentages contained in seven representative staple foods, as shown by U. S. Department of Agriculture Bulletin No. 142:

	Fats	Carbohydrates	Protein
Wheat flour	1.0	75.1	11.4
Potatoes	0.1	14.7	1.8
Beef, sirloin	16.1	- -	16.5
Butter	85.0	- -	1.0
Milk	4.0	5.0	3.3
Salt codfish	0.4	- -	16.0
Eggs	9.3	- -	13.1

Note the high percentages of proteins and carbohydrates in wheat flour. The butter spread on bread and the shortening used in making biscuits, supply the fat that makes these flour foods the balanced ration.

Entered at the postoffice at Goodridge, Minn. as second class mail matter.

The way of the "blind pigger is hard", at least that is what some of them must think. Another batch has been brought up for slaughter. Last year the county made a neat sum on marketing the piggers, but this time it is reported that they are very lean, and that the marketing will cost more than the pork will bring.

At a recent Patriotism rally held in New York City, Roosevelt came out for universal military training, and a navy equal to any in the world. Of course this is nothing new from windy Teddy, for he is simply war mad. He should have lived in the age of the Vikings, when hand to hand fighting was the rule. And we venture with perfect frankness, that he would not amount to much in an encounter of that kind. It is alright to bluster and brag when there is no danger, or to kill when the prey is defenseless, but to an equal or better foe face to face meet is not his style. The American people have had enough of Teddy's noise, and we would advise him to go into the trenches in Europe if he is so anxious to distinguish himself.

The worthy editor or the Thief River Falls Times devotes an entire column in his editorial page to Judicial Ditch No. 39. We excuse the editor for his ignorance of local Topography, for he is a late arrival among us, and can not be expected to know much. But his own common sense should tell him that men who have made it a business to lay out ditches and are thoroughly acquainted with the country, know what is best. Nature has designated the way water must run, and no wordy article of the Times editor will make it run up hill. We said in our last week's issue, that the rule is to look to the greatest good to the greatest number, in laying out and establishing projects of this kind, but this does not seem to come into his calculations. From his strenuous fight against the proposition in the face of an over whelming majority, one is tempted to conclude that some other interests are involved.

A bill has been introduced into our Legislature whic call for an appropriation of $50,000 to police the northern woods. The object is to spend the money for depnty-sheriffs to quell labor troubles, at least that is the excuse for the law. The result will be far different. It is simply a measure to help the lumber trust cut its logs—that is the state will help the lumber men cut their logs. At the request of the lumber men, any one man in their employ can de deputized as a sheriff and draw pay from the state. There is absolutely nothing to prevent the man from working for the company, and that is really the intention. The difference will be that instead of the lumber baron paying him, the state will.

Now farmers we would suggest that you write to Senator O'Niell and ask him to pass a similar bill for you. He is strong for this law, and as he has always posed as a friend of the farmers, there is no reason why he should not help you as much as he has helped the lumber trust. It would be kind of nice if you could call on the state to help you pay for some hired help during harvest and threshing. The reason for the law is just as urgent in your case as the before mentioned. Write and ask him to introduce such a bill.

A Roof to Last Forty Years

That's what we claim for the shingles we sell, but we only got the nerve to come out in the open and declare it since we put in our stock of zinc coated nails. We have proof of these nails actually wearing over 30 years and good even then for 10 years longer. Let us show you the shingles we recommend to be used with these nails. Come in today.

An Error Brings an Error

By MARTLAND MALTBEE

Alan Forbes had been engaged to Jennie Hatch for more than a year, and, since his salary was not sufficient to warrant marriage and his prospects of a raise were poor, the two reluctantly determined to give up each other, calling their engagement off.

Jennie had an aunt, an old woman, who lived alone. She was very poor—at least she was supposed to be—and Jennie devoted a great deal of time to her, the old lady being very feeble. About the time that Alan and Jennie decided there was no hope for them the aunt grew worse and died suddenly. On her deathbed she told Jennie that she would find in a crevice in the chimney enough money to bury her and what was left over would be hers.

The day after the funeral Alan received a note from Jennie asking him to meet her at the aunt's house. She had a surprise for him. Alan went to the house at the time mentioned and found no one there. On a table was a little pass book showing deposits of some $12,000. The book bore a number, but not a name.

In turning over the leaves of the book a bit of paper fell out of it. Alan saw the words "Dearest Jennie" written in a man's hand. Yielding to a desire to know who was thus addressing the girl he loved in such endearing terms, he overcame his scruples against reading what had been written. The writer, who signed himself Dick, broke with "Dearest Jennie" on account of a story he had heard reflecting on her good name.

Here was a terrible revelation. Alan, not wishing to see Jennie again until he had made up his mind what action to take with regard to her, went away, leaving the book and the note just as he had found them.

Now, Jennie just before her lover's entrance had gone upstairs and was busying herself putting the house to rights, for it was hers as well as the deposits recorded in the pass book which she had found in the chimney. She had laid the book on the table to show Alan when he came, but a will she had also found she had put in a desk.

When Alan came in Jennie did not hear him, nor was she aware of his going. Noticing that the time she had asked him to come had passed, she concluded to go downstairs and wait for him there. She waited an hour, and, since he had not come, she surmised that he had not received her note. She was greatly disappointed, for she had counted on showing him her inheritance.

Since Alan did not put in an appearance, Jennie sent to his home to learn the reason. She was told that he had gone out about the hour she had expected him and had not returned, nor did he return that day or the next or at all.

His disappearance at a time when their marriage was not only possible, but the wherewithal for their future comfort had been provided, was a terrible blow to her. Moreover, it was a mystery. Had Alan been spirited away, or had he been killed? There was no answer.

Jennie concluded to live alone in the house she had inherited. She had faith that some day Alan would come back to her, and she would receive him in the home that had been provided for them. But year after year passed, and he did not come.

One day an old man came to the house and asked for Jane Hatch. Jennie told him that Jane Hatch had been dead several years. He appeared to be very much cast down. Jennie informed him that she was Jane Hatch's niece and had been named for her aunt. At this the man opened his heart to her, telling her that he had been betrothed to her aunt in their youth and had wronged her, having listened to a story to her injury.

Meanwhile Jennie on taking the pass book to the bank had discovered the note that had driven Alan away, though it had not occurred to her that it was the cause of his going. She now produced the note and returned it to the visitor. This led to her telling him the story of her own bereavement. What had not occurred to her occurred to her visitor. He suggested to her that Alan had come into the house while she was upstairs, found the note in the pass book and, supposing that it was for the living instead of the dead Jennie, had taken himself away.

"My mistake," he said, "has embittered the lives of two generations. This paper shall do no more harm." And he threw it into the fire. Then he added: "I have brought this trouble upon you. I will make it my business to find your lover. If he is alive I will return him to you."

The stranger began a systematic course of advertising for Alan Forbes, and at last one of the notices reached Alan's eyes. He communicated with the advertiser, who at once went to see him.

One morning while Jennie Hatch was attending to her household duties she went from the upper story down to her living room. There stood Alan Forbes. Jennie uttered a cry.

"I have come," said Alan, "to ask your forgiveness for having made what some would call a blunder, but which I now see was a crime. Instead of condemning you unheard I should have listened to your explanation."

"It was all a horrid mistake!" cried Jennie, staggering toward him. He received her in his arms.

TO BUILD SHIPS AT COST PRICE

Bethlehem Steel Will Make Offer to Uncle Sam.

BIDS ON 16 INCH NAVY SHELLS

No Chance For Profit In Them Under Present Tests, Grace Says—Possible Explanation of the Prices Made by an English Firm Which Bids Under All American Manufacturers.

Speaking recently before the Terrapin Club of Philadelphia, Eugene G. Grace, President of the Bethlehem Steel Company, said in part:

In a peculiar sense Bethlehem Steel serves the American people.

For example, though we have been able to obtain in Europe almost any price, we have adhered, in our charges to the United States Government, to the basis of prices established before the war began.

We agreed—if the Government would abandon its plans for a Federal plant—to make armor for our Navy *at any price the Government itself might consider fair.*

Our ordnance plants are at the disposal of the nation at a fair operating cost, plus a small margin, thus saving the Government investment and depreciation.

One of the special needs of the new navy is sixteen-inch guns—guns sixty feet long and capable of hurtling a 2000 pound shell with such power and accuracy as to hit a 50 *foot square* target fifteen miles away.

We have undertaken voluntarily to construct, at a cost of $4,500,000, a plant fitted to build sixteen inch guns.

Under no conceivable circumstances can orders which we may receive for this plant pay even a fair return on the investment.

Considerable comment has been made upon the fact that a British manufacturer recently bid less than American manufacturers for sixteen and fourteen-inch shells for the navy.

I am unable to state the basis upon which the English bid was made. It should be remembered, however, that this bid was for a specific shell, samples of which are being sent over for test—a test not yet made.

Two years ago we took an order for 2400 fourteen-inch armor-piercing shells at a contract price of $768,000, to be delivered within a certain time or we had to pay a large penalty.

The only specifications for making these shells are that they shall be of a certain size and must pierce armor-plate at a certain velocity on impact. It is impossible to foretell the exact conditions of the tests.

We had made large quantities of shells in the past which had been accepted. But in placing this particular order the Department altered the angle at which the tested shells must pierce armor-plate. The result, however, has been absolute inability on our part to produce in any quantity, shells which will meet these novel tests. In fact, we know of no process of projectile-making through which it is possible to produce in quantities shells which will conform to the requirements.

The result is that up to now on that contract of $768,000, we have put into actual operating expense $447,881., and have been penalized for non-delivery $495,744., a total of $943,625., with no receipts whatever.

Such was the experience in the light of which we were called upon recently to bid for sixteen-inch shells.

We bid on these shells at approximately the same rate per pound as that of a fourteen-inch shell contract of one year ago upon which the Government awarded contracts.

We have not the slightest idea what profit there will be in the making of these shells. We do not know that there will be any. There is no certainty that it would be possible for us to deliver a shell to meet the test.

For officers in the Navy to assume that any bid made under such conditions is "exorbitant" is utterly unfair.

We bid on the new battle-cruisers sums which Navy department experts, after examination of our books, found would yield a profit of less than ten per cent. We agreed to assume risks for increased costs of materials and labor, that made it possible that these contracts might yield no profit whatever.

The costs run beyond the amount appropriated by Congress on the basis of the cost estimates made a year ago.

And because shipbuilders could not alter the inexorable cost facts and reduce bids to early estimates of the Navy Department, the prices are called "exorbitant."

It would be a real advantage to be relieved of this naval construction. The profit from it cannot possibly amount to much, and the responsibility is enormous.

We have determined to make this offer to the American Government.

"If you will build two of the battle-cruisers in Government navy yards, we will build the other two at the ascertained cost of building the ships in the Government yards, without additional expense or commissions of any kind. We will also contract to have our ships ready for service ahead of the Government ships."

A Bridal Commission

By JOHN KENAN

I was sittin' with Amelia before the fireplace, with the logs givin' out a cheerful heat. Amelia didn't seem happy, though, and I asked her why she looked so melancholy-like

"I'll tell you, Mr. Grimshaw," she said. "Did you ever hear the song, 'No One to Love, None to Caress?' Well, that's the way I feel. Father ever since mother's death has been restless and cross, and now he's goin' to give me a stepmother. I haven't any brothers or sisters to love, and I'm goin' to have a stepmother to hate."

"Why, Amelia," says I, "the thing for you to do is to get married."

"How can I do that with nobody to marry me?" she asked, awful sad.

"How you talk!" says I. "You know mighty well there's lots of fellers that would be glad to git you."

"I'd like to know where they are. If you know any sich I wish you'd send em around."

"Sartain. I'll git you a husband in no time. Air you particular about his bein' good lookin' or havin' a farm of his own or anything like that?"

"No, I ain't particular, leastways I won't be if you can fix me out before paw brings that red headed widder into the house, 'cause I know I've got to git out when she comes in."

"How much time is there?"

"Well, I heard paw say the other day that he calc'lated to be married before the end o' next month."

"Supposin' I send you a feller that suits you and you suit him, what is there in it for me?"

"I don't see what I can do for you Mr. Grimshaw, seein' that I haven't got a cent in the world, and there isn't any favor I know of that I can do you. But I suppose"—looking down at the floor—"havin' made the match, you'd be entitled to kiss the bride."

This bothered me a lot. I was to fix up a match by which another feller was to git all the kisses he wanted for a lifetime, and I was to git one kiss on the weddin' day.

"It seems to me, Amelia," I says, "that's like sellin' a man a house wo'th a lot o' money for a commission. He gits a whole house, and the broker gits a few dollars."

"You forgit," said Amelia, "that the broker don't want all the houses he sells. What would he do with 'em? Besides, when a man buys a house it argys that he's able to own a house and wants a house, and wants that particular house. I don't see that the broker earns anything more than his commission. Do you?"

"I don't see as he does," says I, scratchin' my head. And I didn't. Howsomever, I couldn't git it out o' my noddle that I was goin' to git the little end o' the bargain. But I felt sorry for Amelia, powerful sorry, for I'd had a stepmother myself.

"Is it customary," says I, "to pay a commission before the transaction's completed?"

"Not at all," said Amelia. "That wouldn't do."

"Why not?"

"Well, the broker, havin' got his pay, wouldn't take any pains in the matter."

"If he didn't do his work he might return what he'd received."

"In that case he'd git double pay for nothin—that is, if his commission was a kiss."

"Isn't there somepin among business men like payin' part down, the rest when the deal has gone through?"

"That's got nothin' to do with brokers; it's when you buy a piece o' property yourself."

"Well," I says, givin' it up, "I reckon I'll have to wait for my pay till I've done the job."

I got up and was goin' out when Amelia said:

"How soon are you goin' to send a feller?"

"I dunno. Somehow I don't like the transaction. Seems to me he'll git the lion's share."

"Well, Mr. Grimshaw, since you look at it that way I don't know but I ought to make it more to your interest to do the job. I might double the commission, one-half payable in advance."

"Now you're shoutin'," I said, and instead of goin' away I sat down ag'in and tuk the first half o' my commission. It tasted so good that I began right off to hanker for the other half of my pay.

"Amelia," I says, "you couldn't pay it all in advance, could you?"

"Sartain not. What would there be to hold you to your work?"

I thort awhile, and then I said:

"Supposin' I make the deal for myself."

"What do you mean by that?"

"I mean supposin' I jist take the other feller by the nape o' the neck and put him out. Then, instead o' actin' as his broker, I acquire the property in my own name."

"Land sakes, Mr. Grimshaw!"

That was all the talkin' we done. I was hungry for another kiss, and I tuk her in my arms and had a dozen without stoppin'.

"Good gracious, Mr. Grimshaw, what you doin'?" she says.

"I'm makin' a fust payment to bind the bargain."

Amelia and I was married before her father brought the stepmother to his house, and Amelia found a home with me. One of her old flames on our weddin' day claimed a right to kiss the bride.

"What did you do to earn it?" says I to him.

Amelia bust out larfin.

NEAL of the NAVY

NOVELIZED FROM THE PHOTO PLAY OF THE SAME NAME PRODUCED BY PATHE EXCHANGE, INC.

COPYRIGHT, 1915, BY WILLIAM HAMILTON OSBORNE

SYNOPSIS.

On the day of the eruption of Mount Pelee Capt. John Hardin of the steamer Princess rescues five-year-old Annette Ilington from an open boat, but is forced to leave behind her father and his companions. Ilington is assaulted by Hernandez and Ponto in a vain attempt to get papers which Ilington has managed to send aboard the Princess with his daughter, papers proving his title to and telling the whereabouts of the lost island of Cinnabar. Ilington's injury causes his mind to become a blank. Thirteen years elapse. Hernandez, now an opium smuggler, with Ponto, Inez, a female accomplice, and the mindless brute that once was Ilington, come to Seaport, where the widow of Captain Hardin is living with her son Neal and Annette Ilington, and plot to steal the papers left to Annette by her father. Neal tries for admission to the Naval academy, but through the treachery of Joey Welcher is defeated by Joey and disgraced. Neal enlists in the navy. Inez sets a trap for Joey and the conspirators get him in their power. In a struggle for possession of the map Hernandez, Annette and Neal each secure a portion. Annette sails on the Coronado in search of her father. In Martinique Annette and Neal are captured, but are rescued by a sponge diver. Inez forges identification papers for herself as Annette. In an insurrection Neal and Annette are again captured, carried to the Sun City and Annette is offered as a sacrifice to the sun god. They are rescued by marines from the Albany. Landed in Tortugo, Annette and Neal are captured and exposed to yellow fever infection by Hernandez, but are rescued by sailors from the Albany. Inez tries to rob Annette and escapes. On her way to Chantillo Annette is captured. Neal is promoted and leads a party of transferred men toward Chantillo, but is caught in a train wreck on the way. Hernandez and Inez present the false identification papers to Brother Anselmo at Santa Maria mission. Ponto is caught and killed in his own trap, set for Annette.

TWELFTH INSTALLMENT

"BACKED BY THE U. S. N."

CHAPTER LII.

A Thorn in the Flesh.

It was late at night when Hernandez and his two companions, Senorita Inez Castro and the Brute, crept to the outskirts of the village of Santa Maria, and stealthily approached the ramshackle old hotel. For two days they had kept carefully out of sight.

They had left the dead Ponto to his fate. He had now become a cipher. He was food for the jackals and they left him to the jackals.

"Then," said Inez, "it shall be Ponto's share for mine."

Hernandez leered at her. "What does it matter," he returned; "what is mine is yours, fair Inez—Inez, mine own."

She crept to him, resting her shoulder against his breast.

"You mean that, Hernandez?" she queried, a jealous note tinging her tone. "There is no one—there never shall be one—save Inez?"

Hernandez leered again. "Time and time have I not told you so?" he answered. "We are one—as in the past—so in the present—so in the future."

Hernandez brushed her gently to one side and rose to his feet. "War first—love afterwards," he said. "Business now—and later, happiness. A whirl of happiness—of world-wide happiness. When I am king of a principality—and you are queen. Come, let us on."

Softly he crept to a secluded doorway of the hotel and knocked cautiously upon it. It was opened in due course. The frowzled head of a servant thrust itself forth.

"Ah," whispered Hernandez, "my good friend."

He slipped a goodly coin into the hand of his good friend—and the good friend became at once a better friend.

"The Americanos?" queried Hernandez. "Have they gone?"

"Gone," returned the servant; "today they went. Enter, senor."

Hernandez, alert but satisfied of temporary safety, beckoned to his two companions and the three crowded into the dingy little closet of the porter.

He turned back to the porter. "Tell us," he commanded, "the best route to San Pedro and Los Angeles. Our way lies north."

Many hours later at Los Angeles, a coterie of Americans sat around a broad table in an unused courtroom in the post office building in Los Angeles.

Spread upon the table were a number of documents—a trinket or two. Among them was a locket. Among them were a patched-together parchment map and a Spanish grant.

The admiral leaned toward the United States district attorney—the latter had come down from San Francisco to place the seal of his department's approval upon the matter now in hand.

"Are you satisfied?" queried the admiral.

"Absolutely," said the district attorney, "the paper title is at present unassailable, and as much to be recognized as though"—he bowed to Annette—"as though our fair daughter here were a sister republic. It remains for you, sir"—his glance bent upon the commander of the battleship Missouri—"to find out who may be in possession—and to bust them in favor of this paper title."

"I wonder whom we'll find?" mused Annette, her eyes glowing.

"Probably no one," returned the admiral.

He returned the documentary evidence and the trinkets to his portfolio. "These," he said to the district attorney, "I take with me."

"Exactly," said the other, "we have photographs of all of them. The investigation has been of interest—a curious situation."

The district attorney placed before Annette a bulky document.

"You will be compensated for this Lost Island," he said, "and the government stands ready now to make you a substantial advance of money upon the signing of this paper."

Annette signed—and sighed with relief.

"That's done," she exclaimed.

The admiral bowed. All rose. "You are rendering our country a great service, Miss Ilington," he said, "and your country will do its level best to protect you. Can we do more?"

Neal saluted. "I understand, sir," he said that I am to command the expedition."

"Yes," interposed the commander, "we've arranged all that with the captain of a steamer. He agrees that what you say shall go—and you'll say it, I feel sure."

"I'll say anything and do anything," returned Neal, "for my country and my—and Miss Annette Ilington."

He said a good deal to her on the way back to her Los Angeles hotel—and kept on saying it.

"But," he added at parting, "careful now. Don't take risks. This man Hernandez is a wonder. I take my hat off to him. He never knows when he's beaten."

"He's beaten now," returned Annette, "particularly if he knows all that has transpired."

He left her—still gravely worried. He would have been more than worried had he known that within a quarter of a mile of Annette's hostelry, in a secluded cafe, sat Hernandez, with his two companions, the Brute and Inez Castro. He would have been more than worried had he known that with them was another individual—Joe Welcher, his own foster brother and Annette's. Welcher was there—depressed, fearful, nervous—but drinking heavily. And he was still the model, shrinking tool, the catspaw.

"And what," queried Hernandez, "about the battleship Missouri?"

Joe produced an extra—its headlines devoted to the navy and the impending Allemanian war.

"The Missouri," he announced, referring to the paper, "steams away tomorrow."

"Where does she steam?"

"To San Francisco."

"Friend Welcher," went on Hernandez, "does this Neal—does he talk—do you get inside information?"

"There's none to get," said Joe, "if there was any, I'd get it."

Hernandez waved his hand. "When does the Missouri sail?" he queried.

"This afternoon," said Joe.

"When she sails," went on Hernandez, "we'll get this girl. We need her. We want her evidence—but we want her, too—until—until we have no further need of her. What we shall run into at Lost Isle no man knows. I want her with us there. Listen, Welcher. You must arrange it. Our paths must cross this afternoon."

Welcher fumed. "I do all the dirty work," he said; "I'm through."

Hernandez poured him another drink, and handed it to him with a glance that ate into Joe's soul.

The drink had just the wrong effect. Joe became angry—noisy—unmanageable.

"I'll be damned if I do your bidding any more," snarled Joe.

Hernandez darted a glance toward Inez. She returned it.

"Leave him with me," she said.

Hernandez did as he was bid. He left her alone with Joe. And in the next fifteen minutes Inez Castro made love to Joe as she never had before. She overwhelmed him with enchantment.

"Tonight," she whispered to him, "tonight, Americano. But breathe not a word to him—he will kill us both."

Half an hour later Annette swung out of the hotel grounds, mounted on a wiry little pony.

She spied Joe and drew in her steed. She noted that Joe was unduly excited.

"Joe," she exclaimed, "tell mother I'll be safe."

Under certain influences Joe's mind acted with unusual rapidity. Drink and the dark eyes of Inez Castro had set him well on edge. Without a moment's thought he stooped by the roadside and plucked a thorny burr. He straightened up again, with the thorny burr concealed within his hand. He did not answer Annette at first, but approached her and her steed.

"Good cow pony!" he exclaimed. He stroked the horse's nose, its neck, its flanks. And then he did another thing.

"Safe as they make 'em," he continued.

And then he did the trick. His right hand stole gently up across the horse's back, behind Annette—stole to the saddle.

Swiftly—and unnoticed—he pushed the thorny burr under the saddle, next to the pony's skin. Then he slouched away in the general direction of the bar.

CHAPTER LIII.

A Dangerous Connection.

There are few drivers of a high-power car who permit themselves restraint upon an open road. But the machine that crept along the avenue in this sparsely settled portion of suburban Los Angeles seemed almost crippled. Everything passed it—even horse-drawn vehicles.

And one horse in particular kept always on ahead. This horse was Annette Ilington's.

There were four people in this car—and three of them were waiting for the inevitable to happen. They crept on and on—always two hundred yards behind.

"Ah!" exclaimed Hernandez finally, "it eats in."

He was quite right. Suddenly the horse ahead swerved sharply to one side, violently shook its head and neck—leaped frantically into the air, and then, with a violent burst of speed, tore down the road like fire.

Hernandez increased his speed to twenty miles—to twenty-five—but the horse tore on before him. Annette was riding like the wind—but she had lost control.

Joe, in the car behind, leaped to his feet and tried to force his way from the car. "Let me out," he cried, struggling; "I got her into this, and I'll get her out."

Hernandez turned to the Brute. "Hold him," he commanded. And the Brute obeyed.

Inez Castro now was on her feet.

"Look—look—look," she cried, "the horse is mad—he'll kill her—look—ah—ah—"

It was all over. In one final burst of frenzy the horse had leaped high in the air, and come down on all fours, not on the solid road, but in the ditch. Annette was flung violently from her steed—and struck the ground with a thud. The horse, freed of his burden, sped on—up the road—sped on.

Hernandez stopped his car. Joe leaped out and ran to Annette.

"She's killed," he said.

Hernandez followed him. "If so, we cannot help it," he returned calmly.

"If she's killed, I did it, you blackguard," cried Joe, remorsefully.

Inez bent over the girl. "She's not dead," she said, "she's very much alive. She's only stunned."

Hernandez motioned to the Brute. "Carry her to the car," he commanded.

And the Brute again obeyed.

"Now, slowly," commanded Inez of Hernandez, "until I revive the girl."

They were in open country now—the community was but sparsely settled. Hernandez glanced warily from side to side.

"We must make haste," he mused, taking a grass-grown road to the right.

He stopped the car before a house. It was an ordinary dwelling. There was no sign of life about it. The grass in the dooryard was a foot high. Everything appeared unkempt. But in the parlor window was a sign: To let, furnished. Hernandez stepped into the dooryard and peered into the windows.

"We'll let it furnished—free—for a short time," he said.

He forced the door and entered.

"All the comforts of home," he said, smiling, "fetch in the girl."

Back in the city, Neal, off duty once again, sought Annette at her hotel.

"She's gone again—alone," said Mrs. Hardin, "she would go. She's so restless she couldn't sit still."

Neal smiled. He was not worried.

He got a saddle horse and started off in the direction taken by Annette.

He Seized a Chair and Whirled It About His Head

Back in the deserted furnished house. Hernandez still looked about him.

"We can hide here till doomsday," he laughed, "running water, too. Look here. Everything but food—everything. Look—yonder on the mantel—even pen and ink. This place was meant for us." He bowed low. "Ah, my charming friend Senorita Ilington," he said to Annette who had recovered consciousness and was staring about her in astonishment, "you have had a long sleep—and pleasant dreams I hope."

He drew down the shades and switched on the light.

"See," he added, "you have slept till evening—pretty sluggard. And how is your good health. No bones broken. That is well."

Annette did not answer. Suddenly she leaped to her feet.

"Joe," she cried, "Joe Welcher—you here?"

"Yes," returned Hernandez, again bowing, "Joe is here—he has always been here—with us. Joe is our good friend. We owe him much—much."

He turned a sneering smile on Welcher. Annette uttered an exclamation.

"Joe—Joe," she cried, "is it—true?"

Joe turned away—his chest heaving, his eyes upon the floor. "Aw, I'm no good," he muttered.

"Never mind, Joe, fair one," said Hernandez, taking from his pocket a legal document already carefully prepared, "we have business at hand. This document—you should really know what it contains. It is in proper shape, I assure you. A bit soiled perhaps, from long disuse in my breast pocket—but well worded. Look—it is complete. It is even acknowledged before a United States consul in Central America—acknowledged by you, fair one."

"It is not," snapped Annette.

"Fair Inez here," went on Hernandez, "signed it Annette Ilington—the consul was quite satisfied that she was you. But—I have erased her signature — she lacks the cleverness called forgery. And your signature may be on record somewhere—who knows. Comparisons are odious. Let us therefore be complete. Take in hand a pen, my pretty. Sign your name, over this erasure—opposite this seal."

"I'll never sign," returned Annette.

"You will sign," said Hernandez evenly, "and you will hand over to us all the evidence you have upon your person. Sign."

"No," said Annette.

"Well and good," went on Hernandez in honeyed accents. "Beast—hold her firm. Disobey and the lash for yours." Hernandez took from his coat pocket a piece of cord. He tied the ends together.

Despite her struggles he fitted this noose-like cord over Annette's head and thrust into it a piece of wood. Then he began to twist.

"Tell me when you've had enough," he said.

Like a stone from a catapult Joe Welcher hurled himself across the room and was upon Hernandez in a flash. Under the assault Hernandez retreated violently to the wall, striking his head against the mantel.

"Are you crazy, you—worm?" cried Hernandez with a snarl.

"I've—turned," snarled Joe in return.

Without waiting for breath he flung himself once more at Hernandez.

"Help!" cried Hernandez. "Inez—tackle this mosquito."

Inez was a valuable ally. She attacked Joe from the rear, and her assault was effectual. Her onslaught was so severe that it caused Joe to retreat. He did retreat until he faced them both.

"Now," said Hernandez. And both descended upon him. Joe was ready for them. He seized a chair and whirled it about his head—frenzy lending him violence and strength.

"Come on!" he cried, "all three of you at once!"

With one wild final swing he brought the chair crashing down on Hernandez' head. No, not on Hernandez' head. It fell short of that, but crashed on something else—the chandelier above Hernandez' head.

There was a ripping, tearing, cracking sound—and then a crash. Down came the chandelier in a tangled heap upon the floor.

For one instant there was a cessation of hostilities. The shades were down—the lights extinguished—the room plunged into semi-darkness.

Annette watched in affright. Suddenly a strange, familiar odor assailed her nostrils.

"Stop—stop!" she cried.

But none heeded her. The Brute still held her fast. And Joe, in his new and ungovernable frenzy, was once more at it with the chair, clearing a space about him on the floor, driving Inez and Hernandez before him into one corner after another.

His chair whirling, touched a live wire—from which the insulation had been torn. The wire, recoiling from the blow, struck a piece of disjointed gas pipe still clinging to the ceiling.

Then—fizz—a spark—a multitude of sparks. A pause—a second's pause.

And then the whole room, with a mighty roar, burst itself out into the open air.

A horseman, speeding down the straight road, heard the boom. He saw the explosion. He spurred his horse. He reached the wayside lane.

Joe Welcher, his head cut and bleeding, was the first to revive. His remorseful frenzy still lent him strength and energy. He sprang to his feet—looked for Annette. He noticed nothing else—save that the room was wrecked.

He found Annette, picked her up and carried her without. She was stunned, but practically unhurt. But Joe didn't know all this. He had

"Up—Up," He Cried, Tugging at Her.

killed her—he must bring her to life again.

With her in his arms he started up the lane—whither he knew not.

Suddenly, in the distance, he saw Neal—on horseback. Welcher broke into a run toward his foster brother.

"She—she lives," said Joe thickly, "at any rate—you can tell her—tell mother—tell yourself—that I brought her back—to life. That pays up—pays up—for—"

He fell prone upon the ground.

Neal knelt by his side. "Gone," he said, taking off his hat, "gone, Annette."

"We'll forget everything," she answered sobbing, "except that he saved me—that he died a hero—a real hero—at the last!"

CHAPTER LIV.

A Piece of Steel.

Neal's first duty was toward Annette—his second toward Joe. He carried Joe tenderly to the side of the road and left him there, covered with green boughs. Then he lifted Annette upon his steed and set off for help. It took time to find a surgeon—time to get a car.

Meantime things happened at the furnished house—the house so swiftly and violently unfurnished by its interloping tenants.

Inside the room nothing but a mass of wreckage was to be seen. But slowly, painfully, impelled by some unseen force, this mass of wreckage slowly rose. Beneath it some giant writhed and wriggled.

Finally a head appeared—the Brute's head.

He looked about the room. Nothing was to be seen. He peered into the depths from which he had just emerged. Then suddenly he saw something.

Seeing—he worked away like mad.

. . .

Inside of ten minutes, Inez, in a stupor, was staring at the Brute from one side of the room—Hernandez from the other.

Hernandez shook the lethargy from him. He crawled to Inez.

"Up—up," he cried, tugging at her, "we have no time to lose. Come on, you beast—come on."

Seizing them both, tearing at them frantically, like mad, he sped with them toward a cluster of trees on the other side of the road.

In the midst of this dense growth he had hidden his machine.

Panting with frenzy, his glance ever over his shoulder, he forced them into the car, sprang to the wheel, threw in the clutch, and was off.

It was three days later, on the high seas, that Hernandez—his other two companions well hidden in the hold—stole out of the companion way of a fruit steamer bound for the southern seas.

He glanced cautiously around a corner.

The first figure that met his sight was Neal Hardin—an ensign in the navy.

"What's he doing here?" demanded Hernandez of himself.

He watched warily. What he saw disturbed him.

Neal was giving orders to the captain of the ship.

Hernandez looked about him. Suddenly he darted forward, stooped, and picked up something from the floor.

"What is it?" queried Inez.

"A piece of steel," he said.

That night, well muffled, he stole toward the compass, and concealed his piece of steel where it would do the most good—or most harm, as you prefer. No one saw him—no one knew.

But on his return, turning a corner, he ran full tilt into Ensign Neal Hardin himself. Neal sprang upon the muffled figure and tore the enveloping cloak from Hernandez' grasp.

"You," cried Neal, leaping for Hernandez, "I've got you now."

They struggled like tigers, but Neal took no chances. This was no test bout. He wanted to make sure of his man. He called for help. Help came. A dozen men pounced upon Hernandez.

When he was safely chained Neal rose to his feet.

"We've got him," said Neal briefly. He gave an order. "Search the ship," he said.

The ship was searched, and within the next quarter of an hour Inez and the Brute, each in the clutch of many powerful men, came into view on deck.

"Lock the woman in a cabin," commanded Neal, "and keep guard upon her day and night."

All night he lay, chained heavily, solitary, in the lazarette, working out his own salvation—not eternal, but material. And he always came to one conclusion—"I'll beat them yet."

All night the pilot puzzled his head over his compass.

As dawn broke, in the crow's nest aloft, the lookout shaded his eyes with his hand—then with the same hand shaded his mouth.

"Land ho!" he cried, "land ho!"

Neal heard him and hurried to the pilot's side. "Can't be Lost Isle," he exclaimed.

"Must be," said the pilot, "we're headed straight for her—straight as the crow flies, sir. But I can't understand it, either—blest if I—"

The sentence was unfinished. With a terrific shock the vessel crashed into an unseen reef—an unknown reef, for they had ventured into uncharted seas

Neal understood the danger. The shock was too terrific to be ignored. It meant a wreck—it would be a matter of minutes only before she filled.

"Man the boats," he cried, "order all on deck. Make haste."

He rushed in person to Annette's door and threw it open. In person he lifted Annette and her mother into the first boat. Inez also was included. It was lowered safely. Neal turned to his crew. "Get the lazarette prisoner," he commanded, "drag him into this boat here. Be about it now."

Hernandez, in a frenzy of fear, had been beating with his chains upon the barred door of the lazarette. They dragged him forth, his face working with fear and rage, and bundled him into the second boat—the Brute leaping in behind. Half way down the side something happened—the gear broke. The boat dropped—its one end still held to the tackle—and plunged its human burden into the sea beneath.

Hernandez, heavy with his irons, clung to the Brute. The Brute was still a paragon of strength. With both Hernandez' hands upon his brawny shoulders—with the dragging weight of Hernandez' irons upon him, he swam, with even, steady strokes, toward the shore—swam for an hour, tirelessly, like some huge dog.

Suddenly his feet touched sand. . . .

Neal and Annette stood upon a strip of beach, staring all about them. "This," said Annette, "must be Lost Isle—and the admiral was right—it is deserted. Unless we find a Robinson Crusoe here—possibly—my father."

Neal shook his head. "I'm not sure it's Lost Isle," he commented, "and I'm not sure it's deserted. See that turn in the short line—let's round the corner and have a better look."

Around the corner, some three-quarters of a mile away, a group of naked natives clustered greedily about a fire. Above the fire something—horribly gruesome—turned and turned upon a slowly-revolving spit. Scattered about upon the ground, were human skulls. . . .

One of the natives held up his arms, uttering guttural sounds and pointed off the shore. The whole crowd broke into a run—reached the shore and waited.

Two men staggered from the water toward the beach.

The group of natives set up a yell of triumph . . . here, then, were two more human skulls—two more gruesome forms to be turned upon a spit over a hot fire. Yes. Mariners were quite right. These were indeed, uncharted seas—Hernandez and the Brute were pioneers.

The Brute looked straight ahead. He placed his arm about his master's quivering shoulders and stepped up out of the sea, straight into that diabolical group of twentieth-century anthropophagi. The Brute knew no fear. The black brutes reached forth clutching hands and touched him—seized Hernandez. The Brute stretched forth a hand, seized a savage by the neck, and whirled him round and round about his head, striking the black men right and left. . . .

Then he tossed his captive into the sea, leaving him to struggle out as best he might.

There was a wild cry among the natives—then suddenly, they prostrated themselves before the Brute.

"He has a white face—white beard," they told each other, "down, down on your faces. He is a god—our god."

In Iceland whistling is forbidden as a breach of divine law.

America's typhoid fever bill is more than $270,000,000 a year.

When two women get their heads together in a parlor it's a safe bet that they're not discussing the weather.—Detroit Free Press.

Old Resident Passes Away.

Hans B. Engen, an old resident of Marshall county, and for the past five years, a resident of Pennington county passed to the great beyond at the home of his son, John B. Engen, on Thursday Feb. 1st., at the ripe old age of 79 years and 11 months. Death was due to heart disease.

The remains were shipped to Holt, Marshall county, his former home, for burial. Rev. Ordahl conducted the funeral services, and the body was laid to rest in the Free church cemetry at that place, Monday Feb. 5th. Although the weather was cold, the church was packed to its capacity, by old neighbors and friends, who came to show their last respect for the dead pioneer.

Diseased leaves to mourn his death two sons and daughtersl they are, Christian Engen of Holt, John B. Engen of Highlanding, Mrs. Alfred Hammaesten of Highlanding and Mrs. Peter Refness of Reiner.

Non-Partisan Meeting.

The Non-Partisan League held a meeting at Thief River Falls last Thursday at which time a speaker from North Dakota addressed the farmers on the necessity of farmers Organizing Politically. A large crowd of farmers and townspeople gathered at the Commercial Club room inspite of the severe weather.

The first part of the address dealt directly with the subject of organization and was clear and concise. The speaker had his points well fortified with concrete examples which brought conviction to his audience. Every one who listened to his arguments was forced to conclude that the farmers are helpless without some organization to look after their interests.

Mr. Williamson concluded his talk by relating the history of the movement in North Dakota and what the program of the League is over there. The farmers who had come, in the face of a howling blizzard, went home well satisfied with what they had heard and a goodly number were added to the alrendy large list of members in this county.

We need more such meetings, and Goodridge will be favored with one next Monday, February 12th. Farmers in this vicinity should turn out in body and pack our little hall for you will hear something worth while. This is a movement for your benefit and the talk is directly to you. Business men are also invited as you will benefit by co-operating with the farmers in this fight.

Jolly Corner News

Everybody is busy keeping their houses warm now days.

Sam Olson came in this neighborhood last Saturday evening to visit relatives.

A party out here said he plugged the hole for the groundhog, but he must of plugged the wrong hole, because he must have been out and saw his shadow by the looks of this weather.

Rachel and Elvia Baker were over to Henry Tellefson's after oil, last Saturdayr

Mrs. Ole Knudson has not been feeling well for the last week.

Fred Ellertson was a visitor at Edwin N. Olson's place last Saturday night.

Ole Knudson was a visitor at Simonson's last Wednesday.

Henry Tellefson is busy getting his wood home now days.

Amelia Simonson was a visitor at the R. Rupprecht home last Tuesday.

A meeting was held at Chas. Johnson's home last Monday evening.

Eno Olson came home from the woods last Friday afternoon.

Anton Knudson made a trip to Thief River Falls last week.

August Knudson was over to Anton Knudson's last Friday.

Chas. Johnson helped Henry Olson haul hay last Saturday.

It is hard for the school children to go to school now when it is storming so.

"Bugges at Night."

The rare version of the Bible which in one place declares "thou shalt not need to be afraid for any bugges at night" should create a furor in mosquito localities until it is explained that "bugges" means bogy and is the word which the King James version renders as "terrors."—St. Louis Post-Dispatch.

Two New Men Added To Extension Staff.

O. M. Kiser and A. R. Knutson have been added to the extension staff of the Northwest School of Agriculture and Experiment station of Crookston. These men will be available for farmers' club meetings during the months of February and March, beginning February 12, it was announced today by authorities at the school.

Both of these men are scheduled for the early part of February.

Money In Chickens.

John Johnson, residing a short distance south of town, says that there is money in chickens, provided they are properly taken care of. Mr. Johnson has a flock of between 80 and 90 hens. Since Thanksgiving they have provided him with an income of five dollars per week, having laid steadily all through the winter months. Mr. Johnson says that his hens are not so very different from others, but that he treats them differently from most folks. He states that the first requisite for a hen is a comfortable place in which to stay. His coop is situated in the southeast corner of the barn, having on one side the horse stable and on another the cow barn, while the third side is filled with hay. This provides a nice warm place no matter what the weather is outdoors, and to this fact he attributes his success. Besides his chickens, Mr. Johnson has a herd of eight to ten milch cows and these have provided him with a cream check averaging $50 per month all winter. Between the cows and chickens his income has been in the neighborhood of $70 per month since the cold weather set in—Thief River Falls Times.

Our Legal Consistency.

A man who has eleven children and earns $10 a week was hauled into the New York courts last week on a charge of nonsupport, preferred by his wife, and the judge who heard the case declared he must support his family or "take the consequences." It did not appear by the evidence that the man was lazy or extravagantly expended his earnings. He seemed industrious and thrifty, but he was in a poorly paid employment and mentally incapable of breaking the chains of circumstances which environed him.

At almost the same time, in another department of the same court, Mrs. Margaret Sanger was being tried for disseminating the knowledge of birth control, and her sister lay in jail after conviction on the same charge. Does this not tend to excite rather satirical comments upon a state of society which allows these things?

If $10 a week labbrers must support their children or "take the consequences," why not permit them, to be the judges of how many children they shall support? If the law denies them the right intelligently to limit the number of their offspring, how can it consistently punish them, if in the course of events they have more offspring than they possibly can support?

All this only emphasizes the absurdity of society's present attitude on the question of birth control. It is a matter of common knowledge that those who are best able to support offspring have easy access to information which is denied to the poor and the ignorant, the very class in need of such instruction. Birth control, of course, is no panacea that will reconstruct society and remove all its ills. But will it not result in preventing a good deal of unnecessary suffering, ameliorate poverty to a certain extent and quite appreciably decrease the number of diseased criminally disposed and defective children who are a curse to themselves and to the rest of humanity?

Yet our medieval legal enactments make it a crime to give such information.

The Roaming Bee.

According to a well known apiarist, if a bee finds a suitable patch of flowers by following a zigzag course of exploration it will seek it again by the same devious route and not in a straight line from the nest. Thus he found that certain bees coming to visit a hollyhock in his garden always came over the wall some twenty-five yards to one side of the flower instead of directly opposite. They were following the devious route by which they had first found the flower.

Valley Folks Will Compile Norse History.

A movement has been launched among the Scandinavians of the Red River valley to gather facts regarding the valley's settlement by the hardy Norse pioneers who had such a large part in redeeming the region from barren wilderness to a state of productive civilization.

Dr. Herman Fjelde of Fargo, has taken the initiative in the matter and Scandinavians of Polk and other counties in the valley are urged to correspond with him.

The first Scandinavian who settled in the valley was a Daniel Olson with his family, who is named among both the French and half breed settlement at St. Joseph or Walhalla in 1861.

The first norwegian buried in North Dakota was a soldier with the name of Lund who was buried at the Fort Abercrombie cemetery in 1862 or 63.

In 1863 a party Scandinavian regiment was stationed at Fort Abercrombie. They were Norwegians and Swedes mostly from Carver county, Minn. Among them may be mentioned the late Rev. Ole Paulson, who died in Fargo some years ago. He was then lieutenant and there is a book by him printed in Norwegian. He is called the grand father of Augsburg seminary in Minneapolis the first Norwegian Lutheran seminary in this country.

The Scandinavian soldiers did not advertise the country as they suffered so much while they were chasing after the Indians. It was a dry year and hard to get water.

The Norwegian discoverer of the Red River valley as a home for settlers was an old lawyer and editor from Norway, Paul Hjelm Hansen. He was sent by the Minnesota immigration commission.—Crookston Times.

Fire Losses in Pennington Co.

The second annual summary of fire loss in Pennington county as prepared by Robert W. Hargadine, Minnesota State Fire Marshall, shows that the people of this county are wide awake to the necessity of fire prevention.

The summary shows that during the year ended December 31, 1916 there were 15 fires in Pennington county, with an aggregate loss of $14,450.

During the corresponding twelve months in 1915 there were 16 fires and the loss aggregated $45,457.

A decrease of 1 fire and $34,007 in losses.

The individual reports as checked up by this department for the year 1916 show beyond a doubt that while there was considerable loss from fires it might easily have been still greater. It is evident that the people of Pennington county, individually and collectively have taken proper and necessary precautions to safeguard both private and public property from fire loss, by reducing the amount of inflammable material to such an extent that the interests of the entire community have been well maintained in the prevention of fire.

Literary Program.

A regular meeting of the Goodridge Literary Society will be held in the school house Thursday evening Feb. 5th. The following program will be given.

Song- America- By Audience
Roll call- Respond with anecdotes and sayings by Washington and Lincoln
Eulogy by Washington- Chester Tvedt.
Song- Star Spangled Banner- Audience
Debate- Washington's work for his country was greater than Lincoln's- Affirmative- Herb. Menzel, Negative- Stuart McLeod.
Song- Dolly stop crying- Eunice Tvedt
Recitation- Milred Seavy
Song- By Primary children
Current Events- Palmer Tvedt
Song-Marching thru Georgia- Audience

After the program a necktie- social will be given. Ladies are requested to bring lunch and cups, and the gentlemen are kindly asked not to forget their pocket books. Everybody invited to attend.

Trees Not Endanger Sewers.

Complaints are heard of tree roots entering sewers, but if the joints are perfect no such thing is possible. Roots are attracted only by soil moisture and cannot partake of food through any other medium. Therefore no moisture, no roots. Concrete is never waterproof, but may be made so by asphalt and other coverings. If so treated and a good job is done, no tree roots will ever enter a sewer through a joint in the pipe.

HOME TOWN HELPS

LEARNING TO KNOW FLOWERS

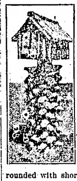
Information That Would Be of Immense Value to the Man Who Is Planning a Home.

The home-maker, with facilities at hand, could choose wisely what to plant in his own home grounds. Lectures, instructive and helpful though they are, can hardly accomplish for the amateur planter in the course of half a year what a single visit to a shrubbery or a perennial garden would accomplish for him in half an hour. And, in addition, as everyone knows, the parks themselves would be all the more interesting and delightful for these garden sections.

The average person knows few shrubs and few flowers. To tell one of these that the snowball with which he is familiar is only one of a score or more of available viburnums; that the shrub he knows as a "lilac" can be had in numerous varieties, some growing even into tree form, or that what he calls the "syringa" or the "mock orange," can be had in dwarf bush that is a mere pygmy beside its robust cousin—to recount facts of this sort is to surprise him. Yet it is important that facts of this sort be brought before him. There is too much uniformity in the planting of city yards—too much use made of the same material. Public gardens, exhibiting not only the common varieties, but the uncommon as well, those not so often met with but despite that, quite as beautiful as the others, would serve to overcome the tendency toward monotony already only too apparent. There are many purposes, as a matter of fact, that these gardens would serve, all of which the park board might do well to consider.

MAIL BOX OF RUSTIC DESIGN

Minnesota Farmer Had Good Idea When He Placed Ornament in Front of His Home.



A rural mail box, rusty and dilapidated, such as one occasionally sees fastened to the top of an insecure post at a distressing angle, presents a sharp contrast to the mail box which a Minnesota farmer has erected in front of his home. The box itself, which is of the ordinary metal type, is inclosed in a miniature log cabin with a gable roof. The post supporting the box and cabin is surrounded with short sticks which have been laid crisscross. The rustic effect is very pleasing.—Popular Mechanics Magazine.

Fire Prevention Education.

Fire prevention in public schools and fire prevention in homes are matters naturally of keen interest. In the first case the question is largely one of proper legislation regarding the construction and protection of school buildings; in the second case it is largely a matter of individual education. It is estimated that 60 per cent of fires occur in homes, though of course 60 per cent of the fire loss does not result therefrom.

Perhaps it is education which must be relied upon to furnish the chief weapon in the fight for fire prevention. Legislation is important; so is inspection of the construction and condition of buildings so that legislation may be backed up. But, speaking broadly, the co-operation of the individual, due to his "enlightened self-interest," is probably the essential factor in fire prevention as it is in the other activities of the Safety First federation.—Baltimore News.

Owning Home Gives Sense of Security

Ownership, like faith, affords a sense of security—and the whole conception of home is based on a feeling of security. You can close the door and the world is shut out. You can go away from it, and it will be there when you come back.

Now the tenant, the man who lives in other people's houses, can never be sure that it will be there when he comes back. In fact, that is one of the reasons why he lives in another man's house—he doesn't want it there when he comes back. And he sets forth on an eternal quest after an elusive, visionary something whose absence makes this present dwelling a whited sepulcher.

THE HOUSEWIFE'S PRIDE
The housewife who serves pure, home-baked bread makes the home meal a deli[illegible] pleasure to all. She shows the motherly pride by giving to her family the most wholesome and strengthening of food.
All foods consist substantially of fats, carbohydrates (starches and sugars,) and proteins (white of egg, gluten, lean meats etc.). These three substances sustain, operate, and repair the human body. These are the average percentages contained in seven representative staple foods, as shown by U S. Department of Agriculture Bulletin No. 142:

	Fats	Carbohydrates	Protein
Wheat flour	1.0	75.1	11.4
Potatoes	0.1	14.7	1.3
Beef, sirloin	16.1	--	16.5
Butter	85.0	--	1.0
Milk	4.0	5.0	3.3
Salt codfish	0.4	--	16.0
Eggs	9.3	--	13.1

Note the high percentages of proteins and carbohydrates in wheat flour. The butter spread on bread and the shortening used in making biscuits, supply the fat that makes these flour foods the balanced ration.

THE ELEVEN TOWNS
H. W. SMITH Editor & Publisher

Entered at the postoffice at Goodridge, Minn. as second class mail matter.

It now looks like a bone dry Minnesota for 1920. We hope it will come true, for after all state prohibition is better than local option and county option in principle. A wet spot here and there as at present makes conditions worse for such localities. The trend of times is toward total elimination of this evil, and the recent decison of the United States Supreme Court will help considerably towards that end. Hereafter it will not be so easy to ship intoxicating liquor into a dry state for will be a direct violation of the Fedaral law. When Uncle Sam gets after the boot-leggers it will not be such an easy matter to get away. It begins to look as if Mr. Booze was on his last legs.

In our last week's issue we printed a communication from Thief River Falls to the effect that the town of North at a special election had voted to spend money in fighting the establishment of Judicial 39. We are prone to ask under what law or section of the laws has a township the right to spend money in fighting a ditch proceeding where only four or five land owners are interested? Certainly public funds cannot be spent for purposes of that kind. Rumors have even reached us that the township of North and other townships that take similar steps may have to show legal authority before spending this money. Several taxpayers are planning to secure an injunction to stop this foolish expenditure of money. The fun is just begun, and we surmise that the lawyers in Thief River Falls smile up their sleeves at the prospects.

The war lords have at last driven this county into a hole which they have been striving for. In spite of the wishes of an overwhelming majority of the American people, the powers that be are doing their utmost to hurl us into the hellish whirlpool. When will the people wake up to the necessity of running their own government in place of letting the hireling of Big Business and War Munition Manufacturers do it for them? This country is not prepared to go to war, nor has it adequate cause. We can accomplish absolutely nothing by breaking with Germany. We have no army to fight the Germans and we have no navy to sacrifice. England's big navy is powerless and so would ours be, and our army, if we succeeded in landing it in France, would be but a flea-bite to the Germans. What right have we to dictate terms to Germany, when we do not dictate to the Allies? As been England and Germany it is a question of taking advantage of the strangle hold, and we should not be heard to say to one, "You May" and to the other "You Must Not."

Dwindling Wool Supply.

War and embargoes are making textile men uneasy as to the wool supply. World demand is increasing while the supply is growing less. Our own needs are twice what we raise and the chasm between domestic supply and demand is widening. Our production is less today than 25 years ago, while the population has increased 60 per cent. The difference between what we produce and what we use must be made up by imports, with the world bidding against us. The British embargo on wool shows how precarious is our position. Yet, in peace and in war, wool is an absolute necessity. Several years ago when alarm was taken at the declining beef supply many felt that the situation could not be remedied. But today cattle are increasing in the United States. More sheep and wool can be raised also if proper attention be given the industry.

Wages Go Up in Japan.

Thanks to the general business activity in consequence of the great European war the working classes in Japan are now unusually prosperous and contented, says East and West. To quote an example, hatoba coolies in Yokohama are now getting 50 yen per month, while waste paper buyers are making as much as 1.50 yen a day. Sake shops near the foreign and native bunds are now busier than ever, being well patronized by the coolie and lower classes. A fact worth recording is that the latter do not now indulge in gambling on as large a scale as formerly. Salaried men alone are the victims of the steady rise in the price of daily commodities.

Cities Take Up Child Hygiene.

More than 400 American cities, each of more than 10,000 population, have reported to the children's bureau, a branch of the department of labor, that municipal funds are being given special children's hygiene work. In more than 20 cities a special department for this work is being operated. —Providence Bulletin.

Art of Agriculture.

The art of agriculture is "doing the right thing at the right time and all the time."

Mortgage Foreclosure Sale.

Default having been made in the payment of the sum of Eleven Hundred One and 67 | 100 ($1101.67) Dollars, which is claimed to be due and is due at the date of this notice upon a certain Mortgage, duly executed and delivered by Peder H. Thoreson and Anna K. Thoreson, his wife, Mortgagors, to Goodridge State Bank, a corporation, Mortgagee, bearing date the 2nd day of December 1914, and with a power of sale therein contained, duly recorded in the office of the Register of Deeds in and for the County of Pennington and State of Minnesota, on the 2nd day of January 1915, at 3:30 o'clock P. M., in Book 7 of Mortgages, on page 561; and no action or proceeding having been instituted, at law or otherwise, to recover the debt secured by said Mortgage or any part thereof;

NOW, THEREFORE, NOTICE IS HEREBY GIVEN, That by virtue of the power of sale contained in siad Mortgage, and pursuant to the statute in such case made and provided, the said Mortgage will be foreclosed by a sale of the premises described in and conveyed by said Mortgage, viz:

The Southwest quarter (SW¼) of Section twenty-three (23), in Township one hundred fifty-three (153) North, of Range forty (40) West of the Fifth Principal Meridian, in Pennington County and State of Minnesota, with the hereditaments and appurtenances; which sale will be made by the Sheriff of said Pennington County at the front door of the Court House, in the city of Thief River Falls in said County and State, on the 3rd day of March 1917, at 10 o'clock A. M., of that day, at public vendue, to the highest bidder for cash to pay said debt of Eleven Hundred, One and 67 | 100 Dollars. and interest, and the taxes, if any on said premises, and Fifty Dollars, Attorney's fees, as stipulated in and by said Mortgage in case of foreclosure, and the disbursements allowed by law; subject to redemption at any time within one year from the day of sale, as provided by law.

Dated January 6th A D. 1917.

Notice Of Contest.

(For Publication).

DEPARTMENT OF THE INTERIOR,
UNITED STATES LAND OFFICE,
Crookston, Minnesota,
January 6th, 1917.

To August Hellquist of Erie, Minnesota, Contestee:

You are hereby notified that Henry Bye who gives Erie, Minnesota, as his post-office address, did on November 6, 1916, file in this office his duly corroborated application to contest and secure the cancellation of your Homestead Entry No. ——, Serial No. 010173 made December 20th, 1913, for northeast quarter of the southwest quarter (NE¼ SW¼ Section 1, Township 153, Range 39, 5th Principal Meridian, and as grounds for his contest he alleges that said August Hellquist has abandoned said land and has been absent without leave therefrom for a period of more than seven months, and has removed the buildings therefrom and that he is not engaged in Military or Naval duties in the service of the United States of America or the National Guard of any of its States in Mexico or along the border thereof or in any mobilization camp elsewhere, as is more fully shown by the affidavit hereto attached and made a part hereof.

You are, therefore, further notified that the said allegations will be taken as confessed, and your said entry canceled without further right to be heard, either before this office or on appeal, if you fail to file in this office within twenty days after the FOURTH publication of this notice, as shown below, your answer, under oath, specifically responding to these allegations of contest, together with due proof that you have served a copy of your answer on said contestant either in person or by registered mail.

You should state in your answer the name of the post office to which you desire future notices to be sent to you.

One of the toughest things to do is to push on a rope.

Misery loves company, and she usually has plenty of it.

A DIVER'S STORY

By HOWARD C. BEACH

There are two situations either of which is calculated, when one is in it, to chill one's blood. One is up in the air, the other under water.

I have never been up in the air, but I have been under water many times. I am, or, rather, I was, a professional diver. I didn't adopt the calling because I considered it dangerous, for when properly done diving in armor is not dangerous. The same may be said of aviation. I became a diver in order to make a living. I ceased to be a diver after receiving a shock under water.

I was hired to go down to examine a yacht that had been overturned and sunk in a gale with a view to learning where the chains were to go under her to lift her. I was told that the owner was a scientific man, a great student, an investigator. He had invented a number of scientific devices that had made him a great reputation. The wrecking company told me that he was determined to go down with me. rather for the sensation of breathing under water than for being of service.

When we stood on the wrecking boat putting on the diver's uniform I cast a glance at my diving companion, on whose head they were about to put the helmet. Why I did not then and there refuse to go down with him I don't know. I suppose it was a dislike to do something unpleasant. Singular that I should have been willing to risk a horrible death rather than do something unpleasant. However, I presume it is the same feeling that compels a man to expose himself in battle to certain death because he is expected to do so.

Mr. Cheney, my diving companion, went down by one ladder, I by another some twenty feet distant from his. The water was clear, and the sun was shining upon it, so that I could see about me to a comparatively long distance. I kept an eye on Mr. Cheney, who struck the yacht at the bow, I amidships. She had settled on her keel, and her masts were nearly perpendicular. I was about to drop over the side to hunt for a place to get a support under her when my attention was attracted to Mr. Cheney. He had mounted the gunwale and stood with one hand on the ratlines. Then he began to go up hand over hand. He stopped a short distance from the surface and began to drop, sliding his hand along the upright ropes.

This was certainly not making investigations. It seemed to me that he was amusing himself as a child might do going up and down, being nearly balanced by the density of the water. Not liking his actions, I stood where I was, and when he had gone up and down a few times he let himself down on the deck and came toward me.

Divers usually carry a knife, since there is a probability of needing one. At any rate, I had one in a pocket in my diving suit, and Mr. Cheney had been provided with one. He was obliged to move slowly through the water, and meanwhile I was wondering what his intention was in coming to me. As soon as he reached me he gave me a push and at the same time made a grab for my signal line. In the tussle that followed I lost it, and he grasped it.

I would not have believed that so much strength and agility could be utilized under water. My antagonist got his arms around my body and, pulling his knife from his belt, cut the rope connecting my waist with the men above. Then he began to dance about on the deck, evidently delighted that he could jump so high and come down so gently.

I was some thirty feet under water, with neither life nor signal line, at the mercy of a madman, for his actions confirmed that glitter in his eye I had noticed just before his helmet was put on. Why the others had not noticed it I do not know, except that there are things which, though plain to some, are invisible to others. The only article connecting me with the world above was the air pipe. I was getting plenty of air, but the maniac had proved himself stronger than I—probably on account of his madness—and if he interfered with the supply of air I would suffocate.

Having danced to his satisfaction, Mr. Cheney started for me again. I could see by the way he held his head that he was observing my air tube to see where he could cut it, for he held his knife still in his hand, evidently quite pleased whenever a beam of sunlight glittered on it through the water. I drew my own knife, determined, if necessary, to save my life by killing him. When he came within a few feet of me he jumped and, catching the tube above my head, severed it.

He must have pulled on his signal line, for I saw him rise rapidly. There was enough air in my helmet to prevent instant suffocation. I saw above me one chance for escape, the feet of my would be destroyer. I was just in time, by a spring, to reach an ankle with one hand. He tried to kick me off, but I not only hung on, I clutched the other ankle with my other hand. With a death grip I was drawn to the surface.

That is all I knew till I came to myself on the deck of the wrecking boat, my helmet removed and a number of anxious faces bending over me.

Mr. Cheney is now in an insane asylum. I am a retired diver. I have never since been under water.

How the Cats Came to Strongsville

By M. QUAD

Copyright, 1916, by the McClure Newspaper Syndicate.

It was not Hezekiah King's fault that he was born a half wit and with a twisted leg besides. His parents died when he was ten years old, and Hez became a sort of child outlaw. He wandered here and there till he finally settled in Strongsville.

Hez found the farming class much more sympathetic than the villagers, but he was imposed on by them to a certain degree. When he had got to be a youth of fourteen or fifteen he could hoe corn or potatoes or chop and split wood as well as almost any man. They would hire him by the week and give him such food and lodgings as they saw fit, and when he was through with his week he was given some old clothes or a few cents in money.

The years passed on until Hezekiah was twenty, and he was more of an outlaw than ever. A man named Brooks went to work in the sawmill at Strongsville. He was an old bachelor, and he rented a small house and lived alone. In passing the boy on the street one day he must have given the victim a look of sympathy, for when he got back to his house again he found Hezekiah seated on his doorstep. He invited him in and gave him a meal and a good bed. From that day the unfortunate had a home.

To make clear what followed the reader must know that Strongsville had a strong antipathy to cats. It was founded on sanitary principles. There had once been an epidemic of scarlet fever and again an epidemic of measles, and the doctors had agreed that the germs of both were carried from house to house by the feline population. Thus it came about that the cats were exterminated to the last one and the mice had a play day every day in the year. The old bachelor learned this fact as soon as he talked of renting a house in the village. He was told that if he brought a cat along with him she would certainly be poisoned off in short order.

One day after Hezekiah had had a home for six months he went to work for a certain farmer at wages set by Mr. Brooks, who had become a guardian to him. After working for three or four days Hezekiah unearthed a box of gold coin amounting to $5.000. They were English coins and had been buried in the long ago—so long ago that the box had become mere punk. He carried the money home with him wrapped in his old coat, and it sent forth metallic clinks as it was thrown on the table. He was smiling almost for the first time in a year, and after an effort he managed to say:

"I dug it out of the ground."

"Did you tell the farmer?" asked Mr. Brooks when he had recovered from his astonishment.

"Not a word," was replied.

"Well," continued the old bachelor after the money had been counted, "this find has made you rich, but don't say anything about it to any one. The people of this town have used you shamefully, and I want to see you get even with them. You know what I mean, don't you?"

In reply Hezekiah's face lighted up and he nodded his head. He had been aware for a long time that no one had played him fair, but he felt his helplessness to resent it.

In thinking how he might revenge the young man's wrongs the old bachelor brought up the cat question, and he soon had his plans laid. The next tin peddler that came along was stopped and held in private conversation for half an hour, and then he winked and laughed and drove away. He stored his tinware temporarily and loaded up 200 felines in its place.

That wagon re-entered the village at 11 o'clock at night, when every man woman and child was sleeping his first sleep. It paused in front of the town hall, and the door was opened, and the cats came bouncing out.

Two hundred cats might have been exterminated in time, but the tin peddler returned next evening with 200 more re-enforcements and again the third night. The town had now been turned into a cat town. It had more cats walking the fences or seated around the back doors than any town of four times its size in this state. By night it was a constant serenade that prevented sleep except at brief intervals. There were enough cats to carry the germs of a dozen epidemics. It is a cat town today. Men were hired by the week to shoot or trap them, but kittens were born about as fast as old cats were killed off, and at last the people gave up and settled down to bear the infliction with what pains they could.

After the cat invasion was a month old the bachelor said to the half wit:

"Hezekiah, you know what a cat is, don't you?"

Hezekiah nodded and grinned.

"After paying all expenses of dumping 600 cats into Strongsville I have $4.500 of your gold left. I am going to put it in the bank for you and send you to New York city to see if the surgeons can make you over. I hope they will be able to help you. If they can't, you can come back home and live with me the rest of your life. Do you understand what I mean?"

The surgeons helped him some—enough so that when he caught sight of twelve or fifteen cats sunning themselves on some householder's veranda he could appreciate the situation and go home and say to Mr Brooks:

"There were just three barrels of cats on Brown's veranda—just three barrels—and Brown was out there looking at them, and looking very sad."

A Romance at Lucerne

By MARTHA V. MONROE

A young man entered a hotel at Lucerne, Switzerland, and, taking a pen, was about to enter his name when he noticed on the page, just above where he was about to write, the name of Arietta Townsend Kentwood, U. S. A.

An hour later Miss Kentwood was standing at the hotel entrance preparing to go out when she saw a trunk carried in bearing on an end the name of Lawrence Lowrie. Realizing that the owner of the trunk had just arrived, she sauntered into the office and glanced at the register. The ink was scarcely dry in the name of Wendell B. Colgate, and that was the only name entered since the day before.

Miss Kentwood's view of Mr. Lawrence Lowrie's name on his trunk spoiled a very pretty game.

Both Mr. Lowrie and Miss Kentwood were very rich. It is a well known fact that rich persons marry rich persons. This is natural. A fortune can only be matched by a fortune. Mr. Lowrie desired to marry a fortune, and Miss Kentwood had been suggested as a suitable party for him. Miss Kentwood had the same desire, and Mr. Lowrie had been suggested to her as a husband. Neither had seen the other. It occurred to Mr. Lowrie to win Miss Kentwood's heart as a poor man, and it occurred to Miss Kentwood to play the same game with Mr. Lowrie.

Lowrie secured an introduction to Miss Kentwood at the casino as Wendell Colgate. He found her quite ready to improve the acquaintance. She did not know whether he knew of her fortune or not. But he pretended to be ignorant of it, and she was satisfied that he did not. He believed that the lady was smitten with him, and she believed that with him it was a case of love at first sight.

There is no better courting ground than Lucerne. The town is quaint. It has the Casino. Every evening a roulette wheel is spinning with a crowd around it risking silver pieces from 1 franc upward, while in another part of the premises an orchestra is discoursing classical music. Refreshments are served by girls in the attractive Swiss costume.

As to the environs of Lucerne, one may ascend the Righi or one of the other surrounding mountains or may make excursions on the beautiful Lake of the Four Cantons. Mr. Lowrie and Miss Kentwood made trips on the lake or ascended the mountains. In the evening they lounged in the Casino.

One night while looking at the gamblers Mr. Lowrie suggested that they each risk a franc just for fun. Miss Kentwood demurred on the ground that she was restricted in the amount she possessed for her travels, and even the loss of a few francs would embarrass her. Mr. Lowrie said that he, too, needed to be economical, but he thought he would risk a franc. This decided Miss Kentwood to make a like investment. Mr. Lowrie placed his franc on one number, Miss Kentwood on another.

Both won, and both reinvested their winnings.

Persons came and went, standing about the roulette table for a time, looking at the gambling. Now and again some young man or old woman would put down a franc or a 5 franc piece and when it was lost would pass on. Some, like a fly caught on sticking paper, would stay, usually losing all their spare cash. Mr. Lowrie won quite a sum, then lost it and quite a larger sum. Miss Kentwood soon evinced a disposition to plunge. When their evening's amusement was over Mr. Lowrie was minus 1.200 francs and Miss Kentwood 700 francs.

The next morning there was an exchange of notes between them; not only written notes, but banknotes. Mr. Lowrie wrote inclosing 700 francs and saying that he had drawn the balance of his letter of credit to restore a loss that would doubtless fall heavy on Miss Kentwood. Miss Kentwood wrote inclosing 1.200 francs, begging Mr. Lowrie to accept it as a loan. She would be obliged to cut short her trip, but this was more than made up by the pleasure of serving one whom she had come to appreciate highly.

On receipt of this noble sacrifice Mr. Lowrie cocked his head much as one who had discovered a "mare's nest." Miss Kentwood received Mr. Lowrie's benefaction while her maid was preparing her toilet for breakfast. She burst into a laugh. Mr. Lowrie was to call at 10 o'clock, and when the hour arrived she went to the hotel reception room, dressed to go out with him, but instead of being in plain clothes she wore a $300 street costume. Advancing to her visitor, she handed him his donation. He accepted it and returned hers.

"Mr. Lowrie," she said, for the first time addressing him by his real name, "we have spoiled a theme for a novel."

"Or a picture play."

"Romance and riches are incompatible."

"Just so."

"If you care to join our fortunes I will refer you to my uncle in New York, who is my business manager."

"I will call upon him on my return to America."

"Let me see. We were to take a walk together this morning."

"Being too poor to pay for a ride."

Both laughed.

"I think I will charter a steamboat and we will make the tour of the lake."

"Do so. My maid will serve for chaperon."

NEAL *of the* NAVY

By: WILLIAM HAMILTON OSBORNE

Author of "Red Mouse," "Running Fight," "Catspaw," "Blue Buckle," etc.

Novelized from the Photo Play of the Same Name Produced by the Pathe Exchange, Inc.

(Copyright, 1915, by William Hamilton Osborne)

SYNOPSIS.

On the day of the eruption of Mount Pelee Capt. John Hardin of the steamer Princess rescues five-year-old Annette Ilington from an open boat, but is forced to leave behind her father and his companions. Ilington is assaulted by Hernandez and Ponto in a vain attempt to get papers which Ilington has managed to send aboard the Princess with his daughter, papers proving his title to and telling the whereabouts of the lost island of Cinnabar. Ilington's injury causes his mind to become a blank. Thirteen years elapse. Hernandez, now an opium smuggler, with Ponto, Inez, a female accomplice, and the mindless brute that once was Ilington, come to Seaport, where the widow of Captain Hardin is living with her son Neal and Annette Ilington, and plot to steal the papers left to Annette by her father. Neal tries for admission to the Naval academy, but through the treachery of Joey Welcher is defeated by Joey and disgraced. Neal enlists in the navy. Inez sets a trap for Joey and the conspirators get him in their power. In a struggle for possession of the map Hernandez, Annette and Neal each secure a portion. Annette sails on the Coronado in search of her father. In Martinique Annette and Neal are captured, but are rescued by a sponge diver. Inez forges identification papers for herself as Annette. In an insurrection Neal and Annette are again captured, carried to the Sun City and Annette is offered as a sacrifice to the sun god. They are rescued by marines from the Albany. Landed in Tortugas, Annette and Neal are captured and exposed to yellow fever infection by Hernandez, but are rescued by sailors from the Albany. Inez tries to rob Annette and escapes. On her way to Chantillo Annette is captured. Neal is promoted and leads a party of transferred men toward Chantillo, but is caught in a train wreck on the way. Hernandez and Inez present the false identification papers to Brother Anselmo at Santa Maria mission. Ponto is caught and killed in his own trap, set for Annette. Annette proves title and turns over Lost Island to the government. Welcher dies in a remorseful effort to save her from Hernandez. Annette and Neal, on their way to Lost Island, are wrecked on a cannibal island by Hernandez' trickery. The brute is accepted by the cannibals as their god.

THIRTEENTH INSTALLMENT

WHITE GODS

CHAPTER LV.

Anthropophagi.

A white face—a white beard! Potent factors even with a savage tribe. The man-eaters of this South Pacific island, cringed in terror before the blank and staring eyes of the big Brute.

His blank and staring eyes! They, too, had their weird effect.

"Look—see," whimpered this crowd of latter-day cannibals, the one to the other, "he sees across the world—he talks with spirits—he is a god!"

The Brute, save for the slight weaving of his massive figure from side to side, stood quiet and impassive. He was wholly unafraid.

Behind him, however, crouched another figure that told another story. Hernandez, his hands still manacled, trembled with fear. But he was still resourceful—he knew his power.

"Beast," he whispered—and tremulous though it was, it still was a command, "Beast, you've got them down. Seize the foremost spike and run them through. Be quick."

The Brute heard his master's voice, and immediately obeyed. He stooped, and stooping, wrenched from the foremost naked figure the deadly weapon that the latter held within his grasp. It was relinquished without a struggle. Its former possessor stretched himself full upon the ground, waiting the death thrust. His savage companions drew back upon their haunches, their eyes glowing with religious fervor.

"A sacrifice," they cried, "a sacrifice."

But there was no sacrifice. Instead, the Brute merely held the spear aloft for a moment—held it in the air with both his hands. Then he brought it crushing down across his knee, and broke it clean in twain.

"Eye-yah!" There was an ejaculation of wonder—of brute applause for brute strength.

The erstwhile possessor of the spear—as ugly-faced an individual as ever ate a pound of human flesh—touched the Brute upon the shoulder and pointed toward the jungle.

"Follow him, Beast," cried Hernandez a bit impatiently, "nothing can harm us now."

For the first time the Brute seemed conscious of his master's presence. He turned and faced Hernandez. He grunted in uncertainty.

"Look—see," said the leader, in his guttural accents and primitive tongue, look—see. This man is his captive. The god is hungry. He would eat."

The leader pointed to the manacled hands of Hernandez. He made a sign—a sign immediately obeyed. A dozen blacks sprang forward, seized Hernandez and swung his body to their shoulders. Then at another word of command, they started off, jog trot toward the jungle. Hernandez struggled like a maniac, but to no purpose. Then he yelled:

"Follow, Beast, follow," he cried. "Save me. Come."

The Brute followed, wondering. Not for one instant did he suspect the man-eaters had sinister designs upon his master.

Finally they entered a wide clearing. In the middle of this clearing was a village of straggling huts and tents. It was a ghastly village—an ill-smelling village. Scattered about it were skulls and bones enough to furnish Jolly Rogers to a hundred pirate ships. It became clear then to Hernandez that the party on the beach—the small company of cannibals that had surrounded him and his companion, were merely a side issue. Here was a city—here a multitude. He had little time, however, for reflection. He was flung violently to the ground. The leader of the little band touched the Brute upon the breast and made a sign.

"Look—see," he signed. The Brute followed, staring, mildly wondering, possibly—perhaps not wondering at all.

The leader led the way to a rude hut, larger than the rest, and grotesquely daubed with clay. In front of this he paused and chanted some weird song. A figure, huge and unwieldy, appeared in the doorway. Huge and unwieldy as he was, he was a pygmy compared with the big Brute.

He was a chief, this man, and he looked it, every inch. He was the greasiest, the dirtiest, of all the greasy, dirty crew. In his right hand he held a bone. Now and then he gnawed upon it—now and then he used it as a scepter. He extended it and touched the approaching native on the forehead. The latter bowed—then turned and pointed at the Brute.

"This," he jabbered in his native tongue, "is a god, and risen from the sea. He is hungry. He would eat."

The chief in turn threw himself upon his face. He called to all the multitude, and bade them do likewise. Then he remembered. He rose and signed to the Brute.

"He is hungry," he repeated. "The god would eat."

Then he led the way to the fire. The Brute stared at it contemplatively. He smiled.

"The god is pleased," exclaimed the chief, "let us therefore eat."

He cast from him the bone he had been holding. He made another sign. The Brute glanced to one side. There upon the ground, wild eyed with fright, lay three human beings.

Upon one of these miserable victims a dozen men now pounced. They lifted him, writhing, into the air, and started toward the flames. They were about to fling him across the flames when something happened.

The Brute understood. With one bound he was upon them, and with wide sweeps of his powerful hands and arms he scattered them right and left.

There was a wild murmur against this outrage—a sudden handling of spears and stone heads, but the Brute never heeded the outcry. Instead he calmly stooped over each victim, one by one, and tore the bonds of each apart, and set them free. He held back the angry mob while the three captives trotted nimbly off into the nearby jungle.

The chief stared at him astounded. He might, indeed, have brained the Brute with his club had he not felt the terrific grip of the Brute upon him. Then he realized—once more—that the Brute was not a mere man, after all.

There was a wild clamor, but the chief stilled it with uplifted hand. Then the leader of the beach band stepped forward and saluted.

"He has his own captive," he whispered to the chief, "see, yonder. He brought him with him, out of the sea."

The chief understood. He gave an order. A dozen more braves sprang toward Hernandez and bore him to the chief. The chief pointed toward the poles and the green vines lying torn upon the ground. In an instant, Hernandez lay prostrate—in another instant half his clothes were torn from his back.

"Beast," he shrieked, "save me, Beast."

The Brute saved him. He charged into their midst like a raging bull—he tore Hernandez from their grasp.

The Brute snarled in his throat—he kicked and clutched and clawed at the little nucleus of savages. They fell back before him as before a whirlwind—they were stunned.

Again, murmurs. But again the murmurs were silenced by the chief himself.

"He is his own captive," said the chief to his followers, "let him do as he will."

Hernandez, once upon his feet, was not slow to act.

"Quick," he said to the Brute, "get a stone—two stones. Knock these wristlets from my hands."

He held out his manacled wrists—the Brute understood, and obeyed. With his two hands free, Hernandez' brain was working once again. Quick as a flash he stooped and picked up a short piece of twisted vine. Raising his hand high in air, he brought this piece of vine—a stinging, snakelike whip—swishing down upon the head and shoulders of the Brute.

The Brute cowered, cringed, whimpered. Hernandez folded his arms, stared sternly at the Brute for one swift instant, and then turned and met the glances of the chief and all his tribe.

The chief was startled. He plucked his lieutenant by the arm.

"Look," said the chief, "the big man is a god, but this is his master."

CHAPTER LVI.

S. O. S. on Land and Sea.

Neal, from quite another portion of the beach, scanned the horizon with alarm.

He shook his head. The horizon line was clear—there was no hint of smoke.

He turned to the first mate of the wrecked fruit steamer that lay stranded on the reefs.

"We've got to get word to the Missouri, somehow," he said, "beside, we've left Annette and my mother starving back there. Let's return."

Neal found his mother and Annette where he had left them.

Cocoanuts and clams, hurriedly gathered, supplied them with a satisfactory meal.

Neal stretched his arms. "I never can think upon an empty stomach," he remarked, "so I'm just beginning to dope things out. Look at friend sea," he exclaimed, "she's like a millpond. The tide's out. There's not a wave splashes over the wreck. I'm off."

"Where to?" queried his mother in alarm.

"I'm going to row over to the wreck and help myself—to some S. O. S."

He strode to the water's edge. He beckoned to the first mate.

In another moment they were launched and pulling with even, steady strokes toward the wreck beyond.

They made fast the boat, shipped their oars and clambered up the side of the almost submerged fruit steamer.

"Good," said Neal, "the wireless room is intact."

He sent out his call—cast it to the four winds—his messenger, seeking everywhere for the Missouri.

On the Missouri the wireless operator got it—feebly at first.

"S. O. S." clamored Neal.

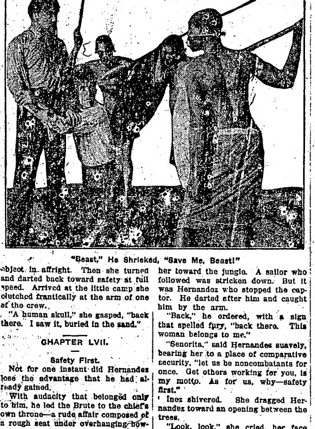
"Who are you?" queried the battleship.

Neal told him.

"All right," said the Missouri, "we'll be there in three shakes of a lamb's tail." Or words to that effect.

On shore, meantime, Annette, the wanderlust ever strong within her, had wandered up the beach and out of sight. The solitude was appalling, but not unpleasant.

Tripping along gayly, she had stumbled over something half hidden by the sand. Her firm step had loosened it—but it had nearly sent her sprawling. She drew back, regarding the object in affright. Then she turned and darted back toward safety at full speed. Arrived at the little camp she clutched frantically at the arm of one of the crew.



"Beast," He Shrieked, "Save Me, Beast!"

"A human skull," she gasped, "back there. I saw it, buried in the sand."

CHAPTER LVII.

Safety First.

Not for one instant did Hernandez lose the advantage that he had already gained.

With audacity that belonged only to him, he led the Brute to the chief's own throne—a rude affair composed of a rough seat under overhanging bowers.

"Go—sit," he exclaimed to the Brute. He enforced the command with a shower of blows. The Brute obeyed.

"Hungry," said the eye and hand of Hernandez, to the chief, "the god still hungry—and the master of god, very, very hungry, still."

The chief spread his hand. He pointed toward the jungle whence had sped the several captives unbound by the Brute.

Hernandez smiled—a deadly, wicked smile.

"Beast," he exclaimed, "stay where you are." He beckoned to the chief.

"You come with me," he signed.

The chief nodded, beckoned to a number of his bodyguard, and followed Hernandez through the jungle. At a knoll on its outskirts Hernandez held his fingers to his lips. Then he pushed the chief's head through the bushes.

"Look," he said, enforcing the command

The chief looked. He looked far out across the placid waters of the Pacific, and there he saw a wreck.

"Um-m!" exclaimed the chief, smacking his lips.

"Ah," laughed Hernandez to himself, "you know what that means all right."

The chief started through the bushes at breakneck speed—but Hernandez restrained him, keeping his finger on his lips.

"Me," signed Hernandez, "follow me. Do what I do."

For one instant he looked about him, getting his bearings. Then he started on. For many minutes the party skirted the edge of the jungle, never once showing itself, and moving always silently as the grave itself. At length Hernandez once more halted—this time on the edge of a grove of palms. Holding his cannibal crew back, Hernandez beckoned to the chief to advance alone. The chief obeyed. With the swiftness of two savages, Hernandez and the chief darted behind the trunks of two separate trees. Hernandez pointed toward the beach.

"White meat, you old gourmand," whispered Hernandez, "white meat. And very tender."

Down on the beach, busying themselves about their self-appointed tasks, were Annette and her foster mother. There were several members of the fruit steamer's crew—all white. There was Inez Castro—also white—but an outcast, sitting, brooding by herself.

Hernandez counted the men.

"We need four to one, at least," he said to himself. Then he nodded to the chief and held up the fingers of both hands several times. The chief understood. He was a warrior. He knew that much safety lay in numbers. He beckoned to two of his men and gave them orders. They crept back, silently through the trail.

Hernandez and the chief wriggled back into the undergrowth and then sat down to wait.

Annette's party suddenly made up its mind to decamp. The discovery of the skull upon the beach was a disturbing fact.

"When Neal comes—" said Annette.

"Right," said a sailor, "we'll put it up to him."

He glanced casually toward the grove of palms, this sailor. Then with an oath he sprang to his feet.

"Boys," he cried aloud, feeling for a weapon, "we're in for it. Women in the shed. Look, here they come."

The other sailors, with the swiftness of seamen in a sudden squall, were upon their feet, each with a weapon in his hand. They forced the women into the hut and formed a circle, guarding it. And then broke the storm.

With the yell of a thousand demons, the black man-eaters were upon them.

One warrior seized Inez in his grasp, and with a cry of triumph darted with her toward the jungle. A sailor who followed was stricken down. But it was Hernandez who stopped the captor. He darted after him and caught him by the arm.

"Back," he ordered, with a sign that spelled fury, "back there. This woman belongs to me."

"Senorita," said Hernandez suavely, bearing her to a place of comparative security, "let us be noncombatants for once. Get others working for you, is my motto. As for us, why—safety first."

Inez shivered. She dragged Hernandez toward an opening between the trees.

"Look, look," she cried, her face rigid with terror, "its horrible, horrible, horrible."

A short time later, by the side of Hernandez, she stumbled blindly through the jungle—in the midst of a howling, panting mob of half-naked warriors. The warriors were the victors. And they bore with them the spoils—two women, still alive, a small squad of torn and battered sailors, and a few silent figures—silent forever.

"What are they going to do?" wailed Inez.

Hernandez shrugged his shoulders. "Its out of my hands," he said, "but I've got to see it through. I've got to know what happens. I've got to be there—or else they'll get me too. We'll be lucky to escape. But we'll escape, you and I, never fear. I've arranged for it. I've arranged for—safety first."

CHAPTER LVIII.

The Feast.

Because Annette Ilington and her foster mother had ever lived in the vicinity of New York—because they had always been within the newspaper zone—because they had enjoyed the advantage of telephone and motor car, and motion picture because of all the luxury and civilization surrounding them, they never once supposed that man-eating savages still existed.

Struggling with her captors, Annette stumbled on blindly through the jungle. Behind her she heard the muttered oaths of the male members of her party. Just once she heard a whisper.

"Don't tell the women—for God's sake don't tell the women. They'll be knowing, soon enough."

At that moment there was a distant shout that grew stronger and stronger. The cannibal crew answered it—it rollicked back and forth. Then in the near distance Annette heard the breaking of bodies through the undergrowth and a fresh crowd of savages appeared, yelling like mad. This new crowd seized Annette and swung her to their shoulders, and with her, ran through the undergrowth like deer.

And then—they dashed into the clearing. They darted across the open space, still with Annette in their clutches—and laid her down before the Brute—who still sat on his crude dais, staring, always staring into space.

Annette struggled to her feet and looked wildly about her. Her foot touched something and she started back—looked down.

The object was a skull.

Annette shrieked in terror—she tried to hide her face but could not.

She saw the fire—she looked into the eyes of her fellow captives. Upon their foreheads sweat stood out in beads—cold sweat, the sweat of fear.

She asked a question of them with her eyes, but they turned their heads away.

Then, understanding at last, Annette swooned—slumped into a heap at the feet of the Brute.

The Brute staring, always staring, rose to his feet. He stooped down. But before he could touch the girl, the chief intervened. The chief himself lifted her, and held her where the god man could look upon her. He mouthed and smacked his lips.

And the Brute, recognizing Annette, nodded his head and smiled with that vacant smile of his.

"Eye-yah," yelled the multitude of savages, "the god is hungry—he will eat."

"All—all will eat," cried the chief in triumph. "This white girl first."

He made another sign, and a dozen savages broke away and came back with huge logs, which they swung into the dying fire, sending its sparks high into the air. They seized one of the long poles, and tied Annette to it—tied her with green, strong vines.

They waited for a moment to let the fire gain headway. . . .

They clustered round her, danced about her—touched her. . . .

Down on the beach, two merry men leaped out of a lifeboat and drew her well upon the shore.

"The gang—" began the mate. Then he stopped. With a wild yell he darted up the beach, Neal by his side.

"What's happened," stammered Neal, "where are—"

He said no more. By this time they were standing on the blackened embers of a scattered fire—by the rude hut shattered and broken—and by two or three red splotches that stained the white sand and soaked it.

Neal, his face gone white with terror, clutched the mate by the arm. "Blood," he gasped. "blood. Whose blood? You tell me that."

Then the two men—only two—still side by side, sped on toward the jungle. The footprints led that way. At the grove of palms they stopped. They glanced about uncertainly.

"Here," cried Neal, darting forward, "a bit of Annette's dress. Come on."

It was easy now; following this trail. But ever and anon Neal glanced at his comrade.

"Whose blood?" he demanded, "tell me that."

And the two men—only two—went on. . . .

At last, guided now by shouts and cries of triumph, they reached the clearing and peered across it.

"My God," cried Neal aloud, "look—look."

Two savages—two at first and then a dozen—had seized the long pole and had begun to swing it out across the fire. Upon it, limp, unconscious, tightly bound, lay the form of Annette.

Neal was across the clearing in a bound.

Like a maniac, Neal charged into the group of warriors who held one end of the long pole and stripped them from it. With the same fearful energy he charged into the gang at the other end and knocked them down. Then, bestriding the prostrate form of Annette—and he knew not whether she was alive or dead—he squared himself and howled defiance.

"Come on," he cried, "the whole bunch of you. Come on."

Over in a hut, crouched and cowering, was Inez Castro—watching with eyes wide with fear.

"Hernandez," she shrieked, "Hernandez—here."

Hernandez crept toward her. "You are right, Senorita," he said, his breath coming and going, his heart beating like a trip hammer with excitement, "you are right. It is not in our hands. Now is our good time. Let us get away."

"Horrible," cried Inez.

"Therefore—away," went on Hernandez leading her by the hand, "away from here—and to our fortune, Lost Isle."

"Horrible," repeated Inez, holding her hand across her face.

"Ah," said Hernandez, now dragging her with him, a bit roughly, "but they are all accounted for—except the boat. And the boat is on the sands. Come—you come with me."

Almost lifting her from the ground, he darted with her across the open space, unnoted by any of the savage crew and safely reached the jungle trail. Reaching it, he put his hand upon his lips.

"Careful," he said, "we know n whom we may meet. Careful. Com We're safe."

Back before the fire, two men foug back to back. One was Neal—and o the mate. They fought like tigers for a moment, but not more. Twen to one the man-eaters hurled the selves upon two white men and bo them, senseless, to the ground.

The Brute meanwhile, was gazi wildly all about him—looking for h master and looking in vain. Suddenl he of all men, saw the exit of He nandez—saw him steal away. At fir he may have been impelled to follow—for he started off. But a close o server might have noted an expressi of relief cross his countenance, for sank back once more upon his and watched the fight.

He even laughed—to him it seeme like a new game. A fight was child play to the Brute. But when the u conscious forms of Neal and the ma were borne away, he seemed alarme He started once more to his feet.

"Eye-yah," cried the chief to his f lowers, "the white god hungers. C with the feast."

Once more the bearers seized A nette—still lashed firmly to the pol Then for the first time the Brute re ized that something was wrong—here was horror.

He darted into the midst of the wa riors and swung his arms.

"No—no," he cried.

But the mere word of a god cou never stop them now. They were hu gry—they had fought for spoils an the spoils were theirs. They shou dered him aside, and went on. . . .

They didn't get far. The Brute wa fresh—he had been resting. With on fell swoop he once more charged upo them, and tore them—broke them wi his hands, broke their backs across h knees—cracked their skulls with single blow. He swept them all befo him, carrying the fight across th clearing. He seized one of the lon poles and mowed them down lik grain.

He was more than one man—he wa ten. But he was only ten—n more. . . .

Meantime, Neal's captors, dete mined on a little private vengeanc had trussed him up, or tried to. that tough young man, having partia ly revived, permitted his captors—there were but two—to go just so fa Then he came to life, and applied th gentle art of jiu jitsu to each of the in turn. It was effective—and bon breaking.

Then Neal saw—and his hea leaped. Annette for the moment wa deserted. The fight was centered o the Brute. Neal sprang to Annett and with deft fingers loosed her bond He lifted her gently to his shoulde and started off.

He was too late. For the fight w the Brute was over. For one instan the Brute had left open a vulnerabl point—his defense had failed. With mighty swung of a mighty war clu one of his antagonists dealt him swinging, deadly blow upon the hea The Brute fell like a log.

Then somebody saw Neal and A nette. . . .

Like a tidal wave, the whole crow surged back to their fair victim.

Neal, surrounded, dropped Annet to the ground and held his hands in air.

"God help us—help us," he cried desperate need.

At that moment there was a ringin volley of rifle shots. A dozen savage fell dead. The rest turned to fac another foe—a new kind. Out of th bushes sprang a squad of marines fro the Missouri. They had landed in re sponse to Neal's wireless. They ha struck the trail. They had arrived—just in the nick of time.

"Pick your man," cried Neal, "fire—ah."

With a wild shout the savage cre turned and fled—fled in vain, each pu sued by a man in uniform, each ou matched by one man.

And when the squad had finishe there was no village—and no villager

Neal saluted the officer in charg and apologized. "Wasn't my busine to give orders, sir," he smiled, "but you'd been in my place. . . ."

The officer saluted in his tur "Don't worry, son," he said, "you'll b in my place if you keep on fight like that—you'll keep going up—an up."

Neal revived Annette—no very dif cult task, for Annette Ilington ha inherited from some source remark able strength and endurance and wo derful nerve. He found his mothe still insensible, but suffering only fro the shock.

"It's a good thing," Annette whi pered to him, "that she didn't see all."

Neal clenched his hands. "It's bad thing any of us saw it," he e claimed, "somebody's got to pay f this—somebody's got to pay."

With Annette clinging to him h strode over to a group of seamen wh clustered about an object on ground. The lieutenant was bendin over the Brute.

"He still lives," said the lieutenan "he may pull through—but that's no saying much."

Annette kneeled down by the figur of the Brute. "He must live," sh murmured, "he's saved my life—no once but many times."

In a small boat out at sea—a boa set with an improvised sail, Hernande and Inez Castro glided over the face of a placid ocean.

"On—to Lost Isle," cried Hern in glee.

Inez stared, motionless, expressionless, into space.

"Horrible," she moaned dully, "ho rible. Oh, God."

Sam Olson from Black Duck dropped in at "Camp Sub Urban" last Friday for a short talk on Backwoods topics. Mr. Olson is a professional hunter and trapper and was on his way to Reiner township where he expects to hunt wolves during the rest of the winter. He made his way by rail to Gully and walked the rest of the way. Quite a sprint even for a hunter through the blizzard.

Knute Tellefson was a caller at H. C. Iverson Tuesday on business matters

Sakarias Hole had a large supply of wood sawed up the first part of the week which he says is going to last him until next fall whether he gets married or not.

Ole Tharaldson made a short call at the Hans Svare home Thursday evening.

A telephone meeting was held at Erie Saturday evening.

Ole T. Rude made a short call on Ole Tharaldson, Thursday.

C. O. Johnson assists with the chore work at Knute Sunsdahl while the latter is employed in the lumber woods for the rest of the winter

Hans Svare is hauling lumber from Neptune to rebuild his house.

Tellof Haret called on Ole Tharaldson Thursday evening.

Thelma Haret and Opal Tharaldson called on Mrs. Ole K. Lien Friday evening.

Rhinehart Jacobson made a flying trip to Erie Friday afternoon.

Gilmour Tharaldson was seen hauling hay, Saturday.

Mr. and Mrs. H. O. Tommerdahl and family were callers at the Ole Tharaldson home, Sunday.

Ole Tharaldson called on Halvor Bjornearaa Wednesday evening.

H. C. Iverson is so delighted with his new "Alladin" gas lamp that he says, its the best ever, it gives double amount of steady light and uses hardly more than half as much kerosine as the common open flame lamps Compared with other mantle lamps the "Aladdin bids fair to hold its own and then some. By its use you can save at least $8.00 in a year burning it three hours a night.

Gilmour Tharaldson made a short call on Sub Urban Wednesday evening.

Halvor Syverson and son Erick are busy chopping wood for G. G. Olson.

Knute Danielson is busy hauling wood these cold winter days.

Eddie Vatne called on his brother Tellof Vatne one day last week.

Gilmour Tharaldson was doing some business in Erie Thursday.

Henry Svare has been busy hauling wood for Knute Berg.

Henry Dahlen called on Knute Roysland Monday evening.

Mrs. Dalmo and Christain visited at Mrs. Henry Dahlen one day last week.

Tellof Haret has been busy hauling hay for Ole Kein while the latter is employed in the lumber woods for the rest of the winter.

Mrs. Hans Svare called on Mrs. Knute Roysland Monday.

Halvor Syverson and Tellof Haret were attending to business matters in Goodridge, Wednesday.

Melvin Svare was doing some shopping in Goodridge Thursday.

Mrs. Theodore Jacobson is on the sick list this week.

Mrs. Dalmo called on Mrs Jacobson one day last week.

Knute Roysland is busy hauling wood from Ed. Arverson's grove.

Mrs. Oliver Tommerdahl calls up Otto Parnow by telephone and tells him he can have another brush chase after wolves, and he gets his horse and is on the trail at once and he lands in H. O. Tommerdahl's grove where he strikes a fence and leaving his horse there he starts on foot but finds it slow walking. How's wolf hunting Otto.

At The Grand.

There will be a show at the Grand Theatre, Saturday evening. The eleventh installment of Neal of the Navy will be shown, as well as Hearst Pathe News No. 6 and a corking good comedy entitled, "Like A Double".

Come and spend the evening at an up-to-date Movie house.

Masquerade Ball.

A Masquerade Ball, and the best show of the season will be given at the Grand Theatre, Thursday evening Feb. 22nd. Show to commence at 8 P. M. Music for dance will be furnished by Lowery's Orchestra, of Thief River Falls. A prize will be awarded to the best dressed Lady, the best dressed gentleman, the most comically dressed lady, and the most comically dressed gentleman. Dance tickets $1.00. Masks are on sale by P. P. Palmer.

The following is a copy of Bill as passed by the Senate and House of Representatives.

An Act

To restore homestead rights in certain cases.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the passage of this act Act any person who has heretofore entered under the homestead laws and paid a price equivalent to or greater than $4 per acre, lands embraced in a ceded Indian reservation, shall, upon proof of such fact, if otherwise qualified, be entitled to the benefits of the homestead law as though former entry had not been made: Provided, That the provisions of this act shall not apply to any person who has failed to pay the full price for his former entry, or whose former entry was cancelled for fraud.

(Copy of telegram received last Thursday evening.)

Washington, D. C.
February 8th, 1917.

Wilhelm Michelet, Esq.,
Thief River Falls, Minnesota.

Senate amendment to Ferris Bill agreed to in the House today. This passes the bill which gives the settlers on the Eleven Towns the right to take another homestead.

Halvor Steenerson, M. C.

The effect of this bill is that it gives to all settlers on the Eleven Towns who did not have a homestead before filing on the Eleven Towns an opportunity to make another homestead entry. The bill has now passed the Senate and house of Representatives and will become law when signed by the President.

No Government Work On Stream.

Word has been received from the war department that the proposition for the improvement of the Red Lakes and the Red Lake river from its outlet to its junction with the Red River of the North at Grand Forks, with a view to devising plans for regulating works whereby the level of the Red Lakes and the flow of the Red Lake river may be controlled in the interest of navigation, has been reported upon unfavorably by those who have investigated the matter.

The investigation was authorized by an act of Congress July 27 last year. The principal grounds upon which these adverse conclusions are based are that the cost of the proposed improvement, by regulating works at the outlet of the lakes and the dredging of the river from the outlet of the lakes to near Highlanding would be so great, and that the present and prospective commerce is so small, that no reasonable co-operation by the United States on the grounds of navigation would be warranted.

Just what action will be taken in the future is undecided at this time, but there is still an opportunity to appeal from the conclusion above announced to the board of engineers for River and harbors, a permanent body sitting in Washington, to which all examination and survey reports of this character are referred. The appeal may be made either orally or in writing, and should be in possession of the board by March 3, at the latest.

If, as is quite probable, an appeal is made and the above time is not sufficient an extension is possible, but such action must be communicated to the board without delay.

The above information was received from Col. Edward H. Schulz, of the corps of engineers, located in St. Paul, who recently conducted the hearings in this city following a survey of the lakes and river by E. J. Dugan some time previously.—Thief River Falls Times.

Sometimes the Result.

"People who snubbed my wife made me rich."

"How so?"

"Oh, I had to struggle until she got into a position where she could snub them!"—Rehoboth Sunday Herald.

Communication.

Editor Eleven Towns:—

Your request for an article on the "Plan of Assessment" of Judicial Ditch No. 39, can hardly be complied with at this time. I have not had an opportunity to see the Viewers Report as yet, but I suppose that the statements made in the last issue of the Thief River Falls Times are about correct. According to the Times the assessments are made such that when added to all the previous leins they will aggregate $5 per acre. Of course the assessments are made so as to provide an ample margin above the estimated cost, possibly 20 per cent or 30 per cent. It is a usual practice to provide about 20 per cent. In the cases of No. 20, 13 and 18, the margin was used for bridges and culverts and levied in a second lein. In the case of No. 39 the estimated cost covers the whole proposition, including excavation leveling grades, bridges, culverts, clearing right of way, engineering and administration and contingences. So there will be no "Second" slapped on later to finish the work. Mr. Walker is engineer in charge of Judicial Ditch No. 21. The excavation is completed and the other minor contracts near completion. The lein was levied according to his estimates and when the work is finished there will be about $10,000 left in the contingency fund. A man has poor judgement who makes an estimate of costs and forgets the details which cost about 25 per cent more.

The assessment against any piece of land can be secured by addressing the County Auditor at Bemidji.

We will soon know the date of the hearing

Yours truly,
Irving E. Quist, asst. Engineer

WAR AIRPLANE NOW FLIES 140 MILES AN HOUR

French and German Speeders Go Much Faster Than American Machines.

THEY BATTLE 25,000 FEET UP

Flight Lieutenant Faulkner Gives Interesting Account of Fights Between Hostile Bird Fleets In the War Zone Along Western Front.

New York.—The swift German Fokker, less than a year ago king of the air on the western front, is now obsolete.

This was the news brought here by Flight Lieutenant Lloyd Faulkner, of the British army, recently injured in an airplane when shot down near Ypres.

In the desperate competition to build the most efficient hawk of the air, the Germans themselves have undoubtedly improved over the Fokker type, but a new allied airplane has just arrived on the front which exceeds by far anything the world has ever seen, according to the lieutenant's story.

"The new machine, the name of which may not be mentioned, makes 138 miles an hour," he said. "It is a great surprise and is only arriving on the front now.

"The most wonderful feature is its ability to climb. It can ascend straight up, without banking, and has reached 15,000 feet in seven and a half minutes.

"This makes it the ideal machine for Zeppelin work, it can get height quickly enough to catch the dirigible.

"Our new machine is the greatest fighting machine in the world and will guarantee that we maintain the supremacy in the air."

Lieutenant Faulkner received his preliminary training as an aviator in the Wright school at Dayton, Ohio. He said the machines used in the United States were way behind those possessed by the belligerent nations.

"Our battleplanes weigh two and a half tons," he said, "and are driven by two Rolls-Royce motors of 250-horse power each. They have twin propellers, and can make more than 100 miles an hour. Other big 'planes' have 300-horse power motors driving one propeller.

Smaller Machines Faster.

"The smaller machines, which carry only a pilot, are much faster. The Sopwith 'pup' makes [illegible] miles an hour; the Nieuport 'bullet' [illegible] miles; the Spad [illegible] miles, but all these are surpassed by the new wonder.

"At the front our work is divided into four classes. The first is the reconnoissance, during which we sometimes fly from 100 to 150 miles back of the German trenches. This work is done by regularly organized squadrons, in which the most important machine is the one carrying the camera. The reconnoissance unit is composed of five battleplanes and ten or twelve Nieuport scouts or Sopwith 'pups,' little fast machines, carrying only one pilot and a machine gun. The little machines are the destroyers or guards, for the big battleplanes. The big machines each carry at least two men and two guns.

"When in flying and working formation, the reconnoissance squadron is arranged in this way: The camera battleplane flies at about 5,500 feet, with a fighting battleplane on either side, flying at about 6,000. To the rear, directly behind each of the fighting battleplanes, are two more battleplanes, flying at 7,000 feet. These five machines fly 100 to 110 miles an hour. The little destroyers with their faster speed fly all about them, always ready to attack an enemy squadron.

"If the little fellows happen to be off on a bit of their own and the battleplane squadron sees enemy machines the pilots fire their alarm pistols and call the destroyers, who drive off the enemy, unless he is in much superior force, and then there is a fight.

"Flying at six or seven thousand feet, the observation machines are always being "archied," which means they are being shot at by every sort of gun, even those firing five-pound shells. Hits by antiaircraft guns are one of the natural risks and we used to bank back and forth, or zig-zag through the air, so as to throw the gunners off. That does not always work, as I found out when a shell carried away one of my ailerons and I landed in a smash that sent me to the hospital.

Fokkers Very Speedy.

"While doing this reconnoissance work it is always necessary to look out for Fokkers. You'll see five or six black spots up twenty to twenty-five thousand feet and when they get over you they'll suddenly nose-dive and drop. These Fokkers drive by at a tremendous speed, firing as they go, and then they scuttle for safety.

"The second important use for airplanes is artillery observation work. First Lieutenant Vernon Castle was doing this when I last saw him in the late fall, and had been mentioned in dispatches for his excellent work. Before going up, the pilot arranges his signals with his battery. He uses wireless.

"Observation pilots also watch every movement behind the enemy's lines. It has been arranged that if they see a large or important movement, such as the march of an army division or a large section of transport, they can give a certain signal which will call for help from every gun in that section.

"A third use to which we put our machines is night flying, which is mostly bomb work. The Germans, for some reason or other, do not fly at night. Our bombers travel in squadrons of 50 to 100. They start out in the dead of night and fly very low, not more than 300 feet up. It is practically impossible to hit them and there are few casualties among our men. This night bombing was forced on us by the fact that the Germans move their troops and stores at night.

"The last important work done at the front is the patrolling. This is done by two machines acting together and flying at five or six thousand feet. High above them, soaring and watching, at about 20,000 feet, are some of the little, fast fighting machines. These we know as 'strafers,' and it is their object to drop onto any German machine that tries to cross over our lines. This patrol work, like all the other regular flying, is done without regard to weather. Pilots have gone up in a 70-mile wind, in snow, sleet and rain.

"Phosphorous bomb raids are very popular methods with us for getting rid of the 'sausage' balloons the Germans use for observation. We used to wait for dark days for this work. Then we'd swoop down on the 'sausages,' which were usually tied at between 5,000 and 6,000 feet. As we'd drive over them we'd pull the lever and let a shower of bombs drop. If it was hit the 'sausage' would burst into flames and then you'd see a lot of Germans drop out of its observation car in their parachutes."

DISEASE OF LITTLE CALVES

Keep Youngsters Away From Cold Drafts and Protect Them in Dry Well-Bedded Place.

Pneumonia is a common disease of little calves. The cold nights that come on suddenly and unexpectedly are the chief causes.

Keep the little calves away from those cold drafts and protect them in a dry, well-bedded place during the cold wet nights. Prevention is better than cure. Only a few recover.

THE HOUSEWIFE'S PRIDE

The housewife who serves pure, home-baked bread makes the home meal a delight and a pleasure to all. She shows true motherly pride by giving to her family the most wholesome and strengthening of foods.

All foods consist substantially of fats, carbohydrates (starches and sugars,) and proteins (white of egg, gluten, lean meats etc.). These three substances sustain, operate, and repair the human body. These are the average percentages contained in seven representative staple foods, as shown by U. S. Department of Agriculture Bulletin No. 142:

	Fats	Carbohydrates	Proteins
Wheat flour	1.0	75.1	11.4
Potatoes	0.1	14.7	1.8
Beef, sirloin	16.1	- -	16.5
Butter	85.0	- -	1.0
Milk	4.0	5.0	3.3
Salt codfish	0.4	- -	16.0
Eggs	9.3	- -	13.1

Note the high percentages of proteins and carbohydrates in wheat flour. The butter spread on bread and the shortening used in making biscuits, supply the fat that makes these flour foods the balanced ration.

[illegible] ELEVEN TOWNS

H. W. SMITH Editor & Publisher

Entered at the postoffice at Goodridge, Minn., as second class mail matter.

The Eastern part of Pennington County has had its share of publicity during the past term of District Court. It has cost the county a round sum of money to settle a family quarrel, but after all it might be money well spent. In olden times such matters were settled summarily by the parties themselves, but now we fight it out in courts, and advertise our virtues to the galleries. We hope the participants will go home and let bygones be bygones, and be more circumspect in words and deeds hereafter.

The Legislature of North Dakota is having a hard time to secure the reforms which the Non-Partisan League set out to get last summer. The Old Gang dies hard and the holdover senators are doing their utmost to block any move that might be a credit to the new party. The will of more than 80 per cent of the people cuts no figure with them. It is an excellent example of the saying, "money talks". Big Business still pulls the string and its few hirelings who still remain dance lustily. We foresee the day when some of these hirelings will look back with shame on their actions.

And now comes a proposal for universal military training. Our masters are resolved to make us imitate the European nations in spite of the universal aversion to such a system in America. Thousands upon thousands left their native land on the other side and came to America, in order to get away from the hated military training. To establish the same practice here will be to them, like a slap in the face. As usual the burden will fall most heavily upon the poor. A father of small means with two or three sons between the ages of 19 and 26 will find it almost impossible to let them spend six months of the year learning to kill in an approved way. How would you farmers like to have your sons called out for military practice in harvest and threshing time? Here is where another letter of protest to your Representatives and Senators may be of benefit. We hope that the people will wake up and not allow this thing to be put over on them.

W. J. Bryan on Preparedness

Go back to the time when they commenced to pass laws against the carrying of concealed weapons and you can get all the material you want for a speech on preparedness, because the arguments made in favor of carrying revolvers can be put into the speeches made today in favor of preparedness, without changing a word. Did you ever hear of a man who wanted to carry a revolver to be agressive? No, it was just to protect his rights and defend his honor, but they found by experience that a man who carried a revolver generally carried with it a disposition to use it on slight provocation and a disposition to provoke its use by others. For the promotion of peace, every state in this union has abolished preparedness on the part of individuals because it did not preserve peace. It provoked trouble, and unless we can convince ourselves there is a moral philosophy applicable to nations that are just the opposite of the moral philosophy applied to individuals, we must conclude that, as the pistol toting man is a menace to the peace of a community, so the pistol toting nation is a menace to the peace of the world.

More Sociable.

"Has the scientific study made much difference in your boy, Josh?"

"Not as much as you might think," replied Farmer Corntossel. "Out in the garden he calls everything by its botanical name. But when he's sittin' up to the table passin' his plate he's careful to use the kind of words we all understand."—Washington Star.

His Only Friend.

Wife—You can see now how much your friends care for you. During your long illness only one has called to see you.

Husband—And that was Brown, wasn't it?

Wife—Yes. He came every day, and he said he was very sorry you were too ill to see him. He is the only real friend you've got.

"Yes, I suppose so. The day before I was taken ill I promised to lend him $10."

An Abrupt Ending.

Winston Spencer Churchill, formerly British first lord of the admiralty, made a little talk at a dinner of literary men some years ago, when he was known to fame as only a young author. He began by saying, "I, like Moses, am the author of five books, but I will not pursue the parallel further."

Mortgage Foreclosure Sale.

Default having been made in the payment of the sum of Eleven Hundred One and 67 | 100 ($1101.67) Dollars, which is claimed to be due and is due at the date of this notice upon a certain Mortgage, duly executed and delivered by Peder H. Thoreson and Anna K. Thoreson, his wife, Mortgagors, to Goodridge State Bank, a corporation, Mortgagee, bearing date the 2nd day of December 1914, and with a power of sale therein contained, duly recorded in the office of the Register of Deeds in and for the County of Pennington and State of Minnesota, on the 2nd day of January 1915, at 3:30 o'clock P. M., in Book 7 of Mortgages, on page 561; and no action or proceeding having been instituted, at law or otherwise, to recover the debt secured by said Mortgage or any part thereof;

NOW, THEREFORE, NOTICE IS HEREBY GIVEN, That by virtue of the power of sale contained in siad Mortgage, and pursuant to the statute in such case made and provided, the said Mortgage will be foreclosed by a sale of the premises described in and conveyed by said Mortgage, viz:

The Southwest quarter (SW¼) of Section twenty-three (23), in Township one hundred fifty-three (153) North, of Range forty (40) West of the Fifth Principal Meridian, in Pennington County and State of Minnesota, with the hereditaments and appurtenances; which sale will be made by the Sheriff of said Pennington County at the front door of the Court House, in the city of Thief River Falls in said County and State, on the 3rd day of March 1917, at 10 o'clock A. M., of that day, at public vendue, to the highest bidder for cash to pay said debt of Eleven Hundred, One and 67 | 100 Dollars, and interest, and the taxes, if any on said premises, and Fifty Dollars, Attorney's fees, as stipulated in and by said Mortgage in case of foreclosure, and the disbursements allowed by law; subject to redemption at any time within one year from the day of sale, as provided by law.

Dated January 6th A. D. 1917.

Goodridge State Bank,
Mortgagee.

Hans O. Kjömme,
Attorney for Mortgagee.

They Have City Managers.

Twenty-two American cities are now under the commission manager plan. They are Niagara Falls, N. Y.; Sumter, S. C.; Hickory, N. C.; Morgantown, N. C.; Ashtabula, O.; Sandusky, O.; Dayton, O.; Springfield, O.; Phoenix, Ariz.; Big Rapids, Mich.; La Grande, Ore.; Taylor, Tex.; Denton, Tex.; Amarillo, Tex.; Manistee, Mich.; Jackson, Mich.; Abilene, Kan.; Collinsville, Okla.; Montrose, Colo.; Morris, Minn.; Lakeland, Fla., and Alhambra, Cal.

Perfect Garden.

The perfect garden, from the plant and flower point of view is one where flowers may be picked each and every day of the year, yet where no spot of bare soil is ever seen. Keep reserve stock of annuals and perennials on hand so that when an annual has spent its strength or a plant dies its space may be filled with a young annual or a perennial.

Big Span Collapses; Many Lives Are Lost

(Daily Press Dispatch, Sept. 12, 1916)

Quebec—The second attempt to bridge the St. Lawrence river here resulted in another failure when the massive center span, weighing over 5,000 tons suddenly collapsed and fell into the river yesterday causing a loss of 27 lives. The span was being raised from pontoons and was about 15 feet above the water when, from some unknown cause, it collapsed and sank into the river, which is 200 feet deep at this place. About 90 men were caught on the span when it began to sway and all of them went down into the water with the structure. The bridge is the largest in the world, its contemplated length from shore to shore being 3,239 feet, with a distance of 1,800 feet between anchor buttresess. The central span is 640 feet long. The first collapse occured Aug. 29, 1907 when 60 engineers and workmen perished in the disaster.

This paragraph might well have been written about the main incident in the new serial we have secured and the first installment of which will appear in an early issue of this paper. The story is

Metchnikoff's Dramatic Death.

Professor Metchnikoff, says the World's Work, came to his laboratory on July 13, 1916. He did not attempt to hide his uneasiness at the weakness of his heart. He surprised his students, however, by saying as he put on his things to go home: "Tomorrow is the 14th, isn't it? So we won't work. I am afraid that this will be my last day here. I cannot last two days. I shall die tomorrow."

He died, in fact, on the 15th, and his pathetic farewell made a deep impression even on the pathology students.

IF your Father's good reputation were weighed in the balance against your love for a girl—

A Big, Gripping Story

Neal of the Navy

By

WILLIAM HAMILTON OSBORNE

Author of "Red Mouse," "Running Fight," "Catspaw," "Blue Buckle," etc.

Novelized from the Photo Play of the Same Name Produced by the Pathe Exchange, Inc.

(Copyright, 1915, by William Hamilton Osborne)

SYNOPSIS.

On the day of the eruption of Mount Pelee Capt. John Hardin of the steamer Princess rescues five-year-old Annette Ilington from an open boat, but is forced to leave behind her father and his companions. Ilington is assaulted by Hernandez and Ponto in a vain attempt to get papers, which Ilington has managed to send aboard the Princess with his daughter, papers proving his title to and telling the whereabouts of the lost island of Cinnabar. Ilington's injury causes his mind to become a blank. Thirteen years elapse. Hernandez, now an opium smuggler, with Ponto, Inez, a female accomplice, and the mindless brute that once was Ilington, come to Seaport, where the widow of Captain Hardin is living with her son Neal and Annette Ilington, and plot to steal the papers left to Annette by her father. Neal tries for admission to the Naval academy, but through the treachery of Joey Welcher is defeated by Joey and disgraced. Neal enlists in the navy. Inez sets a trap for Joey and the conspirators get him in their power. In a struggle for possession of the map Hernandez, Annette and Neal each secure a portion. Annette sails on the Coronado in search of her father. In Martinique Annette and Neal are captured, but are rescued by a sponge diver. Inez forges identification papers for herself as Annette. In an insurrection Neal and Annette are again captured, carried to the Sun City and Annette is offered as a sacrifice to the sun god. They are rescued by marines from the Albany. Landed in Tortuga. Annette and Neal are captured and exposed to yellow fever infection by Hernandez, but are rescued by sailors from the Albany. Inez tries to rob Annette and escapes. On her way to Chantillo Annette is captured. Neal is promoted and leads a party of transferred men toward Chantillo, but is caught in a train wreck on the way. Hernandez and Inez present the false identification papers to Brother Anselmo at Santa Maria mission. Ponto is caught and killed in his own trap, set for Annette. Annette proves title and turns over Lost Island to the government. Welcher dies in a remorseful effort to save her from Hernandez. Annette and Neal, on their way to Lost Island, are wrecked on a cannibal island by Hernandez' trickery. The Brute is accepted by the cannibals as their god. Hernandez shows his power over the Brute and is accepted by the cannibals. Annette is captured but rescued by Neal and party from the Missouri. Hernandez and Inez escape in an open boat.

FOURTEENTH INSTALLMENT

"THE GREAT GOAL"

CHAPTER LIX.

Who Am I?

In the sick bay of the battleship Missouri an anxious little group—uniformed and otherwise—grouped themselves around the form of an unconscious man. He lay upon a cot. His head was swathed in bandages. The surgeon, seated on a camp stool by his side, raised his head and glanced at those about him.

"The vitality of this man is little less than marvelous," he said.

Annette Ilington started forward. "Then he will live?" she said.

The surgeon nodded.

The little group bent forward. And with good reason. The figure on the couch stirred slightly—the huge form quivered. At last the unconscious man became no longer so. He opened wide his eyes. He stared wildly about the cabin, struggling the while to rise.

"You'll never know from me where Lost Isle is," he muttered. "Look at Pelee—death—destruction. Pray God, the Princess—"

He lifted his head. The surgeon seized him by one arm and a uniformed attendant by another. But he tossed them from him as though by the turn of a wrist and struggled to a sitting posture.

"You will," he snarled, clutching at the two men. "It's just as well I found you out, Hernandez—you and your henchman, Ponto; just as well before— Come on, both of you together."

In another instant he would have been upon his feet. But his eyes fell upon Annette Ilington.

"Anne," he cried. He stretched forth a hand as though to touch her, then suddenly withdrew it. He shrugged his shoulders. "What's the use?" he muttered to himself, "I'm dreaming—dreaming."

"Dreaming," said the surgeon somberly, "for thirteen years."

Neal gripped his mother's arm. "Look at his eyes," he whispered, "his eyes. Something has happened to him. He has become a man."

The brute man glanced inquiringly at the surgeon. "What is the matter with me, doctor?" he exclaimed, his voice strong, his tones resonant with reason. "Did my friend—the Portuguese—Hernandez—get me after all? I know I struggled with him; that's the last thing I remember. The Mexican must have black-jacked me from behind."

The surgeon smiled. "He black-jacked you from behind, all right," he said.

"Where's Manuella?" went on the figure on the cot. "And where is the little girl?"

The surgeon nodded to Neal. "He's a man all right," he whispered. "The soul has come back into the body after many years."

"The little girl," went on the brute man. His glance shifted and again he sought Annette. "Anne," he cried again. Once more his glance became doubtful.

"Excuse me, nurse," he went on, nodding to Annette, "I thought you were my wife come back to life. May I ask your name?"

"I am not a nurse," said Annette. "My name is Annette Ilington."

The man started.

He dropped his head upon his chest; then he clutched something with his hand. It was his beard—the growth of many years. He held it out before him.

"What's this," he said, "another joke?"

"Pull it and see," suggested the surgeon.

The man gave the beard a mighty tug.

"Ouch," again he cried. "It's glued."

The surgeon, somewhat uncertain of his ground—fearful of results—touched the man upon the arm.

"It is not glued," he said, smiling and watching fearfully for the slightest change of expression. "It grew—it has been growing for over thirteen years. You're a Rip Van Winkle—you have come back to life."

He paused and waited while that fact sank home. Then in a businesslike manner he drew forth a memorandum book and without further glancing at his patient held his fountain pen poised in air.

"Your name, sir—and address," he said.

The matter-of-fact tone roused the patient from a dangerous reverie.

"Me," he exclaimed. "Who am I? I am Ilington—Ilington of Martinique."

* * * * * * *

A few days later Ilington, clean shaven, sat upon the deck of the Missouri. He was a handsome man—as handsome as he had been some thirteen years before—save that time had carved deep lines upon his face. His forehead still was bandaged.

Annette crouched at his side and she held between her hands the hand of Ilington—the hand that had been so often raised to strike her down. Neal strode to the little group and saluted.

"Off duty for the present," he explained. "How is the head?"

Ilington grunted. "Sore as the dickens outside," he returned, "but working right inside—at least so far as I can tell." He glanced quizzically at Neal. "Ensign," he said, "I can't get information out of anybody. They think I've got to grow up like a child; but today I am feeling fit—I am all here and I want to know. Tell me something."

"I'll tell you everything," said Neal. "The surgeon quite agrees with you. He has discharged you cured."

And then they told him—and it took hours in the telling. They told him the truth, the whole truth and nothing but the truth.

"Let me get hold of that Portuguese, just once," he muttered, "and I'll tear him with my bare hands, limb from limb."

CHAPTER LX.

Quicksilver.

Out of the sea at sunset, bearing in his arms a burden, staggering up upon the shore of the Lost Isle of Cinnabar—there strode a man. Behind him silhouetted against the horizon, was a small sailboat, deserted and stranded on a sandbar.

The man was the Portuguese adventurer, Hernandez. The burden in his arms was a woman, and the woman was Inez Castro, his companion.

He dropped her gently to the ground, and she lay there for an instant, well spent, half exhausted. Then she, too, staggered to her feet.

"This," cried Hernandez. "is Lost island. We are in possession—and possession is nine points of the law. The god of chance has favored us so far, little one, and so long as the god of chance joins with Hernandez, Hernandez wins."

They traveled inland. The sun had set, the moon was full. For many minutes they had traveled through a clearing. and suddenly before them, rough, ragged and forbidding in the moonlight, there loomed a ruined structure built of stone.

"It's the fort," whispered Hernandez, "the Morro castle of the Ilington map."

In the far distance there was a red glow against the sky and the dull, faint clang of metal against metal.

"We are not alone," whispered Hernandez. "Someone works the mines. So much the better. We shall have allies. Let us seek them now."

Inez sank down at his feet. "Leave me alone—here," she whispered. "You can find me easily. I can go no farther and I am afraid—afraid."

Already Hernandez had bounded across the clearing, turned a corner of the crumbling ruin and was on his way. Within the next few moments he was standing on the edge of what seemed to be a crater of a volcano—a huge pit that seemed to belch forth fire.

But it was not a volcano and it did not belch forth fire. It was a cinnabar mine—or a series of cinnabar mines—pits cut into the surface of the earth and illumined by brush fires.

Hernandez crouched upon the edge of this huge man-made crater and watched the scene with interest. In each pit half a dozen men or more worked away like ants, their shadows flung against the walls in fantastic shape.

Hernandez drew a deep breath of satisfaction.

"This is the life," he said to himself. "These men are my men or my name is not Hernandez."

He drew forth a brace of pistols and examined them carefully in the moonlight. Satisfied that they were in working order, he rose and skirted the edge of the crater, creeping stealthily around behind the furnace. Then, with remarkable agility, he hurled himself as from the skies into a circle of bright light, lifted up his voice and called aloud.

In an instant he was surrounded by a motley crew of men—men strange, weird—men whose faces were overgrown with a rank, untrimmed crop of hair and beard. They hailed his advent with delight.

Out of this multitude a huge individual pushed his way through to Hernandez and placed a grimy hand upon the latter's shoulder.

"Whence come you?" he queried in Spanish.

Hernandez answered him. "I was set adrift in a small boat," he returned, "and I came ashore here not knowing where I was. Who, sir, are you, my countryman?"

"Twelve years ago," said the pirate chief, "we were wrecked—ground to pieces on this shore. And we found what? Enough to eat? Yes. A place to sleep—a place to live. But this is a God forsaken island, senor. Only the mines have kept us from going mad. We have worked for wealth madly—hoping against hope."

"What do you mine?" asked Hernandez.

"Cinnabar," returned the chief.

Hernandez raised his eyebrows. "Quicksilver," he said. "It should make you rich."

The chief held up his arms. "Rich," he cried. "Senor, follow me."

He called for a torch and nodding to Hernandez led the way to the edge of a nearby pit and down a ladder. At the foot of the ladder he crawled into an opening and bade Hernandez follow. The opening was a cave—a cave whose floor was covered with huge earthen jars.

"Quicksilver, senor," hissed the pirate chief—"millions of pesetas worth—possibly a billion—who knows."

"Did you come alone, senor," he asked. "Is there any woman with you?"

Hernandez shook his head, but a terrific fear clutched his soul.

"No woman," he returned. "I am alone."

The chief fell back, disappointed; then he raised his voice to its normal tones again. "All this, senor," he exclaimed, appealing to his companions, "a king's treasure. We have carted it for twelve long years. We would give it all for women." He thrust his face into Hernandez'. "I, senor, would give it all for one."

CHAPTER LXI.

Cutthroats.

As the keel of the Missouri's launch grated against the sand. Annette sprang out and waded gleefully ashore. Neal was a close second.

"He Has a Right to Know," She Said.

Two sailors carried Mrs. Hardin through the shallow water. A lieutenant leaped out with Ilington, and bounded to dry land.

It was two hours later that Annette, pursuing a hairless little tropical animal along the beach, rounded a corner, and espied a sail.

Her heart leaped into her throat. Upon her person she carried a sure fire automatic; she examined it and found it in excellent condition. Then she turned her glance once more upon the sail.

And then Annette's heart stood still again. For within the boat there was a human figure. Annette shrank behind a rock and watched. And suddenly she knew—

The figure was Inez. She was alone, and seemed to be making frantic efforts to sail the boat. Annette watched her with interest. And while she watched a stiff breeze sprang up and nearly swamped the boat.

"Inez—Inez," she cried, "do as I say—Inez—"

Inez heard her, and immediately forsook the tiller and the rope and held out her hands beseechingly over the gunwale of the boat. It was the best course she could have pursued. The little boat, left to itself, swung about and plunged full tilt toward the shore.

As it struck Annette was there to meet it. She dashed into the surf and dragged Inez in safely to dry land. Inez was frantic with fear.

"Where," asked Annette, "is the Portuguese, Hernandez?"

Inez waved her hand wildly inshore. "Somewhere—in—there—with—the beasts," she cried. "Don't ask me. I don't know. I—I ran away from him."

"The beasts?" faltered Annette.

"Worse than that," returned Inez, "you're a woman. I'm a woman. I've been hiding from them—even from him—for three days. He—he doesn't know where I am—he hasn't found me. Oh!"

She sank upon the sand—her form shook with agitation.

Annette, wondering, knelt by her side. "Why have you run from him?" she queried.

"I—I can't blame him," cried Inez, suddenly facing Annette. "He's mad—crazy for wealth, Hernandez. So am I. And wealth is here—you don't know— He told me all about it—before I began to suspect—"

"Suspect—what?" asked Annette.

"Ah," went on Inez, checking her agitation, for the presence of Annette gave her courage, "you should see—he told me—there are millions of dollars worth of quicksilver—all ready for the market—stored away. Millions of dollars' worth. And the mines—they're not half worked. And these beasts are working them—"

"Beasts?" said Annette again.

"Cutthroats—men—all of them, men," groaned Inez, "and they've been here years and years—and they've been alone. They're wild-eyed enough to kill each other. And they offered Hernandez all the quicksilver that they've got if he'll find some way to bring them women. Ah, for hour after hour he harped on that—to me. Hour after hour he repeated it—talked about it in his sleep. And finally I understood—"

"You're safe," said Annette, "at least so far as Hernandez and these—beasts are concerned. There's a battleship riding in the bay around the bend. Nothing can harm you now"

Inez gasped with relief. "Nothing can—" she began. Then she uttered a wild yell. "Ugh—arg-g-gh—look."

Annette looked—almost too late. Out of the brush behind them bounded two frightful figures—half-clad—with matted hair and beard. With hoarse cries they darted toward the women. Inez turned frantically and fled up the beach One of the cutthroats darted after her. Annette swiftly drew her pistol, aimed and fired. The pursuer of Inez dropped in his tracks. But in another instant Annette was seized in a pair of strong arms and tossed over the shoulders of a giant and carried swiftly inland.

Suddenly their path was blocked. A figure shot out before them and stood with folded arms. This figure was Hernandez—and Annette almost hailed him as a friend

"So," said Hernandez, "I have kept my promise. The woman is yours—the treasure is mine. It is a bargain." Then he uttered a sudden exclamation. "It is not Inez," he cried, "it is you—you little wildcat of an Ilington. So you have arrived. It is better so—better so."

"It is barter, eh?" he queried, "you the woman. I the jars of quicksilver."

The chief regarded him fiercely. "You lie in your throat, stranger," he exclaimed in guttural tones. "I captured the woman—you kept her from me. I took her by force—and I have waited long." He laughed loud—a derisive laugh. "I took her by force. I have her. Yes, and you have our treasure—after you, too, have waited long—after you have taken it by force, Ho, ho."

Hernandez understood.

He sprang at the pirate chief, striking at him frantically, and clutching at Annette, trying to tear her from him.

In a moment a multitude of beasts swarmed through the underbrush—entered the arena of events.

CHAPTER LXII.

Onslaught.

On the chief's part it was a horrible mistake. In his momentary excitement he had thought to exterminate Hernandez. But the cutthroats who bounded into view never even saw Hernandez. Hernandez was there, agile, alert, ready to defend himself. But they didn't know it.

Caught Her in His Arms.

The only thing they saw was Annette Ilington, clutched in the mighty grasp of their chief. Like a mob of ravenous wolves they pounced upon her. The chief beat them off.

"There are two," he exclaimed, "two. The other runs free upon the beach. This one is mine. The other on the beach. Scatter and find her."

Some half dozen of the crew, accustomed to obedience, scampered off. But not so the rest. Shoulder to shoulder, thigh to thigh, they struggled on after their chief holding out their hands toward the trembling girl upon his shoulder. Step by step he fought his way, clutching her firmly to him, until he reached the entrance to a cave—his cave. He stooped to enter.

Then broke the storm.

Down on shore Neal and Ilington, alarmed at the prolonged absence of Annette, had scattered—Neal scoured the beach in one direction—Ilington in another.

At last Neal found her—Inez, crouching behind a rock. Inez, panting with fear, leaped into his arms. He cast her off—for he did not understand.

"Annette," she cried, "they've got her—there—that way—that way."

Annette, numb with fear, lay quivering just within the mouth of the cave. Behind her was the dark—the unknown. She was too terror-stricken to move. But she was quick-witted and she saw—and understood—that this terrific fight was helping her. She collected herself—she began to plan. Inch by inch she crept farther into the darkness.

When the fight was at its hottest the chief lunged far out in the midst of it and left the cave's mouth temporarily uncovered. Like a flash Annette wriggled out of the cave and slunk swiftly toward the undergrowth. She reached it, when a figure blocked her path.

It was Neal. With a wild cry she flung herself into his arms. But Neal repulsed her for the instant, and with forethought. Almost brutally he flung her behind him, and unshipped his navy gun. For action was at hand. One man and only one had seen Annette crawl from the cave's mouth and that man was the pirate chief. As soon as he could disentangle himself, he was away and after her. And here he came, tearing through the undergrowth with savage bounds.

Neal fired thrice—hit once—missed twice—and then the cutthroat was upon him.

Ilington from the shore, heard the shots. He looked upward and saw, peering down at him from at eminence, the face of his arch enemy, Hernandez.

He shook a massive fist at the face, and the face disappeared.

Ilington hastened back to the temporary camp and found that the lieutenant and his men were making ready for a run.

"Come on, foot," cried Ilington, leaping into the undergrowth, "I'm ready for a fight. I saw a head just now, and I'm going to hit it hard."

Neal fought with fury, but his fight was futile. So, be it said, was the fight of the pirate chief. For Neal's shots had brought the other beasts swarming like human hornets about their heads. Annette's temporary escape had been discovered—they had been cheated—vengeance was their due. They pounced upon Neal and their chief like harpies—once more pandemonium reigned. Annette crouched unseen—horror-stricken.

Suddenly she shrieked aloud—for Neal had disappeared beneath a mass of men—.

She shrieked and ran like wild for the shore—for succor. There was no fight in her—she was beaten by fear. That shriek was fortunate for Neal. His assailants left him and darted after her—scurrying like wild dogs through the brush.

And then—crack—crack—crack—. The bark of a dozen navy rifles. A dozen men plunged headlong.

It was a bad fight—a desperate fight. Neal's men were outnumbered.

Meantime a solitary figure slunk through the brush and crept past all the fighters. This was Hernandez. Ilington, during a lull, saw him pass, but knew not where he went. Hernandez knew. He was still hoping against hope—he still lusted blindly after treasure. He reached the edge of the artificial crater and crept down a ladder and plunged into the treasure cave. He plunged his hands—his arms, into the living quicksilver—he tossed it into the air.

"They've never beaten me yet," he cried, "this is mine—all mine."

He started suddenly. Across the pit there was a lull. And then the deadly crack—crack—crack of rifles.

"Re-enforcements," he muttered.

He was right. One boatload of marines had reached the shore in another launch, had plunged through the thicket and had reached the conflict just in the nick of time.

CHAPTER LXIII.

The Edge of the World.

Hernandez crouched behind one of the huge earthen jars. The light that streamed in at the cave's mouth darkened suddenly, and a huge figure crept in. At first Hernandez thought this was the pirate chief—but that fierce fighter was lying far across the pit with a bullet through his head. The figure crept on farther—then Hernandez saw.

It was Ilington. Ilington was unarmed—his face was blood covered. He was a figure fearful to behold. Hernandez climbed the ladder in fearful haste. Ilington saw him and followed, caught him, tore from him Hernandez' ever ready knife, and faced him squarely.

"I swore to tear you apart with my hands," cried Ilington beside himself with rage, "and I'm going to do it."

"Two can play at that," panted Hernandez, "come on."

Ilington came on—reckless of the fact that he was fighting on the edge of a precipice.

Far to the rear Annette plucked Neal's wrist.

"Look—look," she cried, "Hernandez and my father—and the Portuguese has a knife."

She was not the only watcher. Below on shore a fresh boatload of marines were landing. They had seen the fight—they watched it now. Their officer peered through his glasses.

"Our friend, the Portuguese," he said, "we've got to get him and take him back. The world needs one Hernandez less."

Even as he spoke, Hernandez struck with his knife and ripped open Ilington's arm.

With a wild cry the fresh marines scrambled up the cliff. Hernandez, cool with coolness of desperation, sidestepped, and lifting one foot, neatly tripped his man.

Ilington fell heavily, with one arm hanging over the precipice.

And then Hernandez looked—for the first time he took note of his surroundings.

Behind him ranged Neal and his squad, with fixed bayonets and with death shining in their eyes. Below, scrambling up the cliff were twenty men, dangerous—desperate.

Hernandez paused—his eyes narrowed. He was beaten and he knew it.

Hernandez rose to his full height. "Sorry gentlemen," he said, "but you've never beat me yet and you cannot beat me now."

He retreated a pace or two, gave a sudden run—and leaped far out over the edge of the precipice.

Neal formed his men in line—they were joined by the squad that climbed the cliff.

"Forward, march," said Neal. Annette and her father followed them. Inside of fifteen minutes the little squad were scurrying about the inside of the cave. They were plunging their hands into the liquid metal and letting it run through their fingers.

"Some little island, this," they commented.

"It took you boys to get it for us," returned Ilington, "without you, Lost Island would have been lost forever, and so would we."

He turned to Annette, "Annette," he said, "this is yours—all yours. You are a princess—this is your kingdom." He stretched wide his arms to include all Lost Island. "Your kingdom," he repeated.

Annette looked at Neal. Neal loked at Annette—then he rushed forward and caught her in his arms.

Annette glanced at the boys in blue. "And this—my king," she said.

Dr. Newell, has been in town the past couple days, packing up his drug stock which he will remove to Thief River Falls. We hate to see the drug go, but the lack of business is the doctors reason of quitting. We are of the opinion that a drug store would pay here if it was attended to right. For one can't expect a business to pay when he only gives half his time to it, the same as the doctor has been doing with his drug store.

August Anderson, was a business visitor in Mavie, Tuesday.

Herb. C. Johnson of Strandquist was a Goodridge business visitor Wednesday.

The 12th installment of Neal of the Navy, Hearst-Pathe news No. 8, and Worlds Wonderland will be shown at the Grand Theatre Saturday night. Don't Miss Them.

Dr. Froelich of Thief River Falls, was called up here Monday morning to the Sever Anderson home where one of the boys was quite sick. He was called to the Professor Halvorson home, where his little boy was sick and what turned out to be a mild case of Scarlet Fever.

The Goodridge Literary Society, met last Thursday evening at the school house. A very interesting program was rendered, after which a neck tie social was given. A large number of neck ties were sold, which brought the neat little sum of $20 20, which will go towards the piano fund for the local school. G. C. Gulrud was the auctioneer, after the sale was over, games of various kinds were indulged in, and every one enjoytd themselves immensely.

John Kast, of Germantown, was a Goodridge visitor Monday. He tells us that from a flock of 35 Rhode Island Red chickens, during the month of January, he received 400 eggs That is a pretty good record for this time of the year. Anyone who does not beleive chickens pay, had better talk to John.

R. R Johnson, left Saturday for St. Paul with a car load of stock.

Solo—Cupids Queries—Harry McDonald
Recitation-Little Jack-Joseph Christianson
Reading — Teresa Olson
Vocal Duet—Mrs. C. H. Christianson, Mrs. M. O. Seavey.

Speaks on Drainage Question.

Thief River Falls, Minn. Special to Eleven Towns.

Sen. D. P. O'Neill of this city Saturday afternoon spoke to a large gathering of business men of the city and of settlers east of Thief River Falls and who are deeply interested in the proposed widening, deepening and straightening of the Red Lake River between here and the Red Lakes; the speaker also told of a bill which he is going to introduce in the interests of those who have ditch taxes maturing this year and who on account of losing their crops from inundation are unable to pay these taxes, the bill providing for an extension of five years, the county to bear the cost of carrying the bonds therefor.

The bill which the senator has introduced into the senate providing for the river improvement was explained in detail and it was pointed out that the state is not to bear more than 50 per cent of the total cost. The Red Lake Indians, it is understood, wish their land drained and are willing to stand their share of the cost of the river improvement which is first necessary before any ditching of the reservation will be productive. Thus a large part of the intended improvement will be borne by the Indians. Lands benefitted will also bear their share of the expence but as there is a limit of $5 per acre to which lands can be assessed for drainage the cost to such benefitted lands will not be large.

The bill to aid property owners whose ditch taxes come due this year and who will be unable to meet them is appending and is a measure that will bring relike to many if adbpted by the county board after passing the legislature.

A motion to send five or more delegates to a special meeting of the state legislature committee having such matters in charge was made, seconded and carried, two of the committee to be members of the county board of Pennington county and the other three to be farmers living on lands effected by floods such as have prevailed. They will probably leave the latter part of next week, the time of the meeting having not been definitely decided upon as yet. Secy. Laird of the Commercial Club will be first advised and he in turn will notify the committee.

A BILL FOR AN ACT TO AUTHORIZE COUNTY BOARDS IN ANY COUNTY OF THIS STATE HAVING A VALUATION OF NOT LESS THAN FOUR MILLION NOR MORE THAN SIX MILLION DOLLARS, AND HAVING AN AREA CONTAINING NOT LESS THAN FOUR HUNDRED THOUSAND NOR MORE THAN FIVE HUNDRED THOUSAND ACRES OF LAND TO EXTEND THE TIME OF PAYMENT OF DITCH ASSESSMENTS UPON PROPERTY SITUATED THEREIN AND PROVIDING FOR THE EXTENSION OR REFUNDING OF BONDS ISSUED THEREFOR.

Be It Enacted by the Legislature of the State of Minnesota:

Section 1. The County Board of any county in this state having a valuation of not less than four nor more than six million dollars and having an area containing not less than 400,000 nor more than 500,000 acres of land, may by resolution made upon the filing with the county auditor on or before May 1, 1917, of a petition from not less than one fourth of the persons, firms or corporations assessed for benefits on account of the construction of any one county drainage ditch, postpone, for a period not to exceed five years from the date of such resolution, the payment of any or all of such assessments for benefits becoming due or payable on or before June 1, 1921, including any such assessments and interest becoming due or payable on June 1, 1916.

Section 3. Upon such extension being allowed and granted under the provisions of this act, the county Board shall so contract with the holders of the bonds issued by such county to cover the expenses incurred in such ditch proceedings had, so that their security shall be safeguarded and the obligation of their contracts remain unimpared. If such county Board deems it expedient to refund such bonds by a new bond issue, they are hereby authorized and empowered to do so.

Esplee News.

Well it has been snowing this week and the cold weather has set in again.

John Halvorson from Callaway, Minn. is up visiting with Herman Svenpladsen's family now.

Oscar Olson went home from Shores last Saturday with the run away news.

Ole Nelson will leave for McIntosh Monday.

Mr. and Mrs. Ole Tharaldson were doing some shopping in Erie Saturday.

Miss Dena Wold and Miss Thelma Hovet were callers at Mrs. Knute Roysland Sunday.

Ole O. Omlid called on Ammound Bjorgufson, Sunday.

Ole Tharaldson is busy hauling hay from the Halvor Syverson farm.

Mrs. Theodore Jacobson is feeling very sick but we all hope that she will recover.

Burglars! Mercy.

(BY SUB URBAN)

Some one got away with about twenty pounds of choice cut pork and some sausage from the cooking department of school district No. 1. (Star twp), last week when the occupants were on a week-end visit home near Kratka. Rumors are to the effect that one or the other or both of the nearby located "Bachelor Profs" are the culprits, but flimsy circumstantial evidence is all that has been proved against them so far and a "conviction" on the "facts" is yet a matter of conjecture. But a warning is hereby given to such "enterprising" parties to "look out" for dead-falls after this.

Respectfully submitted.
H. C. Iverson.

Annual Stock Breeders Meeting.

On Saturday, March 3rd, the Pennington County Live Stock Breeders Association holds its annual meeting at the Auditorium in Thief River Falls at 11 o'clock. At the same time and place the Guernsey, Holstein and Shorthorn societies will also hold separate meetings. An attempt will be made to organize for the block system of purchasing sires. The speakers include Professors McKerrow and Gay of the College of Agriculture, both of whom are considered live stock leaders in the Northwest. Prof. Hoverstad, alfalfa expert Haney of North Dakota and local people will also do their part to make the event a success It is expected that this meeting will surpass any of the stock gatherings ever held in the county. No farmer interested in live stock can afford to be absent--there is something of value for all.

Henry Werner,
Sec'y Pennnington County
Live Stock Breeders' Association.

First Annual Poultry Show.

Poultry raisers of Pennington County are notified that on Friday, March 2nd, at the auditorium in Thief River Falls the first annual poultry show will take place and a county poultry association will be organized. Prizes of $3.00, $2.00 and $1.00 will be given winners for pens of standard varieties of chickens. A pen must consist of one rooster and two hens or one cockeral and two pullets. Any form of crate will serve for the first show. Prof. C. E. Brown, the poultry man of the Crookston School of Agriculture, will judge the birds. Prof. Chapman of the College of Agriculture,, St. Anthony Park, one of the greatest poultry experts in the country, will aid Prof Brown on the platform. These men of themselves are worth going a long way to hear.

Poultry raising is becoming an important industry in this section, six carloads of poultry having been shipped out of this city during 1916. The state also appropriates $400 annually to each county association which is properly organized. Poultry lovers are therefor urged to attend the first Pennington County Poultry Show and help organize for the future.

Thief River Falls High School

Easy to Please.

"So." said his girl's papa furiously. "you think you could make my little girl Arethusa happy?"

The young man considered his prospective pa-in-law, who had gout and a face like a fire engine and an eighty horsepower temper.

"She's been happy with you, sir, hasn't she?" the young man asked.

"I think so, my boy—I think so," replied his girl's papa. "I certainly think so. I think so certainly. I'm certain I think so."

"Well," chimed in the young man sweetly, "if she's been happy with you I certainly think I can make her happy." I think so. I think so certainly. I'm certain I think so."

The Fleur-de-lis.

The fleur-de-lis, the well known emblem of France, is said to have been brought from heaven by an angel to King Clovis, he having made a vow that if he proved victorious in an impending battle with the Alemanni near Cologne he would embrace Christianity. It was the national emblem until the revolution of 1789, when the tricolor (white, red and blue) was adopted. The royalists later tried to restore the old emblem to the flag, but without success.—New York American

Leading Up to It.

Some Scotch yokels were enjoying the fun of the fair. Seeing an old fiddler in the street, a few of them went over to him, and one, handing him twopence, asked him to play the "Battle of Stirling Brig." The old fiddler took the money and went rasping away the same as before. The yokels getting tired of this, the spokesman again went over to the fiddler and said to him, "Hi, man, that's no' the 'Battle of Stirling Brig.'" "I ken," replied the old fiddler. "That's the skirmish before the battle."

The ELEVEN TOWNS

Entered at the postoffice at Goodridge, Minn, as second class mail matter.

The opposition to Judicial Ditch No. 39 must concede weakness of their cause, otherwise they would not need to take such desperate measure. An attorney of Northern Minnesota is not ever good enough. Mr. Hannahan, unquestionably is an able attorney, but whether he knows anything about drainage laws or not, this bunch forgot to find out. We wager that there are any number of lawyers in this neck of the woods who could handle this case for most of them have had experience with the working of the drainage law before.

Brother Hunt of the Sunbeam does not agree with us in our criticism of Senator O'Niel for his support of the bill appropriating $50000.00 to hire deputy sheriffs for the lumber interests in Northern Minnesota. But we ask, what is the underlying motive of this bill after all? Is it not to throttle free speech and free assembly? Then it seems to us that brother Hunt should think differently. Was it not for this very same thing that he had to defend himself at the last term of District Court? He won out in the fight and we are mighty glad, for had it resulted otherwise, no editor would dare to call attention to acts which he deems inimical to the public good. We can imagine that his lawyer made an eloquent plea for a free press, telling of the great good the newspaper does in educating the public, and that criticism of public officials by newspapers tends to make them more careful in their actions. We are in perfect accord with such a view, and believe that the press should be unrestricted as much as possible, but at the same time, what applies to one should apply to another. If we are anxious to secure for ourselves the right of free speech and free assembly, we should be willing to give it to our fellowmen.

We cannot help but call attention to the doings of our last Grand Jury. So many people have an idea that the usefullness of the grand jury is to be estimated by the number of indictments it can bring in, that we believe it is high time this notion was corrected. Seven whole days of last term of court were spent in trying cases were no conviction was had. It cost the county something like $2,000.00 and the individuals concerned about one half that sum, and for absolutely nothing. If the grand jury had failed to bring in indictments, the county would be money ahead. More care should be exercised before dragging persons into court to answer to a criminal charge. The facts presented to the grand jury in the above cases could not have been more convincing than those presented at the trial, and certainly it was far from enough to convict. In fact, the parties themselves took it somewhat as a joke, knowing that no sufficient cause existed. Of course, if the county wants to spend money in settling family quarrels or personal spite, it may do so with the consent of the county attorney, but the people should have a voice in the matter. Our taxes are high enough at present and we would not be forced to maintain entertainment for the citizens of the county seat, which seems to be the principal value of these trials, outside of the practice it may give the attorneys interested.

In a lengthy editorial, the News-Press of Thief River Falls endeavored to convey the idea that the Non-Partisan League is a dangerous organization of which the farmers should beware. It wants you to infer that the editor has gained this knowledge from a personal visit to Bismark where the North Dakota Legislature is in session, composed largely of members elected by the above mentioned organization. But singularily enough, he fails to point out any specific thing wherein you can be harmed by joining, and gives, as his only reason, that the money spent should stay at home. Undoubtedly the editor should like to have some of it applied on an increased subscription to his own paper, which we would not object to ourselver. Still we feel, where any movement is attempted for the purpose of emancipating the farmers it should receive our hearty cooporation and support. We do not beleive it would have been necessary for the editor to go any farther than Grand Forks in order to get up an editorial of that nature The Herald over there is more that anxious to supply such stuff.

Now, you farmers, who are members of the league, do not let any editors of that nature discourage you; nor cause you to lose interest. It is but the beginning of a fight against you in this state, just as they are fighting the boys in North Dakota. Possibly the editorial was inspired by the same interest. Whenever the humble and down-trodden try to something for themselves, the big ones try to make you beleive there is great danger in the undertaking. You see, some of these fellows cannot get over the old notion that you farmers have not enough brains to run anything but your farms and pay interest, and that politics and government is a sacred thing to be let alone, so that the wise ones can do as they please. It is our sincere hope that this movement will sweep the entire country and brush all the old gang politicians into the waste basket. You have the number and the brains and if you stick together, there is no power strong enough to say to you nay.

NOTICE FOR PUBLICATION.

DEPARTMENT OF THE INTERIOR,

U. S. LAND OFFCE at CROOKSTON, MINN.

February 20th, 1917

NOTICE is hereby given that Alexander Shores, of Goodridge, Minn., who, on Feb. 24th, 1912, made Homestead Application Serial, No. 07362, for NW¼, Section 10, Township 154 N., Range 39 W., 5th Principal Meridan, has filed notice of intention to make Commutation Proof, to establish claim to the land above described, before Wilhelm Michelet, U. S. Commissioner for District of Minnesota, at Thief River Falls, Minn., on the 28th day of March, 1917.

Claimant names as witnesses:
Oleander Uglem, of Goodridge, Minn.
Andrew Speten, of Goodridge, Minn.
J. G. Turnbaugh, of Goodridge, Minn.
Oscar Olson, of Goodridge, Minn.

Proof made according to law under which entry was made.

Peter M. Ringdal,
Register.

POLES AND WIRES HURT CITY

Los Angeles Newspaper Complains of Conditions Which Work Harm in Many Other Municipalities.

The residents of Los Angeles are to be congratulated if the city shall quickly acquire the privately owned lighting systems and avoid the multiple pole-and-wire systems now borne by the northeast districts. In the latter, in Garvanza and Highland Park districts particularly, more landscape beauty has been blotted out in a few months than the residents have been able to create in several years. Poles and wires are everywhere, trees despoiled, private property rights violated, in stringing wires without permission, and all the evils usually attendant upon service by employees protected in their vandalism by civil service. It is most sincerely hoped that acquisition of existing lines by the city will result in the removal of at least two-thirds of the present jungle, for the district is now despoiled.—Los Angeles Times.

City Managing a Profession.

When the commissioners in charge of Niagara Falls, N. Y., were looking about for a manager for the city they heard of a young fellow at Cadillac, Mich., named Carr. Cadillac was paying Carr $3,500 as city manager, and it figured that it had made a good investment, for he had saved the city $7,000 out of a budget of $78,000.

Carr looked over the ground at Niagara Falls and said he would take the job at $5,000. But he agreed to save the city $25,000 by putting the city on a business basis. It looks as if he would make good.

That's what the city manager plan makes possible. It builds up a corps of trained men who know how cities ought to run. Then it permits a city to bid for the services of a man who is conspicuously successful in the business.—Kansas City Star.

Father of "Tanks."

Patriotic Scotsmen might plausibly claim that the real inventor of "tanks" was John Napier of Merchiston, who also invented logarithms. He had many varied intellectual activities besides the higher mathematics, and was a zealous protagonist of Protestantism. For confounding all "enemies of God's truth" he confided to Bacon's elder brother certain "secret inventions." These included a chariot of metal, double musket-proof, the motion of which was controlled by those within, "who discharged shot through small holes, the enemy being abased, and uncertain what defense to make against a moving mouth of metal." This looks like the original "tank," but Napier directed the detailed designs for his weird instruments of war to be kept secret until necessity compelled their use.

Right Type of Patriotism.

Every American who does not think his land the fairest that ever the sun shone on, his own state the finest in the Union, and his town the best place in which to live has not reached the same celestial plane of joy and patriotism as the foreigner, who thinks his little wind-swept bog is the happiest spot in the happiest land the good God ever made. This is the love of country that glorifies a land and the people that inhabit it. This is what makes every hill and valley, every rock and rill, the most beautiful in the world, because it is ours, made sacred and beautiful by the memories woven around it.—Exchange.

AUCTION

Having sold my farm, I will sell at public auction on the North East quarter of Section 26, in Highlanding Township; 2 miles Southwest of Erie P. O., 2 1-2 miles east of Highlanding P. O. and 6 1-2 miles south and 2 1-2 miles east of Goodridge, the following personal property, on

THUSDAY

MARCH 1st, 1917

Sale Commences At 10:00 O'clock A. M.

Live Stock

One Percheron Stallion, 10 yrs. old, weight 1800 lbs.
Five Horses, geldings, 6 to 10 years old, weight from 1200 to 1600 lbs.
One red Cow, 10 years old, fresh December 24th
One red Cow, 6 years old, fresh soon
One red Cow, 5 years old, fresh in May
One red Cow, 4 years old, fresh January 20th
One red Cow, 3 yrs. old, half Guernsey. fresh in May
Two Heifers, 2 yrs. old, half Guernsey, with calf
Four yearling Heifers, half Guernsey
One yearling Steer
One full blooded Guernsey Bull, 18 months old.

MACHINERY ETC

Two Fuller & Johnson sulkey plows
One 1 horse cultivator One 4 horse wooden drag.
One 7 foot Minnesota binder One light wagon
One 5 foot Minnesota mower Three light sleighs
One 4 horse power Detroit Gasoline Engine
One 16in Emerson Sulkey plow, with breaking attacnment One new Feed Mill One tank pump
One 30in. circular wood saw One blacksmith forge
1 DeLaval cream separator No, 12
1 100 lb. platform scale 200 Oak fence posts

About 5oo feet fine oak flooring
1ooo feet oak and tamarack plank, some pine flooring and other lumber Some dry popler wood
7o bushels spring Rye 60 bushels potatoes
Some seed flax and seed barley 1 steel culvert
About 5o bushels 1915 Marquis seed wheat
About 7o bushels 1915 Golden Yellow Seed oats
A few sacks of extra early Orlof seed oats
Some new prelude wheat, earliest wheat known
Some timothy and alsyke clover seed, mixed
Some alfalfa hay. 1 oak extention table
1 dresser 1 wash stand 1 sewing machine
1 washing machine 1 spinning wheel
Small farm tools, household goods, furniture and other articles too numerous to mention.

Free Hot Lunch At Noon

TERMS: All sums under $10.00,Cash. On sums above that amount bankable pap ers will be taken, due November 1st, 1917,

Metchnikoff's Dramatic Death.

Professor Metchnikoff, says the World's Work, came to his laboratory on July 13, 1916. He did not attempt to hide his uneasiness at the weakness of his heart. He surprised his students, however, by saying as he put on his things to go home: "Tomorrow is the 14th, isn't it? So we won't work. I am afraid that this will be my last day here. I cannot last two days. I shall die tomorrow."

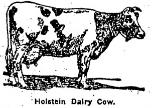
He died in fact, on the 15th, and his pathetic farewell made a deep impression on his pathology students.

SCRUB COWS AND DAUGHTERS

Iowa College Makes Interesting and Instructive Comparison—Record of Holstein Grade.

A very interesting and instructive comparison is made between the records of individual scrub cows and their own grade daughters as shown by experiments at the Iowa college.

The best monthly record of one Holstein grade shows an increase of 67 per cent in amount of milk and 33 per cent in the amount of butterfat as compared with the best monthly record of her dam, this being the best monthly record for these two cows during three lactation periods for each one. The average for the three lactation periods shows that the Holstein cross had an increased production of 101 per cent in milk and 53⅓ per cent in fat as compared with her mother, which was one of the original scrubs.



Holstein Dairy Cow.

One Guernsey cross showed an increase of 110 per cent in milk and 107 per cent in quantity of butterfat as compared to the corresponding best month of her mother; whereas her average increase, that is, her increase in total amount of milk and butter for the entire period of lactation, showed an increase of 181 per cent in milk and 136 per cent of butterfat as compared with her mother.

CHAPTER I.

Love of Woman.

If meetings only lived up to their anticipations, life would be a succession of startling climaxes. It had been some months since Meade had seen Helen Illingworth. He had dreamed of meeting her every day and had pictured the meeting differently and more rapturously after every letter. As a matter of fact the whole thing was casual and ordinary to the last degree. It always is.

Doctor Severence, a retired physician, who was vice president and financial man, and Curtiss, the chief engineer of the bridge company, were hard upon Miss Illingworth's heels as she stepped down from the car to the station platform. He saw her, as it were, surrounded by prosaic men. The woman he loved got the same welcome and the same handshake as her father and the other two men. It was not until big Abbott, who had been belated by some sudden demand of work, came sweeping down the platform to engage the attention of the men that the anxious Meade had a moment with the girl herself.

Now Helen Illingworth had also been seeing visions, so that she had been as disappointed as he. The only real satisfaction that either of them could take in the situation lay in the fact that the other was there. It was midsummer and the girl was dressed in some light, filmy fabric which well became her radiant beauty. Meade could look at a bit of structural steel work and tell you all about it. All that he could have told you about the dress she wore was that it was exquisitely appropriate, but it never occurred to him that with a great price to a great artist Helen Illingworth had obtained that look of delightful simplicity.

The gown was not wasted on Meade, she decided, as she caught his rapturous glance. She had never looked lovelier. She was not a fragile, ethereal woman; quite the reverse. That was one of ten thousand things Meade liked about her. She could do all those athletic and practical things that modern young women can do and she could do them well.

Meade was intensely practical and efficient. He could do all of those things himself and many more and he liked to do them, and that is one reason why he had been attracted to her; yet not for that alone did he love her. On that soft summer afternoon she looked as subtly delicate as every man would at one time or another have the woman he loves appear, and as far removed from things strenuous as if in another world! He was wearing the rough clothes, flannel shirt, khaki trousers, heavy shoes and leggings which were his habitual use at work. Contrasted with her filmy and delicately colored fabric his well-worn olive-drab habiliments stood forth hideously. That is, he thought so, and the contrast somehow seemed typical of the difference between them as he considered her.

There was the careless insouciance of conscious power in the bearing of the engineer which differentiated him from most of the men with whom she had been thrown in contact during her life. The International Bridge was the biggest thing of the kind the Martlet company or any other American structural plant had ever undertaken. It had been a constant topic of conversation wherever her father was. She had heard all about it, and although, strictly speaking, the bridge was the work of Meade, Sr., yet she always identified it with Meade, Jr. There was a feeling in her mind that it was her bridge and that, through him, she commanded it. She was a supremely assured and entirely confident young lady, yet with the man by her side she experienced a passing sense of uneasiness, such as one might conceive the butterfly would feel in the presence of a steam hammer.

They were as awkward and constrained when left to themselves as if one had not been all over the world on man's jobs for a decade and the other had not queened it among the nicest girls of the land for half as many years. And with thoughts burning, passionate, and words embarrassingly torrential at hand to give them utterance, they only spoke commonplaces!

"How is the bridge getting along?" asked the girl, repeating her father's words of a few minutes before, as these two fell behind the others marching down the long platform, while the maid standing by the private car with the porter looked curiously after the moving group and wondered if that gray-green, long-legged young man was the reason for the New York gown!

"It's doing splendidly," was the answer, and even with his heart full of the girl by his side whom he longed to clasp in his arms but did not even dare touch the hem of her garment, some little enthusiasm came into his voice. "It is the greatest bridge that was ever erected," he said.

"How you love it," said the girl.

Had Meade loved the bridge? Ah, there could be no doubt as to that. He had studied its growth hour by hour. As the great steel web rose, his heart expanded with it. He took pride in it even more when they began to push the suspended span across the river on the outer end of the completed cantilever, toward its fellow rising on the other side. He lingered about it when the rest of the workaday world which was concerned with it had withdrawn to rest. Frequently late in the night he had arisen and had left the sheet-iron shack he occupied near the work (for the topography of the land and the course of the river had determined the location of the bridge far from any town), and in the moonlight he had gazed bewitched by the great web of steel, all its mighty tracery delicately silvered, faintly outlined, lacelike, lofty, lifted high into the heavens.

He fell into a little reverie for a brief moment from which she recalled him.

"Well?" she asked.

"Yes, naturally," he found himself saying in a conventional tone of voice, "it means a great deal to me. My father—"

"Oh, your father," she began indifferently, although she knew and liked the great engineer.

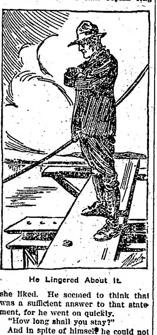
"It is his crowning work and—"

"Your beginning."

"It is not in me, or in any engineer, to begin where my father left off," he said. "But this will count a great deal, because through father's kindness I had some hand—"

"I believe you did it all," interrupted the girl.

He broke into sudden laughter, and his merriment had that boyish ring she liked. He seemed to think that was a sufficient answer to that statement, for he went on quickly.



He Lingered About It.

"How long shall you stay?"

And in spite of himself he could not keep his anxiety out of his voice.

"I think father's going on to the city sometime tomorrow—probably in the morning."

Meade's face fell.

"So soon as that?"

"I will try to persuade him to stay longer. I've seen lots of bridges built but never one like the International, and I should enjoy standing by and watching you work."

"I don't do the work. Abbott does that, and the men, of course."

"Your work is the work that makes possible and profitable the labor of the others," she answered. "You plan, you lead, the rest only follow. By the way, father told me to ask you and Mr. Abbott to dine with us tonight in the car."

Meade's mood changed into positive gloom.

"I can't," he said dejectedly. "I haven't any clothes, neither has Abbott. We left our dress suits behind us when we came into the wilderness to work."

"Oh," she laughed. "What difference does that make? Come just as you are. It will be a relief. I like you that way. I get so tired of black and white," she went on quickly to prevent him from taking advantage of her incautious admission.

"Hang the clothes," said the man, radiant once more in that admission, "since you will allow it, I will come with what I can rake up. But you'll have to tell me which fork to use. I have almost forgotten out here in the wilderness."

"It isn't six months since you were at our house."

"Six months! It's a thousand years," he went on, "and I'm going to take you out on the bridge after dinner. It's great at any time. It's the most magnificent sight on earth even now, but in the moonlight—there it is now," he pointed as the little group walked past the station which had hid the view and the great structure suddenly was revealed to them.

The four men ahead had stopped and stood silent. There was something awe-inspiring and tremendous about the great, black, outreaching, far-extending arms of steel. The first sight of it always gave the beholder a little shock. It was so huge, so massive, so grandly majestic, and withal so airy, seen against the impressive background of deep gorge and palisaded wall and far-off mountains. So ether-borne was it in its perfect proportion that even dull and stupid people—and none of these were that—felt its overpowering presence. Meade and the girl stopped too. After one glance at the bridge, she looked at him. And that was typical. For the first time he was not at the moment aware of, or immediately responsive to, her glance. And that, too, was typical. She noted this with a pang of jealousy.

"You love the bridge," she said softly.

He straightened up and threw his head back and looked at her.

"I thought so," he said simply—"until today, but now"—he stopped again.

"But now?" she asked.

"I have just learned what love really is and the lesson has not been taught me by a bridge," he answered directly.

Yet Bertram Meade, the younger, did truly love the bridge which he had seen grow from the placing of the first shoe—the great steel base on top of the pier which carries the whole structure—to the completion of the soaring cantilever reaching out to meet its companion on the other side—the great International, which was to be the tie that bound, with web of steel, two great countries which lay breast to breast; already in touch save for the mighty river that flowed between them.

By no means would Meade, the younger, have been charged with the great responsibilities of the bridge had it not been for his exhaustive preparation and wide experience. To a thorough technical training at Harvard, in the Lawrence Scientific school, had been added a substantial record of achievement. A fine bridge which he had erected in faraway Burma, triumphantly achieving the design despite all sorts of difficulties, had attracted the attention of old Colonel Illingworth, the president of the Martlet Bridge company.

He had kept the young man under his eye for a long time. When he commissioned his father, Bertram Meade, Sr., to prepare the plans for the great International, the most-sought-for and famous of bridges, he had noted with satisfaction that the older man, who stood first among bridge engineers on the continent, had associated with himself his son. Meade, Jr., had recently returned from South America, where he had again shown his mettle. The two worked together in the preparation of the designs for what was to be the crown and triumph of the older man's life, the most stupendous of all the cantilever bridges in the world.

The great engineer had a high idea of his only son's ability. He was willing to proclaim it, to maintain it, and defend it against all comers except himself. When the two wills clashed, he recognized but one way, his own. The relations between the two were lovely but not ideal. There was leadership not partnership, direction rather than co-operation. The knowledge and experience of the boy—for so he loved to call him—were of course nothing compared to those of his father. When, in discussing moot points, the younger man had been unconvinced by the calculations of the elder, he had been laughed to scorn in a good-natured way. His carefully set forth objections, even in serious matters, had been overborne generally, and by triumphant calculations of his own the father had re-enforced himself in his conclusions; and the more strongly because of the opposition.

Young Meade's position was rather anomalous. He had no direct supervision of the construction. He was there as resident engineer representing his father. He had welcomed the position because it gave him an opportunity to see from the very beginning the erection of what was to be the greatest cantilever bridge the feet of the world had ever trod upon, the wheels of the world had ever rolled across. He had followed with the utmost care, constantly reporting the progress to his father, every step taken under the superintendence of Abbott, a man of great practical ability as an erector, but of much less capacity as a scientific designer or office engineer. Meade had watched its daily growth with the closest attention. Like every other man in similar case, the work had got into his blood. It had become a part of his life. He loved the bridge; yet more he loved Helen Illingworth.

It Had Been a Part of His Life.

CHAPTER II.

The Witness for the Defense.

One of the pleasant evidences of the possession of riches is in the luxury of a private car. Although Colonel Illingworth was personally a man of simple tastes as became an old campaigner, there was no appointment that wit could devise or that money could buy which was lacking to make his private car either more comfortable or more luxurious in its napery, glass, china and silver, the dining table needed not to apologize to any other anywhere. The colonel was most punctilious in dressing his part and Meade and Abbott were both scrubbed to within an inch of their lives, but, climbing about the bridge, their hands were scratched, roughened, stained and torn. Aside from that, Meade was certainly most presentable, and old Abbott, in spite of his indifference to such matters, looked the able and powerful man he was.

The conversation at dinner was at first light and frivolous.

"I'm lost," began Abbott, "overpowered with all this silver and glass and china."

"Yes," laughed Meade, "we should have brought along our granite ware and tincups, then we would be free from the dreadful fear that we are going to drop something or break something."

"You can break anything you like," said the colonel with heavy pleasantry, "so long as the bridge stands."

"And that is going to be forever, isn't it, Mr. Meade?" asked Helen quickly.

"I don't think anything built by man will survive quite that long," he answered as much to her father and the others as to her, "but this gives every promise of lasting its time."

"You know," observed Curtiss, "there was some question in my mind about these big compression members. When I first studied your father's drawings, I wondered if he had made the lacing strong enough to hold the webs."

"That matter was very thoroughly gone into," said Meade quickly. "It was the very point which I myself had questioned, but father is absolutely confident that we provided latticing enough to take up all the stresses. I looked into that matter myself," he went on with much emphasis.

"I guess it's all right," said Curtiss lightly. "I examined the webs and lacings carefully this afternoon. They seem to be as right as possible."

"Those trusses," said Abbott emphatically, "will stand forever. You need not worry about that."

"Are you going to finish this job on time?" asked Severence, the vice president. "You know the financial end of it is mine, and much depends upon the date of completion."

"That depends upon you people at the shop, doctor. If you get the stuff here to me I'll get it in place in short order," answered Abbott.

"We aren't worrying about anything with you and Meade on the job, Abbott," said the colonel genially.

"Yes, you are, father," said the girl. "Ever since the International has been started you have scarcely been able to give a thought even to me. I'm tired of it. I hope the old thing will soon be finished, so that we can all go back to normal life again."

"I hope so, too," assented the colonel, "and I guess you are right. The fact is the bridge is an obsession with us all. It is the biggest job the Martlet has ever handled. Indeed, it is the biggest thing in the world. It's the longest cantilever, the greatest span, the heaviest trusses, the—"

"I've heard all about it," interrupted the girl, waving him into silence, "ever since you began it. Sometimes I think it's beginning to obsess me, too."

"You don't look like it," whispered Meade, under cover of the general laugh that greeted her remark.

"What do I look like?" she whispered back quickly, in return.

But Meade had no opportunity to tell her.

"It is not exactly a subject for dinner conversation," said the colonel with sudden gravity, "but all of us here, even you, my dear, must realize how much that bridge means to us. I won't go so far as to say that its failure would ruin us, but it would be hard for us to survive."

"Have you ever known anything that my father designed to fail?" asked Meade somewhat hotly.

"No, and that is why we took his plans in spite of—"

"In spite of what, sir?"

"In spite of Curtiss here and some others."

"Mr. Curtiss," said Meade, turning to the chief engineer, "if it will add anything to your peace of mind, I will assume my full share of responsibility for the matter. You know the books by Schmidt-Chemnitz, the great German bridge engineer?"

Curtiss nodded.

"At first I—that is, we—thought that there might possibly be weakness in those compression members, but I checked them with the methods he advocates and then submitted the figures to my father, and then he went through the whole calculation and applied coefficients he felt to be safe."

"I'm willing to take your father's judgment in the matter rather than Schmidt-Chemnitz', or anybody's," said Curtiss, "so successful has been his career."

"Now that I have seen the members in place I have no doubt that they will stand," said the colonel.

"Sure they will," added Abbott with supreme and contagious confidence, an assurance which helped even Meade to believe.

"Of course we all know," said Doctor Severence, who had been long enough in touch with engineering to learn much about it, "that there is always more or less of experimenting in the design of a new thing like this."

"Yes," said the colonel, "but we don't want our experiment to fail in this instance."

"They won't," said the young man boldly.

He had long since persuaded himself that he had been all wrong and his father all right, so that he entered upon his defense and the defense of the bridge with enthusiasm. He was ready to break a lance with anybody on its behalf.

"Well," began the colonel, "we have every confidence in your father and in you. I don't mind telling you, Meade, it need not go any further, that when this bridge is completed we shall be prepared to make you personally a very advantageous offer for future relations with the Martlet company if you care to accept it. On the strength of your probable acceptance we are already planning to venture into certain foreign fields which we have hitherto not felt it to our interest to enter."

"That is most kind of you, Colonel Illingworth," said the young man gratefully, "and it appeals to me very strongly. I have been associated with father latterly. He wants to retire with the completion of this bridge, and before I open any office of my own I should like the advantage of further experience. Such a connection as you propose seems to me to be ideal, from my point of view. No man could have any better backing than the Martlet Bridge company."

"Well, we shall look to you to be worthy of it," said the colonel kindly.

His glance vaguely comprehended his daughter as he spoke. Colonel Illingworth was a very rich man. The Martlet Bridge company was nearest his heart, but he had many other interests. His only daughter would eventually be the mistress of a great fortune. Meade was not poor. Of course, his means were limited compared to Colonel Illingworth's great fortune, but what he had earned, saved, and invested was sufficient—yes, even for two. And he would inherit much more. Old Meade had not been the greatest engineer of his generation for nothing. Independent and self-respecting, young Meade could not be considered a fortune hunter by anybody. He was the kind of man to whom a decent father likes to intrust his daughter. Old Colonel Illingworth found himself gazing wonderingly at the two.

After dinner the men sat out on the observation platform with their cigars and coffee. For those that liked it there was something in tall glasses in which ice tinkled when the glasses were agitated, but Meade declined all three.

"With your permission, sir," he said, "I am going to take Miss Illingworth out on the bridge. The moon is rising and—"

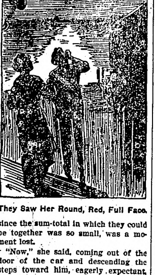
"I have heard so much about it," said the girl, standing by the door. "I want to see it when the workmen are all off and it is all quiet, in the moonlight."

"Very well. You had better change your dress, Helen, before you go," said the colonel, turning to Abbott and engaging him in conversation on technical matters.

"I'll wait for you at the front door of the car," said the engineer, his heart beating like a pneumatic riveter and sounding almost as loud in his ears.

"I won't be long," she whispered as she left him.

Helen did not want to waste time any more than Meade did. So, instead of taking her father's advice, all she did was to cover her beautiful shoulders with a light wrap and hasten to the car door in the shortest possible time. Every moment they were apart, since the sum-total in which they could be together was so small, was a moment lost.



They Saw Her Round, Red, Full Face.

"Now," she said, coming out of the door of the car and descending the steps toward him, eagerly expectant, "I want a prize for my swiftness."

"A prize!" returned the man, "why, you've been gone years, and you haven't even changed your gown. You can't go out on a bridge in that gown and those slippers, tramping over dirty tracks, piles of steel, rough wooden planks, paint and—"

"Can't I?" she said; "you just see."

"I hate to see you spoil your dress," he said uncertainly as she stopped.

Really what gown on earth was worth half an hour of her society? At least that is the way he felt about it and evidently she felt the same way.

"It is settled, then," she said, slipping her arm through his as they walked down the long wooden platform near the siding. At the end the platform, as they turned about t temporary station and storehouse fore them rose the bridge. The mo was rising over the high hills th sprang up from the steep clifflike bar of the other side of the vast rive They saw her round, red, full fac through an interlacing tracery of ste The lower part of the bridge was sti in deep shadow. Indeed, the moon ha just cleared the hills of the opposit bank of the great gorge cut by th broad river flowing swiftly in its darkness far below. At the farther end c the suspended arm extending far ove the water the top of the traveler gli tened. The cantilever on the opposit shore, incomplete and sunk under high rise of sand, was still in shad and not yet discernible.

Unwittingly the woman drew a littl near the man. He became more conscious than before of the light touc of her hand upon his arm. It was ver still where they stood. The shack of the workmen had been erected below the bridge about a quarter of mile to the right along the banks of the little affluent of the main stream. They could hear faint but indistinguishable noises that yet indicated humanity coming from that direction. The fires in the machine house and the engines were banked. Lazy cur of smoke rose to be blown away in the limitless areas of the upper air. In the darkness all the unsightly evidences of construction work were hidden.

"Oh," said the woman, drawing a long breath, "I don't wonder that you love it. Isn't it beautiful, flung up in the air that way? One would think it wasn't steel but silver and gold and—"

"Time was," said the man, "when I loved a thing like that above everything except my father, but now—"

In spite of herself the woman looked at him.

"But now?" she whispered as he hesitated, and then she turned her head half fearful of his answer.

"I am almost afraid to say it," he said, lowering his voice to match her own.

"A soldier of steel," she said, "and afraid!"

"Well, then, all that was the second now takes the third place."

"And before your father comes?"

But she did not give him time to answer. "Come," she said, "let us go out on the bridge."

"It's a rough place for you. Those little slippers you wear—"

He looked down, and as if in obedience to his glance she outthrust her foot from her gown. It was not the smallest foot that ever upbore a woman. Quite the contrary. Which is not saying it was too large, not at all. It was just right for her height and figure, and its shape and shoe left nothing to be desired.

"Never mind the slippers," she said "they are stronger than they look. They'll serve."

"But the distance between here and the bridge is inches deep in dust."

"Dust!" she exclaimed in dismay. "I don't mind rough walking, but dust—"

"I never thought of that," admitted the man. "The fact is I have thought of nothing but you since I saw you, but now we'll have to go back or—"

"I shall not go back," she answered firmly.

He stepped down off the platform, and before she knew what he would be at, he lifted her straight up in his arms. He did not carry her like a baby, he held her erect, crushed against his breast, and before she had time to utter a protest, or even to say a word, he started through the dusty roadway toward the bridgehead.

It was a strange position. She knew she ought to protest, but the words would not come. Whilst she was trying to think them up, they had crossed the little desert that intervened between the portal of the bridge and the end of the platform. Then he set her down gently.

"Thank you," she said simply, "that was very nice of you. You are wonderfully strong."

The moon, by this time, had passed the floor level and the cross-bracing cast a network of shadows over them, upon track and floor beams and stringers. The silence of the half-light, the mystery of it all oppressed them a little. It was with beating hearts that they pressed on.

EARLY AND GENTLE TRAINING

Task of Halter-Breaking Heifer Calves Cannot Be Begun Too Early—Handle Them Daily.

Halter-break all the heifer calves before they get very large. Can't do it too soon. No matter whether you ever lead your cows or not you want them broke to lead. Handle the calves daily as they grow. Rub them, fool around their hind quarters so that they will not be scared or ticklish the first time they are milked.

FOR PURE DAIRY PRODUCTS

Clean Milk, Quick Cooling and Prompt Delivery Are Factors of Much Importance.

The number of bacteria in milk depends largely upon cleanliness of milking and handling, temperature at which milk is kept and age of milk. Therefore, clean milk, quick cooling, and prompt delivery are very important factors in producing pure dairy products.

Mrs. Ole Tharaldson and her two daughters Opel and Evelyn visited with Mrs. A. Vake Sunday afternoon.

H. R. Leslin of Rhinehart was seen in this vicinity Sunday.

Otto Parnow was seen in Erie Saturday evening.

Herman Sunsdahl and Daniel Danielson called at the A. Vake home Sunday.

Notice.

Notice is hereby given that a special election will be held in the District No. 8 of Pennington County at the Schoolhouse on the 5th day of March 1917 from one o'clock P. M. to four o'clock P. M. for the purpose of voting on the proposition of issuing to the State of Minnesota the bonds of said municipality in the aggregate sum of $10,000 00 bearing interest at the rate of four (4) per centum per annum, the proceeds thereof to be used for the following purposes: $5000.00 for taking up the floating indebteness, $5000.00 for installing new heating plant and finishing the upper rooms to be numbered and to mature as set forth in the resolution now on file in the office of the clerk.

Dated February 21st 1917.

Nick Bundhund, Clerk.

The financial committee looking after Rev. Bostrom's salary take the opportunity to state to those in arrear that they should appreciate very much that portion subscribed for Jan. and Feb. due him as a report is required covering this time. A statement will be given from the Pulpit regarding this matter.

Anent The Proposed Bond Issue

When the first bonds of $10,000 were issued against our district, the assessed valuation of the real property prohibited a larger issue Those $10,000 were found inadequate to carry the cost of a modern building that could not be erected for less than $15000. The difference created the present.

FLOATING INDEBTEDNESS of $5000, which draws interest at six per cent per annum. The district is liable for this debt whether it exists as at present, in the shape of a floating debt at six per cent interest or in the form of bonds at the rate of four per cent. $7500 at four per cent is equal to $5000 at six per cent. That means that we can borrow fifty per cent more under the bond proposition and still have no more interest to pay than at present. This is only an application of common sense, isn't it? Bonding will improve our credit, lower the rate of interest, and give us all the usual advantages of being on a cash basis.

$5000 will take care of the floating indebtedness. An additional of $5000 is needed to install a STEAM HEATING PLANT and to finish the upper story of the building. The necessity for a better heating system is obvious to all patrons of the school and to everybody else that have had any connection with the institution during the two years past. In spite of of the fact that a good roaring fire has been kept going all night, and the fan has been kept running above two hours practically every morning before the opening of the morning session, it has often been necessary to send the children home or to crowd them into one or two rooms. Both of these methods are unsatisfactory. They are conducive neither to good discipline nor to steady work, and when it happens day after day it retards the regular work to such an extent that it becomes well nigh impossible for some of the pupils to make their grade.

This condition can be attributed to but one thing; namely the inadequacy of the present heating system. It is plainly not large enough for the size of the building nor suited to our northern climate.

Besides the necessity of keeping the children warm and comfortable, there is one other point to consider, that is the future growth of the school. In the near future we shall apply for a position as a class A. consolidated and as a graded school. For entrance to the graded list the state requires steam heat or hot water. Then we shall draw $500 state aid for the former and $600 for the latter a total of $1100 as compared with the $250 we now receive.

At the same time that the steam heating plant is installed the UPPER STORY should be completed. It is very necessary to provide more room, and it will be cheaper to do it now than later. A class in high school work will be started next year; and with the necessary addition of another teacher, more room will be needed. There is quite a number of young people in our district now, who are anxious to enter high school. If we do not provide them with high school facilities here, they will have to choose between going away to school or give up school altogether. The first alternative is an expensive experiment, as those know who have children away at school. It is also a hazardous one; the more the children can be under home influence the better. Giving up school altogether is a hard task for many a child that has an ambition. It has shattered many a boy's and girl's dearest hopes This ought not to be so.

Taking these things into consideration does a total bonded indebtedness of $20,000 seem too large? Let us see, careful figuring discloses the fact that as the present assessed valuation of the district, including both the county and the village, the total tax on each quarter section of land outside of the village will amount to approximately one hundred and fifty dollars. At four per cent the interest on this will amount to six dollars annually. This will neither make nor break anybody in the district. It should not stand in the way of completing what splendidly has been begun.

The game of polo was introduced into Britain from India in 1872.

Even the man who is a dreamer attracts attention—when he snores.

Dietz Battle of Cameron Dam

In Moving Pictures At The Grand Theatre Saturday Evening March 17th.

Nearly every man, woman and child have heard of the Dietz family of Cameron Dam, Wisconsin. John Dietz left Rice Lake to make a home for himself and family in the northern woods of Wisconsin. They purchased a tract of land from the Cameron estate. The Lumber Company insisted upon using Dietz's property without making any payment whatever.

Hounded almost to starvation, John Dietz and his family undertook to protect their home and property against a powerful corporation. The odds were to great, the fight was lost, and John Dietz was sent to prison for a crime he never committed.

A wonderful film taken on the actual fighting grounds and the entire Dietz family are shown in their fight for rights, lectured by Leslie Dietz. Showing the battle of Cameron dam where over 1000 bullets struck the Dietz cabin where John Dietz defended his home and rights against a piratical Lumber company, will be shown at the Grand Theatre at Goodridge, Saturday, March 17th. Dance after show.

Hamre News.

Mr. C. P. Thompson and wife made a trip to Thorhult Monday.

Ole Brekke left for Halstad, Minn. Monday to see the Doctor.

T Thorjnson called on Sviningson Thursday.

Mrs. C. Thompson and son Oluf, Mrs. T. Thronsen, and Mrs. A. Brekke attended the Ladies Aid at the Knute Johnson home Thursday. The next meeting will be at the Ole Neslavds home, Thursday, March 8th.

Clarise, Myrtle and Otto Knutson left for Thief River Falls Tuesday, where they will work for some time.

Hazel Sorneson spent Thursday with the Thronson family.

Henry Morken is laid up for a few days on account of having a bad cold sore on his cheek. "The Kissing Bug" must have been to close.

B. K. Homme and I. O Lillivold are busy sawing lumber now days.

Clarence Perle called on Ole Knutson Thursday.

Joe Vann from Madicine Hat, Canada came out here Wednesday to look after his farm interests, and to visit old friends. He returned home Monday.

Bennie Howland and family and Mr. Burhart were Grygla shoppers Saturday.

Ed. Thronson visited a few hours with the Grande family Thursday.

Mrs. A. Brekke from Kratka, accompanied Walter Dalton from Goodridge last week to visit relatives and friends.

Mrs. Osborn transacted business in Grygla last part of the week.

Mr. Howland and wife and son Oliver spent Friday evening of the Thronson home.

Gave Him Away.

With a stormy look on his face, the master of the house waylaid the servant in the kitchen.

"Look here," he began angrily, "how dare you tell my wife what time I came home this morning, after I had told you not to?"

The Irish girl eyed him steadily.

"Shure, an' Oi didn't!" she replied calmly. "She asked me phwat toime yez came in, an' Oi only towld her that Oi was too busy gettin' the breakfast ready to look at the clock."—London Mail.

HAPPINESS.

"I am sometimes accused of being too optimistic, but I have never denied the troubles and sorrows of life. I never said that men are happy, but only that they might be; that if they are not so the fault is generally their own; that most of us throw away more happiness than we enjoy."

DAIRY

BALANCED, RATION FOR MILK

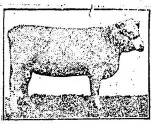
Cow Must Be Given Combination Necessary to Maintain Her Functions and Produce Milk.

For the most profitable milk production, the cow must be fed a balanced ration at the cheapest price such ration can be provided. By balanced ration is meant the combination of such a proportion of nutrients and in such quantities as the cow requires to maintain her bodily functions and as she can utilize in the production of milk. These nutrients are classified as protein, carbohydrates, and fats. Protein is one of the principal constituents of milk; fats and carbohydrates perform much the same functions, that is, produce energy and heat, and in the balancing of a ration are usually classed together. If the cow is given a ration containing an excess of either element, the excess is liable to be wasted; hence the economical importance of a balanced ration.

USE SHORTHORNS FOR DAIRY

American Association Representing This Class Fixes Basis at 60 Per Cent for Milk.

The question is often asked, in judging dairy, or dual-purpose Shorthorn cattle, how much is allowed for beef and how much for milk. The American association representing this class of cattle fixed the basis at 60 per cent for dairy qualities and 40 per cent for beef. This is a very good basis to work from. More should be given for dairy, for this is most likely to be deficient, and a larger rating will have a tendency to stimulate the dairy development. Some stock shows and fairs fix the ratio at 50 per cent for each; but the rating given above seems better. More emphasis is being placed on the development of the dairy qualities of this breed, bringing it back to its original standing among the breeds of the world—one of the best for dairy purposes.



First Prize Shorthorn Heifer.

SILAGE IN PRODUCING MILK

Increase of 17 Per Cent Is Seen in Test Conducted by Ohio Experiment Station.

Cows fed a ration composed largely of silage produced 17 per cent more milk and 28 per cent more butterfat than those given a ration consisting mainly of grain in a feeding test conducted for 121 days at the Ohio experiment station. The silage ration was also cheaper for milk production.

PREVENT LARGE DAIRY LOSS

Contagious Abortion Costs Farmer and Stockman $20,000,000 Yearly in Dead Calves.

Every farmer and stockman should fight contagious abortion in his district, and do his part to save $20,000,000 loss in dead calves and sterile cows. The disease is preventable and controllable. Isolate affected animals, treat aborting cows, disinfect the bulls and clean up the premises. This is good business for cattle owners.

COMMON CAUSE OF TROUBLE

Next to Overfeeding Calf Is That of Feeding Milk Too Cold—Feed at Blood Heat.

Possibly next to overfeeding the calf on milk, the commonest cause of trouble is that of feeding milk too cold.

Feed milk at as nearly blood heat (98 degrees F.) as possible and remember that 20 degrees below blood heat may result in a case of scours with very young calves.

The ELEVEN TOWNS

Entered at the postoffice at Goodridge, Minn. as second class mail matter.

We are pleased to note that our Legislature is favorable towards an appropriation to combat the spread of infantile paralysis. We might suggest that the $50,000. which was to be used in fighting the I. W. W's, would be better spent in combating this dread disease among children. If our law makers would forget to listen to private individuals with an ax to grind, there would be less critism of their action. This is a measure in which the people is interested and should receive the unconditional support of the Legislature.

It is reported from the county seat that the police have again pulled in the drag net and found a nice bunch of blind-piggers ensnared in its meshes. When will men learn to know that the illegal sale of booze must be stopped? We cannot understand why anyone will endeavor to evade the law in this respect. Can there possibly be so much profit in the peddling of this stuff that men are willing to take such desperate chances, or is it simply a state of mind? Here is a problem in psychology we wish some one would solve.

The jingos and militarists are at it again. This time congress will be asked to pass a law giving the President authority to prohibit any criticism of the Army and Navy or any propoganda against preparedness. Is this country an oligarchy or a republic? Can anything be more autocratic and less democratic? Our forefathers fought and bled to establish the principals eunciated in the Declaration of Independence and later embodied in the Constitution, but these men care little about that. The Constitution is a great instrument to them as long as its provisions sustain their intentions, but to h— with it whenever its provisions are in the way for their plans.

The Insurance Federation of Minnesota is out to defeat a bill introduced in the Legislature, calling for state insurance of working men. Insurance agents throughout the state have received letters requesting them to use their influence with the lawmakers to kill the bill. We surmise that this is another move by the vested interests to defeat a good law, and would urge our readers to ask our senator and representatives to stand by the measure. At present, rates for compensation insurances are almost prohibitive, and small contractors are forced to carry their own risks or pay the entire profit of their contracts to insurance companies for protection. Practically all the money paid for this kind of insurance goes out of the state, and a goodly postion of it across the ocean into the coffers of English corporations. State liability insurance is now in force in Wisconsin and other states, where it has worked out to the entire satisfaction of the people. It is the only just and equitable way of carrying this risk and we are in favor of having such a law put on the statute books of Minnesota.

The editor of the Thief River Falls Times cannot understand the reason for bread riots when our country is so prosperous. We always felt that he was rather light when it came to figuring out problems that confront the public. A trip to some of our large industrial centers and a year or so spent as a working man in New York City would open his eyes. Prices on food stuffs have gone up on the average three times as fast as the wages. The simple reason for the bread riots is that the workers find that their meager wage no longer suffices to buy bread and that work as hard as they can, they still are forced to starve. And then he goes on to say that "with every man at work who wishes to work", he cannot account for it. Where did you learn that every man had work. We make a guess that in his own city there are more than a hundred able bodied men right now willing to work who cannot find an hours labor. Just insert an adv. in your paper, Mr. Editor, telling them that you have work for five men at $2 a day and we miss our guess if you will not hava five times as many applicants as jobs. Try it as an experiment.

Von Bethmann-Hollweg, Chancellor of Germany

Dr. Theobald von Bethmann-Hollweg, imperial chancellor of Germany, whose recent speech in the reichstag caused a worldwide sensation, is the fifth man to hold that high office since Germany was erected into an empire. Bismarck was the first; then in order came Caprivi, Hohenlohe and Von Buelow, whom the present chancellor succeeded in 1909.

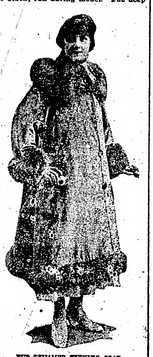
Von Bethmann-Hollweg is a Prussian, sixty years old, and was at Bonn university when the kaiser was there as a student. The two were fast friends and belonged to the same fraternity, and it is said that Bethmann-Hollweg owes his rise through politics to the friendship then formed. It is said of him that he is a philosopher rather than a great statesman, although he is by no means lacking in statesmanlike qualities. Modest and retiring, there is nothing flamboyant in his makeup. He is, above all, thoroughly sincere and honest, and his influence is always on the side of moderation. The tricks of the professional politician and diplomat are beneath him.

DR. VON BETHMANN-HOLLWEG.

What Housewives Are Glad to Know

Last Thing In Coats

The chic and becoming evening coat for misses is featured in chiffon velvet in gold, French blue, coral, green, rose or black; full flaring model. The deep cape collar, cuffs and border are trimmed with mouflon fur. This coat can be worn fastened or open at the neck. The garment is lined throughout with soft silk, warmly interlined. Design by Franklin Simon & Co., New York city.



FUR TRIMMED EVENING COAT.

Getting Acquainted.

"We hesitated about renting this place," said the woman who had just moved in, "until we learned that the families on both sides of us owned their houses. It is so unpleasant to live where the people next door are always changing and you never know what kind of neighbors you are going to have."

"Yes," responded the woman on the other side of the fence, "that's one reason why we're trying to sell our house."—Chicago Tribune.

Home Town Helps

SITE SHOULD FIT THE HOME

One of the First Things One Must Remember When Making Plans to Build the House.

Most of the suburbanites who are saving to build a house—the sort they have dreamed of possessing—give so much attention to the actual plans of the dwelling that they do not stop to think at all of the vast importance of the house's setting.

There are joys and profits in site hunting, and the average home-builder who is willing to content himself with the first strip of land in a desirable neighborhood with which his real-estate dealer confronts him never guesses.

Obviously, the average suburban lot is the "flat, treeless, 50 by 100," on which, of course, there is little possible latitude in building. The house must be oblong and stand on one of its ends about in the center of the lot, with an inconsequential margin on either side of green in front and rear. There are interminable streets of these in every suburb.

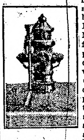
But in every suburb also there are odd corners that have been passed by as unsuitable. Like the neglected creed beds in the farmer's fields, they are generally in odd shapes and wooded, the hand of the "improver" having passed them as hopeless. In rural districts where land is rated by its cultivatable area, these are literally waste and can often be bought for very little.

One of the least-appreciated kind of sites for a home is the gully or draw. Everywhere among the hills there are places where the waters have cut out a bed to the rocks and a stream splashes swiftly downward among the trees.

If you have a definite plan for your house in mind before you have an idea for the site, you should seek your site to fit the home. A chateau would be out of place where a bungalow cottage would be wholly at ease. A barn might be badly misplaced on the ideal site for a farmhouse. Your house, as has been said, is the chief element in your composition.

DRINKING FOUNTAIN FOR CITY

Are Attached to Fire Hydrants, and Have Been Installed in Prominent Eastern Places.



Sanitary drinking fountains designed to be attached to fire hydrants have been installed at a number of places in Rochester and New York city for the benefit of pedestrians. The device is an invention of an employee of the department of public works of the former city and is being installed in Gotham by a temperance society and social - welfare organization in districts where a drink is a difficult thing for a person on the streets to get except in saloons and soda emporiums. The contrivance is of the bubbling-cup type and drains through a waste pipe into a gutter adjacent to the plug to which it is attached.—Popular Mechanics Magazine.

Abused Superlatives.

It is hard to make people understand that the adjective almost invariably weakens the noun, and that the word "very," for instance, does not strengthen a statement, but qualifies it. A good example might be taken from the August communications of our president, who weakens the word "sincere" by saying "very sincere." But the use of the superlative is even more abused. We talk of the "unimpeachable" honesty of somebody or other, knowing perfectly well that anybody's honesty may be impeached. What seems to be required is a readjustment of our habits of thought, and better teaching of the value of words and even of the usefulness of grammar. A superlative necessarily involves an axiom. It commits you, like saying that the sum of the angles of any triangle is equal to two right angles. Your dilemma arises when you try to prove it. "Impregnability" and "invulnerability," and all the other superlatives in such general use are posing as axioms when they are mostly fallacies.—Wall Street Journal.

Outlawed Rob Roy.

When the sheriff court was removed from Inverarary to Dunoon, there was among the documents the proclamation making Rob Roy an outlaw. The letter-press is as black as when it left the press of the king's printer, nearly 200 years ago. The indorsement is as follows: "Proclamation for the accusing and apprehending Robert Roy Campbell, alias McGregor, dated 10th March, 1718. 27th March, 1719.—Published at the Mercat Cross of Inveraray by John McPherson, messenger, before these witnesses: James Campbel, Provost there: Archibald Campbel and Charles Stewart, writers there, and divers others."—Edinburgh Scotsman.

The DAIRY

PRODUCTION OF BLOODY MILK

More Objectionable as Matter of Appearance Than as Menace to Health—Various Causes.

Bloody milk is more objectionable perhaps as a matter of appearance than as a menace to health. Hemorrhages may occur within the udder as a direct result of a bruise caused by rapid motion, by a bad position while the cow is lying down, by the tread of a cow in an adjoining stall, or because of the breaking of a tiny blood vessel or the escape of red corpuscles through thin vessel walls. Heavy feeding may also produce bloody milk.

The remedy is careful milking and light feeding with laxative foods and repeated small doses of mild physic. When the trouble occurs with cows giving a heavy flow of milk and under heavy feed, improvement follows a marked reduction of the ration. A change of stall may give good results, if it allows a cow to obtain a better position and avoid uneven pressure on the udder while lying down. Cows with long, heavy udders should be driven slowly and should not be driven over high sills.

IMPORTANT FOR DAIRY CALF

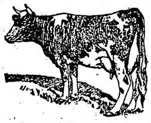
Modern Experiments Show That Good Flesh Is Desirable Feature—Mixture for Grain Feed.

The importance of feeding and caring for dairy calves is emphasized by J. B. Fitch, associate professor of dairy husbandry in the Kansas State Agricultural college.

"Calves should be fed whole milk until they are one month old, when they should be changed to skim milk," said Professor Fitch. "They should be fed skim milk until they are six months old. While they are on milk they should be given grain and alfalfa hay.

"A good mixture for grain feed is four parts of corn or corn chop, one part of oil meal, and two parts of wheat bran. After taking the calf off the milk increase the grain gradually to two pounds a day in addition to silage and alfalfa hay.

"It used to be considered that good flesh was undesirable in dairy calves, but experiments show that this is not the case and that quite the contrary is the case, especially before calving.



Guernsey Is Desirable Type.

"The heifer should be bred so as to calve when from twenty-four to thirty months of age, depending upon the breed and growth of the animal. The Guernsey and the Jersey should be bred so as to calve when from twenty-four to twenty-six months old, while the Holstein and Ayrshire breeds should be bred so as to calve when thirty months of age. If bred so as to calve earlier than this, their growth is apt to be injured."

BEST PLACE FOR MILK ROOM

Should Be in Some Building Other Than Barn—Northeastern Exposure Is Favored.

The milk room should be in a building other than the barn. It should be located if possible with a northeastern exposure. Immediately after being drawn the milk should be strained and put in shallow pans to cool quickly. This applies to conditions where a milk cooler cannot be used.

Where no separator is available it is necessary to cool the milk as soon as possible to enable the cream to rise. Where five or more cows are milked it is advisable to invest in a cream separator, because running the milk through a separator immediately after milking is the best way known for getting absolutely clean milk, even if the whole milk is to be used.

BE SUCCESSFUL WITH COWS

Plenty of Feed and Balanced Ration Essential—Grain Should Be Supplied in Winter.

To be successful with cows one must be a good feeder. This takes plenty of feed and a balanced ration. To get milk in winter, grain should be fed. With butterfat at 35 cents it can be fed with profit. If silage with fair corn in it is fed use enough bran and cottonseed meal or oilmeal to balance the ration. Where alfalfa is fed the grain ration may be largely reduced.

Inspiration Miscellany

Your Work and Why It Is Done

There is a reason for everything, but we don't know the reason for everything. There's a reason why black is black and white is white, and there is a reason for knowing which is which.

So in your work find out the reasons for doing things. You will work better. You will earn more, for this is what is meant by the big expression "standardization of work" It is getting the best returns for the least expenditure of energy.

The world is strewn with lost energy. The bulk of the loss could be avoided if only workers found out the reason and remedied the leakage. Most women rush headlong to a task. Now, I advocate quick action and decisions. But I object to blind, headlong rushes.

When put to a task find out the cause of its being done. Get a definite idea of your work. Get a realization of what it leads to. Find out why.

What would you think of an architect who built a house without working drawings or an artist who painted a picture without making a sketch of his work? For the same reason make a picture of your work—figuratively.

Every piece of work done in a factory or in business house has an influence on something else. That is why your work tells in the long run. From the office boy to the director the work of each member of a firm is necessary. If the office boy forgets to mail an important letter it means a loss to his office. Accuracy in all work helps to create a solid system and a smoothly current running of affairs. That is why your work, however unimportant it is, must be done with exquisite care. Never say, "Oh, it doesn't matter." It may not matter to you, but it does matter for the welfare of the concern.—St. Paul Pioneer Press.

The Courage of Life

The two virtues that help us along most in life are trust and courage. Apart from the tragedies invited by sin and violence and self indulgence, a large part of our trouble comes from anxiety, distrust, apprehension. It was not all frivolity that dictated the answer of a young girl who, being urged to prepare herself for a profession or a definite work, responded: "I'm not going to look ahead and worry. I can do a lot of useful things. I can mend, and make salad, and amuse children, and be patient and economical, and help people to enjoy themselves, and I don't believe nice girls starve." Courage and faith are always assets. Even if life goes back upon them and fails to come up to expectations the practice of these virtues is just that much to the good, and we have at least not lived in the evil moment until it arrived.

What Do You Save?

A wealthy man, who died the other day, said that his one rule for financial success from the lowest rung of the ladder was to save 25 per cent of his wages. Some economists have been content to suggest that every individual budget should be so adjusted that one-tenth to one-fifth of the annual income be set aside for future emergencies. Whatever the ratio of saving may be—$1 in $4, $1 in $10 or some ratio between these limits—the essential is to have some fraction specifically determined on as the saving ratio—then stick to it through thick and thin.—Milwaukee Journal.

Imitate Nature.

Many a little flower is crushed beneath the foot of the wayfarer. Nature, rich and inexhaustible, replaces it a hundred—aye, a thousand—fold. Imitate nature. That is to say, do not stop to bemoan the first effort as wasted, but go on to produce something more. The one who refuses to be beaten must eventually be the victor.

Be Strong.

It is easy to quarrel. A weak man can do it if he can find some one to quarrel with, but it takes a strong man to return good for evil and even under strong provocation to endeavor to live peaceably with all men. Be a strong man.

HOPE ON, HOPE EVER.

Hope on, hope ever! Though today be dark,
The sweet sunburst may smile on thee tomorrow.
Though thou art lonely, there's an eye will mark
Thy loneliness and guerdon all thy sorrow
Though thou must toil 'mong cold and sordid men,
With none to echo back thy thought or love thee,
Cheer up, poor heart, thou dost not beat in vain,
For God is over all and heaven above thee—
Hope on, hope ever!

Hope on, hope ever! After darkest night
Comes, full of life, the laughing morning.
Hope on, hope ever! Springtime flushed with light
Aye crowns old Winter with her rich adorning.
Hope on, hope ever! Yet the time shall come
When man to man shall be a friend and brother
And this old world shall be a happy home,
And all earth's family love one another—
Hope on, hope ever!

CIVIL ENGINEER

Copyright by Fleming H. Revell Company

SYNOPSIS.

CHAPTER I—Bertram Meade is consulting engineer representing his father, the great Meade, who is the designer of the International bridge, the greatest cantilever structure the world has ever heard of. In the shadow of the uncompleted bridge young Meade receives Colonel Illingworth, president of the Martlet Bridge company, the constructors, and the colonel's daughter, Helen, whom he loves.

CHAPTER II—At dinner the possible weakness of the compression members of the bridge is talked of and Meade defends his father's calculations.

CHAPTER III.

Fall and Revelation.

"It's rather confused in here," said the man, "but we will soon get out toward the end and then the view is magnificent. You can see up and down the river for miles and the night boat will be along in a few minutes."

"Isn't that it?" asked the woman, pointing up the river to where a cluster of lights rounded a huge bend not far away, and swung out in midstream.

"Yes," said the man, "if we listen I think we can hear her."

They both stopped and, sure enough, faintly across the water came the noise of clanking paddles of the big river steamer. With that sound also mingled the song of the night wind, for a wonder comparatively gentle, making strange, weird harmonies as it sifted through the taut and rigid bars of steel. She listened enchanted with the sound.

The big floor beams extended from one side to the other of the bridge, between the trusses at intervals of fifty feet. At right angles to them and six feet apart, the stringers ran lengthways parallel to the trusses. Here and there pieces of timber falsework had been thrown across the stringers for the convenience of the workmen, but as these two slowly moved toward midstream at last these pieces became fewer, and finally there was nothing to be seen but the heavy floor beams and the lighter stringers.

After they passed the top of the pier and got beyond the small space of river bank on which the pier was set, there was nothing between them and the water, now moonlit and quivering, except these cross-girders of steel on either hand beyond the planking in the tracks.

"Have you a clear head?" asked the man. "I mean does it affect you to be on high elevations? Do you get dizzy?"

"I never have," was the answer, "but—"

"I think I'll hold you," was the reply.

He grasped her firmly by the arm. The loose wrap she was wearing over her shoulders did not cover her arms, and it was a bare arm that he took in his hand.

"I beg your pardon," he said quickly, "but—"

"It doesn't matter. I understand. You would better hold me, I might slip." There was something electric and compelling in the pressure of his strong hand upon the firm flesh of her round arm. She shrank closer to him, again unthinkingly, by a natural impulse.

The moon was now well clear of the brow of the highest hill. Its yellow was turning to silver and in its cold and beautiful illumination the whole river flowed bright beneath them. Every inch of the bridge was now clearly revealed in the white, passionless light.

Fifty feet away it ended in the air. They were now almost directly beneath the traveler, near the end of the suspended span. Its huge legs sprawled out like those of a gigantic animal on the extreme edges of the bridge on either side above their heads. The wooden platform on the track ran out half the distance to the bridge end. Slowly the two walked along it until but a few feet were left between them and the naked floor beams and the stringers carrying the ties to which the rails were bolted and the planks laid.

By the side of the track on the top of the stringers had been placed a pile of material surmounted by a large flat plate of steel, which lay level upon it. It was triangular in shape, the blunt point inward. The base which was about six feet wide paralleled the course of the river. The plate on the top of the pile was raised about three feet above the level of the track. They stopped abreast of it.

"Can't we go any further?" asked the girl in low tones, still close to the young man, who still lightly clasped her arm.

"I'm afraid it wouldn't be safe to go any farther," he said.

"I want to see the steamer. It will pass directly under the bridge."

"They have no business to pass under the bridge," said Meade. "They've been warned hundreds of times and orders have been issued. There is always danger that something might fall."

"Why can't I stand up there?"

"On that gusset plate?"

"Is that what you call it?"

"Yes, it bears the same relation to structural steel that a gusset does to a woman's dress."

"Exactly. But can't I stand on it?"

"Wait," he answered.

He climbed to the center of it, lifted himself up and down on his feet to test it, and found it solid apparently.

"I think so, but I shall have to put you up," he said at last as he lifted her up and set her down on her feet in the middle of the plate of steel.

"Oh, there comes the steamer," she cried. "I can see it beautifully from here."

"Be careful. You must not move. Stand perfectly steady. I am not so sure of that plate." He reached over from where he stood on the track below her and by her side and gathered the material of her dress in an iron grasp.

"I do not think that is necessary," she said. "This plate seems as solid as the rest of the bridge and—oh, there's the steamer! She's right under us."

The big river craft was filled with light and laughter. The wind fortunately blew the smoke away from the bridge so that they had a clear and perfect view of her. There was a band playing aboard her. They heard the music above the beat of the whirling paddles, the song of the rising wind. The passengers were congregated about the rails on the upper decks staring upward. The bridge was as fascinating to them as it was to the people ashore evidently.

"How interesting," said the delighted girl. "Why don't you come up here yourself, you can see so much better?"

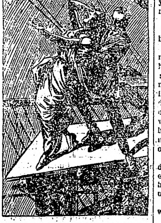
The man had dropped her gown, lifted his right foot to the pile on the stringers to follow her suggestion. Thoughtlessly she stepped toward the outer end to give him room, quite forgetful of his caution. Before he could complete his step or warn her of the danger, it now bent forward. It tilted distinctly. In spite of herself, Helen Illingworth was carried still farther forward as she sought to regain her balance. The piece of steel began to slip downward, grating on the pile of beams as it moved; another second and it would be off and on its way irrevocably.

Meade threw himself at the girl. He lunged out and caught her just as she was slipping downward with the plate now almost perpendicular. To catch her he had to step to the very edge of the planking beyond which the rails ran naked on the ties.

With a tremendous effort he caught her by the waist, swung her up and in, and stood fast on the brink quivering, heaving himself desperately backward as he sought to maintain his balance and take the backward step that meant safety.

A wild shout rose from the steamer as the huge plate dropped, like the blade of a mighty guillotine, straight down through the air. If it had struck the boat, it would have cut through like a knife. Fortunately it cleared the gangway by inches. In a second it had disappeared. Screams, shouts, arose from the boat which promptly sheered off into midstream.

Helen Illingworth's back had been toward Meade as he seized her. She had seen as he had everything that happened. Recovering himself at last, he stepped back slowly, almost dragging her, until they were a safe distance from the edge. His face was ghastly white in the moonlight. Sweat covered his forehead. He was shaking like a wind-blown leaf.



He Lunged Out and Caught Her.

"The whole world went black when I saw you go," he said slowly.

"Do you care that much?" asked the girl, trembling herself.

There was no necessity for maidenly reticence now.

"Care?" said the man. "Care?"

"I'm all right now."

"You are more fortunate than I. I stood to lose you, you stood to lose only life. Don't you see? Can't you understand?"

Suddenly he swept her to his breast as this time she faced him. She was very near him and she did not make the slightest resistance. She had waited for this hour and she was glad. They had faced death too nearly for any hesitation now. She knew he loved her, and knew that he had saved her at the imminent risk of his own life. There had been swift yet eternal moments when it seemed that both of them, trembling on the brink, would follow the downward rush of the gusset plate. Now as he strained her to him, she lifted her face to him, glad that she was tall enough for him to kiss her with so slight a bend of the head.

There, under the great trusses of steel, amid the huge, gaunt, massive evidences of the power of the might, of the mastery of man, two hearts spoke to each other in the silence, and told the story that was old before the first smelter had ever turned the first ore into the first bit of iron, before Tubal Cain ever smote the anvil; the story of love that began with creation, that will outlast all the iron in all the hills of the earth—that is as eternal as it is divine!

After that wild embrace, that first rapturous meeting of lips, he released her slightly, though he still held her closely and she was quite content.

"I'm quite calm now," he began, "that is, I am as composed as any man could be who is holding you in his arms. But if it had not been for me, you would never have been in danger. It was my fault. I should have made sure. I shall never forgive myself."

"But if I had not been in danger I might not now be here in your arms. And if I were not here," she went on swiftly, too happy in her love to be mindful of anything else, "I certainly would not be doing—this."

And of her own motion she kissed him in the moonlight.

"And if you were not doing this," said he, making the proper return, "I might not have had the courage to tell you."

"You haven't told me anything—in words," she answered, fain to hear from his lips what she well knew from the beating of his heart.

"It's not too late then to tell you that I love you, that I am yours. To give myself to you seems to be the highest possibility in life, if you will only take me."

"And do you love me more than the bridge?"

"More than all the bridges in the world, past, present and to come; more than anything or anybody. I tell you I never knew what love was or what life was until I saw you sliding to your death. If I had not succeeded I should have followed you."

"I felt that, too," she answered dreamily.

"We must go back, dearest," he said at last, "I am so fearful for you even now that I am almost unwilling to try it. Every time I glance down through these interspaces between the stringers my blood runs cold."

"You supported me before; I will support you now," laughed the woman, woman.

"No," said the man, "we will go together."

They turned toward the shore. He took her hand and slipped his other arm about her just as simply and naturally as if they had been any humble lover and his lass in the countryside. By and by they got to the end of the bridge. Far down the platform they could see the lights of the car.

"Listen," she said as they walked slowly along. "You must not tell father anything about this little accident."

"I obey, but why not?"

"It would only worry him, and it was my fault."

"No, mine."

"I will not hear you say it."

"But I must speak to your father about—"

"And the sooner the better; he is in good humor with you and the bridge now. I have heard him speak well of you. I believe he will be glad to give me to you."

"And if not?"

"I should hate to grieve my father, but—"

She turned and looked at him in the moonlight, her glorious golden head, her neck, her shoulders, her arms bare and beautiful in the celestial illumination. He seized her hand and lifted it to his lips as a devotee, and she understood the reason for the little touch of old-world formality and reserve, when nought but his will prevented him from taking her to his heart and making her lips, her eyes, her face, his own.

"Now may God deal with me as I deal with you," he said fervently, "if I ever fail at least to try with all my heart and soul and strength to measure up to your sweetness and light."

"My prayer for myself, too," she whispered.

"You need it not."

"You must wait here," she said, deeply touched, as they had now reached the steps of the car, "until I have changed my dress; father would notice—anybody would—that tear. When I have finished I will come back to you and then we will seek him and tell him."

Accordingly Meade stood obediently waiting outside the car in the shadow it cast. There was no one about. The servants had gone to bed. The porter of the car was nodding in his quarters, waiting for the time to turn out the lights. The engineer had the long platform all to himself. After a time he chose to walk quietly up and down, thinking. The future looked very fair to him.

"Bert," a sweet voice came to him out of the darkness. He turned to discover her standing in the door of the car dressed as she should have been for such an excursion had she at first followed her father's wise suggestion. His heart thrilled to the use of the familiar name. "Bert, I'm coming down to you."

Hand in hand they walked to the rear of the car, where the observation platform was still brightly lighted. Abbott had gone and the other three men were on their feet. They were about to separate for the night, although it was still rather early.

"Father," said his daughter out of the darkness.

"Oh, you're there," answered the colonel. "I wondered when you were coming back. I was just thinking of going to fetch you. Is Mr. Meade—?"

"I'm here, sir."

"Good night, gentlemen," said the colonel as the others turned away, leaving him alone on the platform. He came to the edge and leaned over the brass railing.

"Are you two going to make a night of it?" he asked jocosely.

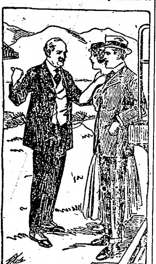
"Colonel Illingworth," began Meade.

"Father," said his daughter at the same time, "we have something to say to you."

Colonel Illingworth opened the gate, lifted the platform, and descended the steps.

"Here I am," he said as he stopped by the two.

His daughter took him by the arm and they walked down the platform so as to be out of any possible hearing from the car.



"When the Bridge Is Finished."

"Now," she said to Meade, who followed her.

His heart was beating almost as rapidly as it had on the bridge, and for exactly the same reason—fear of losing her. He tried to speak.

"Well, young man?" said Illingworth, flicking the ashes from his cigar and wishing to get it over, "you said you had something to say to me."

"It's a very hard thing to say, sir." He looked helplessly at the girl, but she was speechless. It was his task. If she were not worth asking for, she was not worth having, she might have said. "Well, sir," he began desperately, "I love your daughter, Helen. I want to marry her."

"Umph," said the colonel, "I supposed as much. How long have you and Helen known each other?"

"Over a year, sir, but I loved her from the very moment I saw her. I did not dare hope, I didn't dream, I never imagined, and strange as it may seem, sir, she—seems to love me."

"Of course I do," said Helen, realizing that it was now high time for her to come to the rescue of her lover, "and so would any other woman."

"You know, of course, that while I am not rich, I am not poor, and I can support my wife in every comfort, sir," urged the man, greatly relieved by the woman's prompt avowal.

"She'll need a few luxuries besides, I'm thinking."

"Yes, of course, sir, I'll see that she gets them. This bridge is going to make us all famous, and I shall have my father's influence and—"

"When the bridge is finished," said the colonel decisively, "come to me and you shall have my daughter."

"Oh, father, the bridge won't be finished for—" began the girl.

"I understand, sir," answered the engineer, too happy at her father's consent to make any difficulties over any reasonable conditions he might impose. "Yes, Helen, it's all right; your father is right. This job's got to be done before I—"

"Oh, don't say before you tackle another," protested the girl, half disappointed, and yet seeing the reasonableness of both men, while the colonel laughed grimly.

"That's about the size of it," said the old man, "no matter how you put it. One thing at a time. Meade, I don't know anybody on earth I would rather have for my son-in-law than a clean, honest, able American with a record like yours. A man who can look me in the eye and grasp me by the hand, like this."

He put out his hand as he spoke. Meade's own palm met it and the two men shook hands unemotionally but firmly, after the manner of the self-restrained, practical American, who is always fearful of a scene and does not wear his heart upon his sleeve. The colonel threw away his cigar, slipped his arm around his daughter's waist, kissed her softly on the forehead.

"I hate to lose you, Helen. I hate to give you up to anyone. We have been very happy together since your mother died, leaving you a little girl to me; but it had to come, I suppose, and perhaps I shall be glad in the end. Good night, Meade. You will be coming in presently, Helen?"

He turned and walked away as they answered him. They watched him go slowly with bended head. They watched him climb, rather heavily, up the steps to the car—that he was an old man seemed rather suddenly borne in upon them. He stood for a moment in the light, smiling, remembering, and then turned and marched within the car. He switched the light out as he passed down the corridor.

"Wasn't he splendid?" said Helen, when she had time to breathe and freedom to speak.

"One of the finest old men on earth. He and father would make a great team."

"I was interested in the bridge, before," said the woman, "but think how I shall watch it now. You must write me every day and tell me every inch that you have gained."

"Trust me, I'll measure it in millimeters."

"And now, sweet love, good night," she whispered. And she laughed as she looked back at him through the door.

CHAPTER IV.

The Deflection in the Member.

Three days after the departure of the Illingworth party the young engineer fell ill with follicular tonsilitis, which is about the meanest small thing that can lay a strong man low. He fretted over his enforced absence from the work and in the end had to pay for that very fretting, for he got up too soon and went out too quickly, and was promptly forced to bed again as a consequence of his impatience.

Now, after a week's confinement in his cabin, he felt strong enough to venture out again and to attack his problems. They were personal problems now, much more intimate than before, for he was building not only the bridge but weaving in its web of steel his own future happiness.

Of course he had been able to get out on the rough porch of his galvanized iron shack where he had the bridge in full view, and the day before he had even walked unsteadily down to the river bank, where he had been equally surprised and delighted at the progress that had been made. Abbott was a driver after his own heart. Really things seemed to have gone on just as well without him as if he had been on the job. He had not been lonely in his illness, for all of the chief men connected with the construction had done their best to beguile the tedium of his hours by visiting him whenever they could spare the time.

Abbott had been especially kind in his somewhat rough-and-ready way. The big construction superintendent was fond of Meade, although he undervalued him. He regarded him more as a theoretical than a practical man and the inevitable antagonism between the theorist and the practical man, when they are not combined in one personality, was latent in Abbott's heart. Nightly, he brought to Meade details of the progress of the work. That evening, just before leaving, he remarked in the most casual manner in the world, as if it were a matter of little or no importance, that C-10-R was a trifle out of line.

Now C-10-R was the biggest member of the great right-hand truss on the north side of the river. It consisted of four parallel composite webs each formed of several plates of steel riveted together. These webs were connected across their upper and lower edges by diagonal latticing made of steel angle bars. C-10-R and its parallel companion member, C-10-L, in the left-hand truss, carried the entire weight of the cantilever span to the shoe resting on the pier. These members were sixty feet long and five feet wide. The webs were over four feet deep and in size and responsibility the great struts were the most important of the whole structure.

To say that C-10-R was out of line meant that it had buckled, or bent, or was springing, and had departed from that rigid rectangularity and parallelism which was absolutely necessary to maintain the stability and immobility of the truss and the strength of the bridge. To the theorist nothing on earth could be more terribly portentous than such a statement, if it were true. To the practical man, who, to do him justice, had never dealt with such vast structures—and he was not singular in that because the bridge was unique on account of its size—the deflection noted meant little or nothing.

"Good God!" exclaimed Meade, aflame on the instant with anxious apprehension. The night was warm and he was dressed in his pajamas and had been lying on the bed. As if he had been shocked into action he sat up, forgetful of his weakness. "Deflection!" he fairly shouted at Abbott, who regarded him with half-amused astonishment, "a camber in C-10-R? Why didn't you tell me?"

By this time Meade had got his feet into his slippers and was standing erect.

"It isn't enough to make any difference," answered Abbott quickly, perhaps a little disdainfully.

"It makes all the difference on earth," cried Meade. "It means the ruin of the bridge."

He reached for his jacket, hanging at the foot of the bed, and dragged it on him.

"Don't worry about it, youngster," said Abbott rather contemptuously, although he meant to be soothing. "I'm going to jack it into line and—here," he cried as Meade bolted out of the door, "you'd better not excite yourself that way. Come back to bed, man, and—"

But Meade was out of the house. It was summer and the sun had set, but the long twilight of the high latitude still lingered. Before him rose the gigantic structure of the bridge. For all its airiness it looked as substantial as the Rock of Gibraltar, and it looked even more substantial if possible, as the man, seizing a lantern and, forgetting his weakness, ran down beneath the overarching steel to the pierhead, climbed up to the shoe, and crawled out on the lower chord as rapidly as he could.

Meade needed but one glance to see the deflection from the right line in the important member. For all his years of inexperience he was a better trained engineer than rough-and-ready Abbott. What appeared to the latter as a slight deflection, Meade saw in its true relation. There was a variation in the center of the member of an inch and a half at least, although unnoticeable to an untrained eye. It had all come in the last week. They had extended the suspended span far out beyond the edge of the cantilever and, with the heavy traveler at the end, the downward pressure on the great lower chord members had greatly increased.

It was a terribly heavy bridge at best. It had to be to sustain so long a span, the longest in the world. And the load, continuous and increasing, had brought about this, to the layman trifling, to the engineer mighty, bend. If it bent that way under that much of a load, what would it do when the whole great span was completed and it had to carry its transitory loads of traffic beside?

When two different views meet it is natural that age, experience, reputation and authority shall carry the day. Although Bertram Meade, Jr., had never been persuaded in all particulars of the soundness of his father's design, and could not be persuaded, that vast experience, that great reputation, that undoubted ability with its long record of brilliant achievement had at last silenced him. He had accepted through loyalty that which he could not accept in argument. Once accepted, he acted accordingly, heartily seconding and carrying out the wishes of the older and, as the world would say, the abler man.

The thing that smote the engineer hardest was that this weakness was exactly what he had foreseen and pointed out. It was the possibility of the inability of this great member to carry the stress that young Meade had deduced by using the formula of Schmidt-Chemnitz. It was this point, and this point particularly, that he had dwelt upon with his father and which they had argued to a finish. So strongly had he been impressed with the possible structural weakness of this member that he had put himself on record in writing to his father. The old man had overborne him and now the little curve, one and a half to one and three-quarter inches in sixty feet, established the accuracy of his unheeded contention. Vainly now he wished he had not let the old habit of affection and the little touch of awe with which he regarded his father persuade him against his reason.

He stopped, feeling suddenly ill, as a very nervous high-strung man may feel under the sudden and unexpected physical shock. He was weak still from the tonsilitis. He leaned against the diagonal at the end of C-10-R, clinging to it tightly to keep from falling. Abbott, who had followed more slowly, stopped by him, somewhat surprised, somewhat amused, more indignant than both.

"Abbott," said Meade fiercely as the erecting engineer joined him on the pierhead, "if you put another pound of load on that cantilever I will not be answerable for the consequences."

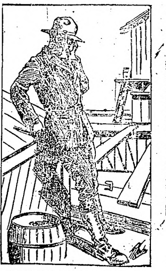
"What do you mean?"

"That deflection is nearly two inches deep now and every ounce or pound of added weight you put upon it will make it greater. Its limit will be reached mighty soon. If it collapses—" he threw up his hands—"the whole thing will go."

"Yes, if it collapses, that's true," said Abbott, "but it won't."

"You're mad," said Meade, taking unfortunately the wrong course with the older man.

"Why, boy," said Abbott, "that bridge will stand as long as creation. Look at it. That buckle doesn't amount to anything. It is only in one truss anyway. The corresponding member in the other truss is perfectly straight."



He Stopped, Feeling Suddenly Ill.

"Abbott, for God's sake, hear me," pleaded Meade in desperation. "Draw back the traveler and put no more men on the bridge. Stop work until we can [illegible] want to—"

Rural School Notes.

NURSE FOR THE RURAL SCHOOLS

Through the co-operation with the State Board of Health, the Pennington County Health Association has secured the service of a nurse for the rural schools. This movement was made possible by the selling of Red Cross seals last December. The rural schools are to be complimented for the interest taken and it is through their generosity in purchasing these stamps that this service is secured.

Miss Clara Henderson, R. N., will visit the rural schools in conjunction with the Co. Superintendent the coming weeks. To what extent this will be done will depend on the extent of the work incured in the various schools visited, the weather conditions, and lastly, on the funds available.

Teachers and school patrons will aid materially in the success of this the first initiatory movement by showing a receptive attitude, following the instructions given. This is a precarious time as the health conditions in our county are not good. Scarlet fever and other infections are threatening our schools. For these reasons a visiting nurse is now double welcome. Let us make the most of it in the protection of our homes.

EXAMINATIONS.

The State High School Board examinations will be held on March 22nd & 23rd. These examinations are now a part of the regular school plan and work of the county. Upon them depends the completion of the Course of Study for the rural schools.

The schools have pupils listed for examination will close for those days while the exams. are going on as school work and examinations cannot be carried on at the same time. There are about thirty eight examinations that have been requested in the various schools. As the county is limited to only twenty exams. it is obvious that some schools will be grouped together. Some teachers therefore, in order to take the exams. must go with their pupils to some adjoining school district and there jointly conduct the exams.

The teachers in the districts named below will conduct the exams. in the presence of the teachers if grouped as designated.

The schools in which examinations will be held are as follows--

Dist. 228, 57, 48 70 - Herbert Race, Teacher. Dist. 56, 47, 59, unorg 1 - Agnes Aubol, teacher. Dists. 2, 25, 219, 135 - Anna Rust, teacher. Dist. 149, 194, 166 - Erick Anderson, teacher. 64, 147, 127, - Mrs. Hilda Sande, teacher. Dist. 69, 180, 7, - Selma Silvarness, teacher. Dist, con. S. 8, and 28 - A. O. Halvorson, teacher. Dist. 66 and 44 - Hannah Halverson, teacher. Dist. 41, 81, 68, Unorg no. 2- Annie Haugen, teacher. Dist. 165 and 18 - T. R. Falls H. S. Dist. 102 - Prof. W. R. Wacks, principal. Dist. 6 and 154 - Stella Widness, teacher. Dist. 54 and 73 - Clara Linde, teacher. Dist. 10 - Ida Folkdahl, teacher. Dist. 94 - Clara Loberg, teacher. Dist. 99 - Nora Highberg, teacher. Dist. 29 - Anna Tandberg, teacher. Dist. 50 - Julia Griebrok, teacher. Dist. 133- A. O. Brevig. Dist. 125 39 and 35 - J. W. Erlandson, teacher.

Examination paper will be sent out from this office if requested in time, as to the amount needed to cover the want for the respective schools. Teachers should not fail to make this request in time. The graded and the consolidated schools are expected to furnish their own paper.

The sets of examination questions will be sent in time to each teacher designated to conduct an examination. The sets will contain a program, class lists, and rules for conducting the examination. Teachers will please study these rules carefully, particularly must the teacher conducting the exam. not fail to fill out and return the "Certificate" On back of the program noting exactly the time for each subject and the other items therein called for.

The pupils should be instructed how to fill out the "brief" on the examination paper when handed in. They should designate the place of examination by giving the number of the home district, not the name school. The teacher for such school must mark such paper in the left hand column of the class list; also to write address of pupil on said class list. I trust there will be class lists sufficient in number so that each school having pupils for examination can have them.

Teachers will mark and send in their papers to this office not later than March 27th.

There is an excellent chance for a county graduation exercise this year.

Respectfully submitted,
E. A. Mostue, Co. Supt.

Will Reduce Taxes.

St. Paul, Feb. 26.—Friday afternoon before a large audience in the house chamber, the tax committe held a public hearing on the bills introduced into the senate by Senator Richard Jones of Duluth, and several others, and into the house by Representative Indrehus and about a dozen more.

These bills materially reduce taxes on all farm crops, machinery, cattle and household goods; all merchandise and fixtures; all manufacturing material, machinery and finished products; and on all buildings, structures and improvements in and upon land including the value of clearing, drainage and fertilizing.

Former Governor John Lind made a very vigerous speech in favor of the general principal involved in these bills, and strongly urged legislation in this direction.

He showed how the present system penalizes the working farmer and encourages the speculator in farm lands: how the city business man and home owner are fined by taxation while the owner of vacant lots is encouraged by low taxation.

These bills, Governor Lind insisted, would releive the situation.

The entire hearing was very interesting, and Governor Lind rose to a high level of eloquence and earnestness when he declared that we must look at all such questions in the broad light of the general good.

"All will be benefited, some more than others, it is true," said Governor Lind, "but all who labor and produce; all who would build up and improve, all who are engaged in useful service, these will be benefited. Only the land monopolists will be injured, and they have no claim to consideration. They are employing no labor, but are preventing employment by holding lots and lands at a prohibitive price. They are producing no wealth, but are preventing others from producing.

"They are building no homes, opening no farms, starting no industries, but are hindering and preventing all these by forestalling the land and holding it out of use".

Mr. Armson and Mr. Lord of the Minnesota Tax Commission strongly favored the principal of the bills: but pointed out certain practical objections that in their opinion could easily be overcome.

Senator William A. Campbell of Minneapolis told the story of how he was fined by a tax of more than $60 per year because he built a bungalow; while the four vacant lots lying next to his home, that in summer were covered with weeds and unsightly rubbish and in winter were left with the sidewalk covered two feet deep with snow, were only taxed $10.00 each.

"Now isn't this a good way to encourage home-owning?" asked Senator Campbell.

Mr. Marwin of the committee urged the favorable consideration of the bills for the reason that they would employ labor and help the workingmen.

"A vacant lot employs no workmen, but when we force the owner to improve, he must hire workmen," said Mr. Marwin.

"Higher taxes on vacant lots will force them into use, set labor at work, increase the number of homes and raise the general level of prosperity."

Mr. Indrehus of the committee strongly favored the bills because, he said, they would make it easier for those who take up land in the country, fit it for permanent usefulness, and raise food for the people.

"No country can long endure whose rural population are renters," said he, "no country can long endure where landlordism flourishes. And the bulwark of landlordism is low taxes on land values and high taxes on industry."

As soon as a man gets everything he wants he finds that the things he has are not the things he wanted.—Chicago Herald.

It is said that a young man is formed at twenty-five, but it takes much longer than that to reform him.—Philadelphia Inquirer.

THE DAIRY

GIVE HERD BULL ATTENTION

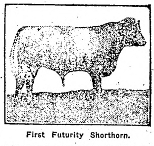
From Birth He Should Be Given Best of Care and Feed to Make Maximum Development.

(By W. W. SWETT, Missouri Agricultural College.)

It is a well known and very true saying that "the sire is half the herd," yet this important "half" seldom receives the attention he deserves.

From birth, the bull should be given the best of care and feed in order that he may make the maximum growth and development. He should receive plenty of skim milk and grain and be treated as well if not even better than the heifer calves.

At the age of five to six months he must be separated from the other calves. From this time on he must receive regular exercise and must be gently handled. When he is ten to twelve months of age he may be given light service—possibly one cow every three or four weeks. From the age of twelve to sixteen months this service may be increased to one cow per week.



First Futurity Shorthorn.

A satisfactory feed for a mature bull is alfalfa or clover hay and a grain mixture of corn, with oats or bran. A bull must have plenty of exercise. He does not need to be housed in a warm barn but is kept in the best condition when given a dry but open shed with a paddock attached so that he can go in or out at will.

Every mature bull should have a ring in his nose. There is some difference in opinion in regard to dehorning but it is always safer to handle a bull without horns.

DAIRY COWS RELISH SILAGE

In Feeding Test 17 Per Cent More Milk and 28 Per Cent More Butterfat Obtained.

Cows fed a ration composed largely of silage produced 17 per cent more milk and 28 per cent more butterfat than those given a ration consisting mainly of grain in a feeding test conducted for 121 days at the Ohio experiment station. The silage ration was also cheaper for milk production.

The cows gained nearly 8 per cent in milk yield when put on the silage ration. They produced butterfat at a cost of 13 cents a pound, while the cost of a pound from the cows fed mainly grain was 22 cents. There was little difference in the gains in live weight between the two lots.

In addition to 58 pounds of silage and 6.8 pounds of hay, the one lot received only four pounds of grain consisting of oilmeal and bran. The grain-fed lot received only 12 pounds of corn stover and hay but 13.5 pounds of a grain mixture of oilmeal, corn meal and bran.

ESTIMATED VALUE OF COWS

Total Yearly Product of $66.09 Given by New York College of Agriculture—Cost of Keep.

Estimates on the value of the average dairy cow's product in New York state, made by the college of agriculture, give a yearly total of $66.09. Costs of maintaining her are estimated at $61.85, not including the cost of labor. The difference, amounting to only $4.25 per cow, would give to the man who cared for 20 cows a yearly wage of $85, which is less than the lowest wage paid to ordinary farm labor.

SECURE BEST COW POSSIBLE

If One Cannot Get Good Animal, Then Take an Ordinary One—Get a Start Somehow.

Get a good dairy cow if possible. If one cannot get a good cow, then get an ordinary cow, one that is healthy, one that will breed, and then try to get her mated to a good bull. If one cannot buy a cow giving milk, then buy a heifer. If a heifer cannot be purchased, then buy a heifer calf. Get a start somehow.

The ELEVEN TOWNS

Entered at the postoffice at Goodridge, Minn. as second-class mail matter.

All this talk about following the flag and supporting the President goes pretty much after the same music as the well known song; "I don't know where I'm going, but I'm on my way". It is noticeable that those who sing this are generally on the way to bankruptcy, headache or an early grave.

The high cost of living is even hitting the garbage collectors in the large cities. Heretofore, part of their income has come from the sale of the garbage to rendering plants as soap material. They now find that so little meat stuffs and fats are thrown away that the soap manufacturers can not pay anything for the refuse. One can surmise from this that the poor must eat much spoiled food for the lack of means with which to buy fresh supplies. It is always the poor who get ground between the upper and nether mill stones.

During the past six months farmers of the Northwest have been greatly interested in Dr. Ladd's milling tests of the poor grades of wheat and many have hoped that in the adjussment of grades now going on by the federal government, these tests would be taken into consideration, In this they were badly mistaken. The man in charge of the federal grain grading was in perfect harmony with the powers that prey and listened to the arguments of the milling interests like an obedient servant should. The statements made by the farmors and independent millers were ignored. A few more bumps of that magnitude will awaken the good old party farmers to a realization that they have voted away their interest long enough. The "back of the country" will arise in its might and throw the yoke of party affiliation off its back and elect men of their own class, and let the political soft soaper stay at home.

We have written several editorials before relative to the importance of this village taking steps in support of the establishment of Judicial Ditch No. 39. Our location is not on a sandridge but rather in a slough hole and drainage is one of the crying needs. With the deepening and widening of Ditch No. 18 we would be given a fair outlet for the water from our streets, as well as for the water coming from the east. A ditch was dug from this village north to No 18 during the past summer, but the fall in that direction is very slight, and with a high stage of water in 18 it is a serious question if the ditch dug last summer will not serve to bring more water upon us than away from us. This would be remedied if 18 was made deeper and wider, which is the present plan if Judicial 39 is established.

There is considerable opposition to 39 in the town of North and also some in Silverton, and if nothing is done or said in favor of the ditch, it is likely to be turned down. A committee should be selected and sent down to Bemidji at the time of the hearing to present the proposition for our village. Get some men who are not afraid to talk both long and loud for that is what counts at hearings of that kind. We want this drainage and it is up to us to do something for it. If we sit back and hope that everything will turn out well, we will wake up to find out that we were left out in the final reckoning. We consider this of such public importance and we are not ashamed to call the attention of our readers to it even if it may be the seventh time.

GIRL, FOLLOWING FASHION, CHARGED WITH INSANITY

Kansas City.—"If all young women followed the dictates of fashion to the letter there would be few out of the asylum," was the way a sanity commission put it when it ordered the liberation of Margaret Waguer, seventeen years old, who was held on complaint of her mother. The latter thought the girl insane because, despite cold weather, she wore decollete gowns and short skirts. The daughter's defense was, "All the other girls dress that way."

Most Fatal Disease.

As regards the matter of mortality the race is close between the following diseases: Consumption, heart disease, pneumonia and the various diseases of the digestive organs, with the advantage slightly in favor of consumption or tuberculosis of the lungs. Bright's disease is latterly looming as a strong competitor with tuberculosis. — New York American.

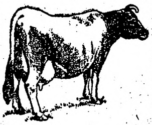
DAIRY FACTS

MILK FROM THE FAMILY COW

Animal Should Be Housed in Clean, Well-Lighted Shed and Provided With Yard for Exercise.

The family cow should be a constant source of cheap, pure and delicious milk, says Clemson agricultural college of South Carolina. Such may be the case, if a few precautions are taken. It is frequently observed, however, that under the conditions surrounding the family cow only dirty, diseased milk can be produced.

A cow may be suffering from tuberculosis, the worst disease to which she is subject, and still show no signs of it to the proud owner. For the sake of the children who drink this milk, a qualified veterinarian should be called upon to inspect and test each cow every year.



Fine Type of Jersey.

With the assurance of a healthy cow, she should be housed in a clean, well-lighted shed and provided with a clean yard in which to exercise. The milk should be drawn into a clean, small-topped milk pail and kept cool until consumed.

Milk sours and spoils because of the bacteria which enter it with dirt from the cow and from pails not thoroughly washed. Keeping these bacteria out of the milk and preventing their growth by keeping the milk cool, are easy and efficient means of procuring the best of milk from the family cow, provided she is free from disease.

COWS FOR MACHINE MILKING

Farmers Should Study Herd From Standpoint of Fitness—Avoid Defective Udders.

(By PROF. C. LARSEN, South Dakota State College.)

Dairy farmers who wish to use milking machines should study their herd from the standpoint of fitness for a milking machine. The reason why some men are successful with milking machines and others are not can be traced in part to the difference in cows.

When the milking machine is installed the owner will have better success if he will cull out the cows that do not readily and completely give down their milk, cows with uneven udder and placement of teats and cows with very fleshy teats. Some herds may not contain any defective cows, some may contain one or two and some herds may contain several.

Cows with such defective udders and teats should never be used as foundation cows. The heifer calves from the cows that milk easily by machine should be selected. It is especially important to select a herd bull that comes from ancestors that have well-formed mammary organs, and better still to select a proved herd bull that is known to produce daughters of large, symmetrical, and well-placed teats of good quality.

SUITABLE PLACE FOR COWS

Stalls Should Be Provided for Each Animal—Plenty of Ventilation Is Recommended.

To give best results milch cows should be provided with suitable quarters for feeding and milking. Stalls should be provided for each cow and feed boxes and manger racks should be so arranged that they will be of easy access for cleaning at least once every day. Twenty-five dollars, plus the labor, should fit any ordinary barn with stalls for five cows and the necessary feed boxes, mangers, and gutters. Plenty of ventilation is necessary, because the cow is somewhat like the human being, she thrives best where there is plenty of fresh air available. Provision should be made to take care of the manure. This can be done by providing plenty of bedding in box stalls, or, if stanchions are used, by having water-tight gutters about 14 inches wide and 10 inches deep running full length of the stable.

RELIEVE SCOURS IN CALVES

First Thing Is to Remove Cause, Then Give Limewater, Says Expert of North Dakota.

To relieve scours in calves, W. H. Peters, of the North Dakota station gives the following remedy:

The first thing is to remove the cause and then give them limewater in the milk. Two tablespoonfuls twice a day for a calf two months old and for larger calves half a cupful.

Make the limewater by putting a handful of lime into a pail of water. When it has slacked and settled pour off the clear portion and bottle it for future use.

GOOD AND EVIL.

The very best gifts, those that we should covet above all others if we understood their real value, are not those which may or may not chance to come to us, but those which must inevitably follow us when we are good and true, faithful and wise. The worst calamities are not those which may come upon us unawares, but those which follow from our own conscious wrongdoing.

Philadelphia school children, by contributing pennies, endowed a bed in a hospital for consumptives.

To Open a Pocketknife.

Opening pocketknives is often very hard on finger nails, and a stiff hinged penknife or jackknife is practically useless to a boy if he can't open it readily. Tear off a piece of newspaper or writing paper about three inches square. Fold it across once and then slip the crease under the blade of the knife. Grasp the paper firmly between the thumb and forefinger, as close to the blade as possible. Then pull steadily as if you were opening the knife without the paper. If you do not jerk it the paper will not tear. In this way you can open many a rusty blade that has been useless for months.—American Boy.

Forty-five per cent of American income is spent for food and 30 per cent for rent.

Machinery
This spring you will need tillage implements, harrows and cultivators.
Riding attachments and other special features can be furnished for all spring and peg tooth harrows. If you want the best your money will buy, come in and look over our stock.

AUCTION

I will sell at public auction to the highest bidder at my farmn in the Town of Reiner, 4 miles east and 2 miles north of Goodridge, on Section 7, near the School House Dist. No. 228-153.

Friday March 16th, 1917

Sale Commences at 10 O'clock A. M.

HORSES

One bay Horse
One Colt
One grey Horse
One bay Mare

CATTLE

One Cow, fresh May 1st.
One Cow, fresh now.
One Cow, was fresh in January
One Cow, fresh in April
One Cow, fresh in March
One Cow, fresh in June
One Cow, fresh
Two yearling Bulls
Four Calves
Twenty Chickens
One Cow, fresh now
One Cow, fresh now
One Cow, fresh in April
One Cow, fesh in April
One Cow, fresh in April
One Cow, fresh in June
Five Heifers, one year old
One Bull, two yearsold
All milk Cows and Calves are grain fed

MACHINERY

One Deering Binder, nearly new
One McCormick Mower
One three horse Steel Harrow
One LaCrosse Sulky Plow
One LaCrosse Brush Breaker, with riding attachment
One 14 inch Walking Plow
One Ottumwa Hay Stacker, new
One 5 inch burr Feed Mill, new
One side hill Plow
One narrow tire Wagon
One Hay Rack
One Road Cart
One Bobsleighs
One Ditch side pusher
One double seated Buggy
One Jumper
One Deering Mower
One Milwaukee Hay Rake
One Monitor Drill
One 12 inch Breaking Plow
One 1 horse Cultivator
One I. H. C. 3 wheel lever sweep Rake
One Gasoline Engine
One Bettendorf Steel Wagon
One double Wagon Box
One Single Buggy
One Economy King Cream Separator
One Stone Boat
One Lawn Mower

MISCELLANEOUS

Some Oak Lumber
Some oak logs
80 feet 4 inch well casing
Four farm Harnesses
One Hog and Sheep dipping tank, 8 bbl.
One self feed Coal Heater
One Kerosene Range
One Edison, $40.00 Phonagraph, 20 records
One Harmony Disc Phonagraph, 33 records
Two steel Beds, with mattresses, complete
Forty five Grain Sacks
About 12 tons excellent Hay
All other articles too numerous to mention.
300 Oak Posts, split
One Pump, with pipes, complete
One Pump Jack
Two single buggy Harnesses
One 2 bbl. Water Tank
One Cook Stove
One kerosene 55 bbl. steel Barrel
One Office Safe, 500 lbs.
All Household Goods
One Carpenters Work Bench
About 150 bushels Potatoes

Free Lunch at Noon **Free Cigars**

TERMS: All sums under $10 Cash. On sums over that amount bankable papers will be taken, due November 1st, 1917.

E. J. OLSEN, Owner

WIN YOUR SPURS.

Young men often talk of trusting to the spur of occasion. That trust is in vain. Occasions cannot make spurs. If you expect to wear spurs you must win them. If you wish to use them you must buckle them to your own heels before you go into the fight.—James A. Garfield.

SYNOPSIS.

CHAPTER I—Bertram Meade is consulting engineer representing his father, the great Meade, who is the designer of the International bridge, the greatest cantilever structure the world has ever heard of. In the shadow of the uncompleted bridge young Meade receives Colonel Illingworth, president of the Martlet Bridge company, the constructors, and the colonel's daughter, Helen, whom he loves.

CHAPTER II—At dinner the possible weakness of the compression members of the bridge is talked of and Meade defends his father's calculations.

CHAPTER III—Meade and Helen go out upon the bridge in the moonlight and Helen narrowly escapes a fall to the river below. Meade tells his love and they go to the colonel, who approves their marriage when the bridge is finished.

CHAPTER IV—Abbott, the construction engineer, tells Meade there is a deflection in member C-10-R, but makes light of it. Meade, after vainly trying to stop the work, wires his father and follows the telegram to New York.

CHAPTER IV—CONTINUED

"Don't talk to me, boy. I know my business. I tell you I can jack it back. That member's big enough and strong enough to hold up the world."

"What are you going to jack against?" Meade asked, and for the first time a little of Abbott's contempt appeared in the younger man's voice.

Abbott reflected that there was nothing firm enough to serve as a support for jacks and said rather grudgingly, for it seemed like a concession to the younger and junior engineer:

"Well, I can hook on to the opposite truss and pull it back with turnbuckles."

"That will damage the other truss too much, Abbott," Meade retorted promptly. "It isn't possible."

"Then I'll think up some other scheme," returned Abbott indifferently, as if humoring the other. "We can't wait; we've got to hurry it along. There's going to be no penalty against us on account of me. I won't stop work a minute," he explained patronizingly.

"There will be a bigger penalty if you don't do what I say, and paid in another way, in blood. And it will be your fault."

Now both men were angry and in their passion they confronted each other more resolute and fierce than ever.

"Look here," said Abbott, his fiery temper suddenly breaking from his control, "who are you anyway? You're only a kid engineer. Your father approved of the plan of this bridge. I guess we can afford to bank on his reputation rather than yours."

"Well, he doesn't know of this."

"Nobody is on the bridge now, and nobody is going to be on there until tomorrow morning. Wire him if you like. He'll wire Illingworth down at Martlet and we'll get word what to do."

"You won't put any men at work on the bridge until—"

"Not until tomorrow morning," said Abbott decisively, "if I don't hear from somebody at Martlet tomorrow morning the work goes on."

"But if my father wires you—"

"I take orders from the Martlet company and no one else," was the short answer with which Abbott turned away in finality, so that the other realized the interview was over.

Meade wasted no more pleas on Abbott. As ill luck would have it something had happened to the telephone and telegraph wires between the city and the camp. Meade dressed himself, got a handcar, and was hurried to the nearest town on the railroad's main line. From there he sent a telegram and tried to get connection with New York by telephone, but failed. Moved by a natural impulse, in default of other means of communication, he jumped on the midnight train for New York. He would go himself in person and attend to the grave affair. Nothing whatever could be so important.

There had been some friction between Abbott and Meade before on occasions, not serious, but several times Meade had ventured to suggest something which to Abbott seemed useless and unnecessary, and the fact that subsequent events had more often than not proved Meade's suggestions to be worth while, had not put Abbott in altogether the best mood toward his young colleague. Abbott never forgot that Meade had really no official connection with the building of the bridge and that he was only there as a special representative of his father, and although he could not help liking the younger man, Abbott would have been better pleased if he had been left alone.

Meade had not gone about it in the right way to move a man of Abbott's temperament. He realized that as he lay awake on the sleeper speeding to New York. Abbott was a man who could not be driven. He was a tremendous driver himself and naturally he could not take his own medicine. If Meade had received the announcement more quietly and if he had by some subtle suggestion put the idea of danger into Abbott's mind all would have been well, for when he was not blinded by prejudice, or his authority or his ability questioned, Abbott was a sensible man thoroughly to be depended upon. But the news had come to Meade with such suddenness, Abbott had only casually mentioned it at the close of a lengthy conversation regarding the progress of the work as if it were a matter of no special moment, that the sudden shock had thrown Meade off his balance.

Therefore he could see nothing but danger and the necessity for action. How he should handle his superior, or rather the bridge's superior, was the last thing in his mind. Aside from his natural pride in his father and in the bridge and his fear that lives would be lost if it failed, unless he could get the men withdrawn, there was the complication of his engagement to Helen Illingworth.

Meade could not close his eyes, he could not sleep a moment on the train. His mind was in a turmoil. Prayers that he would get to his father and the bridge people in time to stop work and prevent loss of life, schemes for taking up the deflection, strengthening the member, and completing the bridge, and fears that he would lose the woman, stayed with him through the night.

CHAPTER V.

The Death Message.

Meade, Sr., was an old man. Although unlike Moses his eye was dim and his natural force abated, the evidences of power were still apparent; especially to the observant. There rose the broad brow of the thinker. His power of intense concentration was expressed outwardly by a directness of gaze from the old eyes which, though faded, could flash on occasion. Other facial characteristics of that snow-crowned, leonine head, which bespoke that imaginative power without which a great engineer could not be in spite of all his scientific exactitudes, had not been cut out of his countenance by the pruning knife of time.

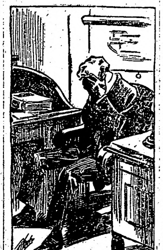
He was a great engineer and looked it, sitting alone in his office with the telegram crushed in his trembling hand, despite the fact that his gray face was the very picture of unwonted weakness, of impotency, and abiding horror. The message had struck him a terrific blow. He had reeled under it and had sunk down in the chair in a state of nervous collapse.

The telegram fairly burned the clammy palm of his hand. He would fain have dropped it yet he could not. Slowly he opened it once more. Ordinarily, powerful glasses stimulated his vision. He needed nothing to read it again. It is doubtful whether his eyes saw it or not and there was not need, for the message was burned into his brain.

He read again the mysterious words:

One and three-quarter-inch camber in C-10-R.

There could be no mistake. The name that was signed to it was the name of his son, the young engineer, the child of his father's old age. The boy, as the old man thought of him, had ventured to dispute his father's figures, to question his father's design, but the elder man had overborne him with his vast experience, his great authority, his extensive learning, his high reputation. And now the boy was right.



All He Could Think of Was the Impending Ruin.

Strange to say some little thrill of pride came to the old engineer at that moment.

He tried to find out from the telegram when it had been sent. That day was a holiday—the birthday of one of the worthies of the republic—in some of the United States, New York and Pennsylvania among them, and only by chance had he come down to the office that morning. The wire was dated the night before. And he recalled that the state from which the bridge ran did not observe that day as a holiday. They would be working on the International as usual unless—

One and three-quarter inches of deflection! No bridge that was ever made could stand with a bend like that in the principal member of its compression chord, much less so vast a structure as that which was to span the greatest of rivers and to bring nation into touch with nation. He ought to do something, but what was there to do? Presently, doubtless, his mind would clear. But on the instant all he could think of was the impending ruin.

The Uplift building, in which he had his offices, was mainly deserted on account of the holiday. The banks were closed and the offices and most of the shops and stores. It was very still in the hall and, therefore, he heard distinctly the door of the single elevator in service open with an unusual crash; then the sound of rapid footsteps along the corridor as of someone running. They stopped before the outer door of the suite which bore his name. Instantly he suspected a messenger of disaster. The door was opened, the office was crossed, a hand was on the inner door. He sank back almost as one dead waiting the shock, the blow.

"Father," exclaimed the newcomer, "You got my telegram?"

The other silently exhibited the crumpled paper in his hand.

"What have you done?"

"It's a holiday, don't you know? I only got it a few moments ago. The bridge?"

"Still stands."

"But for how long?"

"I can't say. The Martlet's resident engineer is mad. I begged, threatened, implored. I tried to get him to stop work, to take the men off the bridge, to withdraw the traveler, but he won't do it. Said you designed it, you knew, I was only a cub."

"But the camber?"

"He said, 'I'll jack it into line again.' Like every other engineer who sees a big thing before him it looks to him as if it would last forever. I tried to get you on the telephone here and at the house last night and failed. I wired you. Then I jumped on the midnight express and—"

"What is to be done?" asked the old man.

Meade, Sr., was thankful that the younger man had not said, "I told you so," as well he might. But really his father's condition was so pitiful that the son had not the heart.

"Telegraph the Martlet Bridge company at once," he answered.

"What shall we say?" asked the old man, uncertainly.

The young man shot a quick look at him, that question evidenced the violence of the shock. His father was old, broken, helpless, dependent, at last. . . .

"Give me the blank," he answered, "I'll wire in your name."

He repeated the telegram that he had sent to his father and added these words as he signed the old man's name to it:

Put no more load on the bridge. Withdraw men and traveler.

"I can't understand why we don't hear," said the young engineer two hours later, walking up and down the room in his agitation. "Two telegrams and now we can't get a telephone connection, or at least any answer after our repeated calls."

"It's a holiday there as well as here," said the older man. "There is no one in the office at Martlet."

"I'll try the telephone again. Someone may come in at any time."

He sat down at the desk, and after five minutes of feverish and excited waiting he finally did get the office of the Martlet Bridge company. By a happy fortune it appeared that someone happened to come into the office just at that moment.

"This is Meade," began the young man, "the consulting engineer of the International bridge. Well, at ten thirty this morning I sent a telegram to Colonel Illingworth and an hour later I sent another. What's that? Both telegrams are on the desk? Give me your name—Johnson—you're one of the clerks there? Well, telephone Colonel Illingworth at his home—what! He isn't at home? Is the vice president there—the superintendent—anybody? How far away are they? Twenty miles! There's no telephone? Now, listen, Johnson, this is what you must do. Get a car, the strongest and fastest you can rent and the boldest chauffeur, and a couple of men on horses too, and send up to that place wherever they are, and tell Colonel Illingworth that he must telephone me and come to his office at once. There are telegrams there that mean life or death and the safety of the bridge. You understand? Good. He says he'll do it, father. We've done all we can," he added. He hung up the receiver, sprang to his feet, looked at his watch. "It's so important that I'll go down there myself. I can catch the two o'clock train, and that will get me there in two hours. You stay quietly here in the office and wait until I get in touch with those people. I mean, I want to know where I can reach you instantly."

"I'll stay right here, my boy. Go, and God bless you."

As usual when in a great hurry there were unexpected delays and the clock on the tower above the big structural shop was striking five when a rickety station wagon, drawn by an exhausted horse, which had been driven unsparingly, drew up before the office door. Flinging the money at the driver, Meade sprang down from his seat and dashed up the steps. He threw open the door and confronted Johnson.

TO BE CONTINUED

PREFECT HOOTED FOR BOY'S ERROR

Lad Hoisted Italian Flag at Half Staff When Francis Joseph Died.

MISTAKE CAUSED A RIOT

All Sovereigns Looked Alike to the Governor's Little Servant; Got "In Bad."

Rome.—Strangely enough, there was a city in Italy where a flag was hoisted half staff on the prefect's residence as a sign of mourning for the death of Emperor Francis Joseph. This city was Ascoli Piceno in the Marches, where the prefect, or governor, is one of the most intelligent and patriotic officials in Italy, one who advocated Italy's war against Austria from the very beginning and sent his two sons to the front, where one of them was killed.

Obviously the prefect had no reason to regret the death of Italy's hereditary enemy, Francis Joseph, and yet his palace was the only building in Italy where a flag was hoisted half staff. The prefect risked losing his post, too, and it took him some time to justify himself and explain the mistake. Because, of course, it was all a mistake, and this is how it happened:

Early one morning a telegram reached the prefect from Rome with the news of the emperor of Austria's death. The telegram was given to the prefect's servant, or office boy, to file, and as office boys all the world over are generally very smart this particular office boy when he read the telegram came to the conclusion that it was his duty to put out the flag in sign of mourning.

Sovereigns Are Sovereigns.

It is true that we are at war with Austria, he explained to a fellow servant, but sovereigns are always sovereigns—in fact, they are each other's cousins—and when they die official mourning is indispensable. The fellow servant was not convinced and warned the smarter one to be careful. He suggested that before putting out the flag he had better ask the prefect. So the office boy knocked at the prefect's door and asked:

"Must we put the flag out at half staff for the emperor's death, sir?"

The prefect was busy at his desk, but when he heard the question he turned around and sternly looked at his office boy, ironically saying:

"Do you think that it is necessary to ask such a question?"

"All right, sir. Please excuse me for troubling you, sir," said the office boy, and he rushed out and told his friend: "You see I was right. The prefect said that it was not necessary to ask such a question." And within a few minutes the flag was out half staff and a crowd collected outside hooting and jeering at the prefect, whom they called "a dirty Austrian."

Naturally the flag was taken away, the prefect was furious, the smart office boy was kicked out and the government had to issue official statements explaining how the mistake occurred.

Cardinal as Censor.

Another incident in connection with Francis Joseph's death occurred in Rome, and in a way it is equally amusing. The editor of the Osservatore Romano, the official organ of the Holy See, was instructed by the cardinal secretary of state, Cardinal Gasparri, to write an article regretting in mild terms the death of the Catholic emperor. He was warned to be careful about the censor, and accordingly wrote the article emphasizing the deceased's religious faith and his attachment to the Holy See. Then he submitted the article to the censor, who passed it for publication.

Owing to the Vatican's neutrality of course it was only natural that the official organ of the Holy See should express regret at the death of a Catholic sovereign. The censor explained this to the editor, who was encouraged to ask whether there would be any objection if the paper came out with a black border, as was the custom on the death of a Catholic sovereign. The censor said there would be no objection, as he had nothing to do with the makeup of the paper, but only with what was printed in it, and he added: "You can have as wide a border as you please."

The editor rushed to the cardinal secretary of state with the proof sheets and informed him that the censor had not only passed the article but the black border as well. To his surprise Cardinal Gasparri insisted that the black border should be removed.

"We have to regret the emperor's death," he said, "but we are not bound to go to mourning for him as he was so bitterly hated in Italy that if the paper came out with a black border the people are bound to wreck your office."

The editor naturally obeyed and the Osservatore Romano was not in mourning for Francis Joseph. Everybody, of course, assumed that the black border had been censored by the censor, but the editor made the mistake to explain that it was Cardinal Gasparri, who censored it, with the result that the cardinal's popularity increased considerably, while in all probability Austria will protest that the Holy See's neutrality is not complete.

PRODUCT OF IMPROVED COW

Wild Animal Gave Only Enough Milk to Nourish Its Young—30,000 Pounds Yearly Now.

The wild cow gave only enough milk to support its young. Proof of what man has been able to do in improving dairy cattle is found in the fact that production is more than 30,000 pounds, the present world's record for milk per year.

CHIEF FACTOR IN CREAMERY

Much of Success or Failure Depends Upon Density of Cream—Thin Cause of Big Loss.

The density of the cream is one of the most important factors in the success or failure of a creamery.

Thin cream is chiefly responsible for the abnormal loss of butterfat and quality of butter and hence the low price paid the patrons for butterfat.

The Wind Claimed Her.

"And you haven't any cook?" said a woman living in the far West to her neighbor.

"No, I'm without a cook," was the reply.

"Why, what became of that excellent one you had?"

"Oh, during that cyclone the other day we lost her."

Gertrude and Bobbie Lonson spent Saturday night at the Edwin N. Olson home.

Mrs. H. Simonson was a visitor at the Robert Rupprecht home Saturday afternoon.

Preacher Threatens To Sue Editor.

Rev. O. F. Bostrom is threatening to bring suit against the editor of the Eleven Towns, for not paying, what, said minister claims to be due on his salary. which ye editor refuses to pay.

In the first place, we did not promise Mr. Bortrom a cent. Rev. Barackman of the Presbyterian church of Thief River Falls, came up here once or twice last summer and held English speaking services. He also informed the people that he would hold services here every other week providing enough money could be subscribed to warrant him coming up here. A list was circulated among the people of Goodridge and I signed my name to it promising 50 cents each Sunday, meaning that I would be willing to give 50 cents each Sunday that services were held here.

In the meantime, Rev. Bostrom came here, whether at the bid of Rev. Barackman, or the English speaking congregation, I do not know; I had no voice in the matter when he was hired, and still I was expected to shell out my hard earned cash to the support of a man I knew nothing about.

After he had been here about two months, the treasurer came around with a bill for four dollars for two months donation, equal to fifty cents every Sunday, whether Bostrom held services or not, I paid this bill, also another one which was presented me later, for which I was given credit to to the first of this year. During this time, Bostrom started up in the moving picture business at Grygla, to make a little easy money on the side, as the salary he got as preacher did not satisfy him, so he went into the movie business. It looked to me that it was the money he was after and not souls. I saw by donating towards his support that I was giving my hard cash to a man who was making easier and more money than I was myself, so I thought it was about time to quit. I bought no more of the matter until my attention was called to a few shady tricks he had put over on several people in town, and I decided right there and then, that I would quit donating to the salary of such a man, and I told the treasurer so the next time he came around to collect that I could not see my way clear to make any more donations to the preacher and gave him a few reasons why.

Since that time I heard nothing of the matter, until the reverend gentleman came into my office with a bill for preachers salary, and told me that I was the only man who had not paid up, which was a falsehood, as he had in his hand at that time a bill against P. P. Palmer, for the same amount, and I called him on it, and he informed me that Mr. Palmer had promised to pay him, which was another falsehood, as Mr. Palmer had promised him no such thing. I refused to pay him, what he claimed he had coming, with that he walked out out of my office, with the words on his lips, that he would sue me for it. He went out in such a hurry that he even forgot to thank the editor for publishing his church notices but then I suppose that this worthy gentleman must think that newspaper space does not cost anything and that a man must donate his work as well as money to the good of the cause.

Time and space will not premit me to go into the details, of the various tricks the reverend gentleman has pulled off around here, but if he so desires, I can give him a few of them in next week's paper. In the meantime I am patiently waiting for that law suit to come off.

The Editor

Called Home.

The death Angel has again called in our neighborhood, and took away to the "Great Beyond", Mrs. Gorthe Jacobson.

She was born in Norway the 22nd 1859, came to Litchfield, Minn. in 1884, and was united in marriage to Theo Jacobson, in 1885 In 1907, she with her husband came to Pennington County, and resided near Erie, until death, due to a long Illness with consumption, carried her quietly to the world beyond, at 12:15 P. M, Saturday March 10th.

She leaves to mourn their loss, two brothers and two sisters, her parents, husband and four children, who have the heartfelt sympathy of all, during their hour of sorrow.

Jerry Race and sons, of Reiner, were in town, Monday after a couple loads of lumber, for a new barn, which they will put up on his farm in the spring.

Village Election Returns.

At the Village election held here Tuesday evening there were even forty votes cast. There were two tickets in the field: One which was gotten at the caucus held last Friday evening, and the other one gotten out later headed the "Citizens Ticket". The Citizens ticket won out by a very close margin.

M. O. Seavey	10
Assessor:-	
Fred Peterson (on both tickets)	35

CLARA LEFT HIM $500,000

Janozt Rigo, gypsy violinist, was once the husband of the late Princess Chimay, who before her marriage to the Belgian nobleman was Clara Ward of Detroit. Her father left her many millions when he died. Rigo met the princess when she and the late king of Belgium with members of his staff were dining in a restaurant in Paris. Rigo played and after the performance kissed her hand. A few days later they eloped, dressed as gypsies. For 11 years the princess showered him with presents. Today he possesses caskets of jewels worth many thousands of dollars given him by her. The gypsy talks of nothing now but Clara Ward and her generosity to him, of her gifts and their romance. He declares she left him $500,000. He is now playing in a New York restaurant, and declares that when the war is over he will claim his fortune. The coat he is wearing in the picture was presented to him by the late King Leopold of Belgium.

THE PROPHET ELOPES AGAIN

Famous "Goosebone" Weather Man, Nearly Seventy, Decides to Wed Third Time.

Cape Girardeau, Mo.—Col. Matt Morrison, known all over the state of Missouri as the "goosebone weather prophet," is married. The prophet, according to his own statement, is "sixty some odd" years old, and Mrs. Amelia Green of Seventy-Six, Mo., is "around thirty-eight." The couple eloped.

"We just hustled out without anybody finding it out," said the prophet, "and went up to Ste. Genevieve, where we got the license and then got spliced. Then we went to a regular hotel, with steam heat, mind you, and it sizzled like the good old summer time.

"No, this isn't the first time I got married, but I have had my eye on this girl for about ten years. My first wife died, you know, and it cost me around about $1,000 to get away from the second. The third time's always a charm and we'll be just like two turtle doves."

The ELEVEN TOWNS
Entered at the postoffice at Goodridge, Minn., as second class mail matter.

The St. Paul Dispatch has discovered that Congress "has ceased to think in in national terms and has a tendency towards a spirit of narrow sectionalism." Wouldn't that jar you! How keen some editors are? Poor old Dispatch. Where has its editor been hibernating all this time? We dare ask, when did Congress ever think in national terms? Has it not been a matter of trading principles for some post office appropriation, river improvement, land grant, water right, or some such thing, ever since the government was organized. The measures of national importance which have passed upon their merits without some concessions to the grasping interests can be counted on the fingers of one hand. Mr. Editor of the Dispatch, wake up and learn something.

We cannot refrain from saying a good word for Moses E. Clapp, who has just concluded a term in Congress as Senator from Minnesota. He has been affiliated with the progressive element of this body and done what he could to correct existing abuses. One can truthfully say that he has been right, at least part of the time, which is more than we care to acknowledge with regard to his colleague. It is a distinct loss to the people of Minnesota to be deprived of his services. During his term of office we could at least feel that he would some what offset the wrongs of our other Senator. Such will not be the case in the future. We now have a team which will pull perfectly in double harness for United States Steel, Standard Oil and other vested interests. A plutocrat and an autocrat are now looking after the interests of Minnesota producers in the United States Senate. One need but glance at the daily papers to learn with what satisfaction it is announced that Mr. Kellog is right with Big Business, if we had not already come to the same conclusion from the amount of money spent to elect him. It was a rich man's campaign, and it will be rich men's representative.

We understand that the Comet Publishing Company of Thief River Falls is having trouble to get by with its scheme to secure a circulation. The Post Office Department has given notice that the thing looks fraudelent. From what we have seen, it looked the same to us. A reputable concern does not do business in that manner. To the ignorant the scheme sounded great, but it was not new in any way. Similar propositions have been floating around for the past three centuries. It reminds us of the story of a snow ball that started down a mountain. It gathers volume and momentum as it rolls, and pretty soon it breaks down everything in its path and no one is able to stop it. The promoters are liable to find themselver picked up by this snowball and hurled against the granite wall when the snowball hits the foot of the mountain. We are sorry for the men who have been figuring on the thousands of dollars that would jingle in their pocket from this scheme, but we would advise our readers to have nothing to do with it.

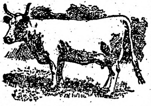
DAIRY

BALANCED RATION FOR COWS

Feeding Should Be Governed by Animal's Capacity to Produce Milk—Good Rules for Winter.

The feeding of the dairy cow should be governed by the cow's capacity to produce milk. By keeping a daily record of each cow's production, the skillful feeder soon finds that some cows in the herd respond to an increased allowance of feed and return a good profit on it, while others are limited in milk capacity and overfeeding them is unprofitable. Profitable feeding requires a thorough knowledge of the individual cows as well as of the values of feeds.

The following general rules will be found invaluable as a guide for winter feeding by the inexperienced feeder:



Mature Ayrshire Cow With Record of 11,708 Pounds of Milk and 536 Pounds of Butter.

1. Under most circumstances the cow should be fed all the roughage that she will eat up clean, adjusting the grain ration to the milk production. Only when the cow tends to become overfat should the quantity of roughage be restricted.

2. A grain mixture should be fed in the proportion of 1 pound to each 3 pints or pounds of milk produced by the cow, except in the case of the cow producing a flow of 40 pounds or more, when the ration can be 1 pound to each 3½ or 4 pounds of milk. An even better rule is 1 pound of grain each day for every pound of butterfat produced by the cow during the week.

3. Feed all the cow will respond to in milk production. When she begins to put on flesh, cut down the grain.

TREAT CALVES TWICE YEARLY

Don't Wait Until Animals Commence to Die of Blackleg Before Administering Treatment.

(By G. H. GLOVER, Colorado Agricultural College, Fort Collins.)

Calves should be vaccinated for blackleg twice a year, making it a regular chore, and do not wait until they begin to die before getting ready.

The period of ordinary susceptibility ranges from three months to two and one-half years. Most of the vaccine on the market is reliable and the unsatisfactory results are usually due to carelessness on the part of the farmer in not following directions in using it.

The agricultural college distributes the government blackleg vaccine free to farmers of Colorado. Orders for vaccine will not be filled promptly, however, unless the applicant states that he has a vaccinating outfit, which is very necessary to administer vaccine in this form. A pellet injector will not do, neither will a hypodermic syringe, without the remainder of the outfit, for placing the vaccine in solution.

HIGHER QUALITY OF BUTTER

Article Made by Farmer Should Top the Market—Creamery Has Little Control of Cream.

There is no reason in the world why the farmer cannot make butter of higher quality than that made at the creamery, according to N. E. Olson, instructor in dairy husbandry in the Kansas sate agricultural college.

"The farmer can keep his cream in excellent condition," says Mr. Olson, "while the creamery man has little control over the cream he buys—hence the farmers' butter should top the market.

"The first step in the making of good butter is the production of clean milk. If milk contains no putrefactive and gas-forming bacteria, butter can be produced which will be free from odors and which will not putrefy, if proper precautions are taken with the cream and with the butter after it is churned and packed."

PUREBRED BULL IS FAVORED

Keystone of Herd Improvement Is in Swatting Scrub Sires—Specialization Is Basis.

The keystone of herd improvement is in swatting the scrub and using a purebred sire. The bull is more than half the herd, for with good judgment in mating and culling, all his progeny will "take after father" in a few generations.

The purebred makes better gains for the amount of feed consumed because it has been developed along lines of specialization. Specialization is the basis of profit in every industry. The more highly specialized a machine or an animal, the more efficient it is and the easier it meets competition—and success rests upon the ability to compete.

The Tongue and Typhus.

According to P. Remlinger, quoted in the Journal of the American Medical association, an infallible method of telling whether a patient has typhoid (or paratyphoid) or the much more serious typhus is to ask him to put out his tongue. The typhoid or paratyphoid patient does it without effort, but if he has typhus he cannot get it beyond his teeth.

Aping His Sire.

"Papa," said five-year-old Tommy, "please give me 5 cents to buy a toy monkey."

"You don't need a toy monkey," answered the father. "You are a monkey yourself."

"Well," continued the little fellow, "give me 5 cents to buy peanuts for the monkey."—Christian Herald.

DO YOUR BEST.

The main thing is to keep on doing our very best all the time. Even although at times we may feel discouraged and hopeless, we must never give in. If you do your best your conscience is clear.

A Bluff.

"Are you sure de lady in dat house cooks wit an oil stove?" asked Plodding Pete.

"Positive," replied Meandering Mike.

"And she has a pump right in de kitchen?"

"Yes."

"G'wan up an' ask her if she don't want us to chop some wood or carry some water."—Washington Star.

Law Against Cricket.

Until a century and a half ago England's great national pastime figured in the statute books as a crime. The game was declared illegal in the time of Edward IV., owing to its having become so popular as to interfere with archery, the then sport of kings. The law against it was vigorously enforced, and every person convicted of playing the game was fined £10 or sent to prison. It was not until the formation of the famous Hambledon club in 1749 that the statute was repealed.—Pall Mall Gazette.

The Charm Worked.

"The ancients treated diseases with charms and trinkets."

"Why not?"

"Can there be any medical virtue in such?"

"I've known a new bracelet to get my wife quickly over what appeared to be a very sick spell."—Kansas City Journal.

Conferring a Title.

While he was governor of Kentucky Proctor Knott sent to the Hon. Stoddart Johnston a certificate, officially signed and bearing the impress of the great seal of the state, duly commissioning him as "Mister," which he said was a distinctive and honorable title that no Kentuckian had ever previously borne.

Tiberius at his death left $118,125,000, which Caligula spent in less than ten months.

HOME TOWN HELPS

RECOGNIZE VALUE OF BEAUTY

Los Angeles County Property Owners Wise in Planting Flowers on Borders of Roads.

"Los Angeles county, California, is the American Riviera, and in no way is the visitor more reminded of the beauty of the famous Mediterranean playground than in the treatment of the roadsides," says the American Highway association. "There is one broad boulevard where, for 18 miles one travels between continuous rose bowers backed with palms or firs. About fifty thousand rose bushes of fifty varieties were used in this landscape gardening.

"In many places the roads wind through orange, lemon and walnut groves separated from the roadway by masses of rose bushes four to six feet high, which charm the eye and fill the air with fragrance even in December.

"The work was done by individuals, but it was so successful that about two years ago a committee was organized to carry on such roadside treatment on a larger scale and in accordance with comprehensive plans. Funds were raised by a direct tax, and the county forestry department was placed in charge of the execution of the project.

"About two hundred miles of road now have 90 road trellises to the mile of highway. Each trellis is 20 feet long, five feet high and supports five bushes. Fifty varieties of roses are used, and give an attractive combination of colors. In addition, poppies, petunias and geraniums, which grow luxuriantly in that climate, have also been used along the boulevards, and palms and eucalyptus trees have been set out where necessary to break flat monotony or furnish a background."

HAVE HOUSE PROPERLY BUILT

Duty Man Owes to His Neighbors and to the City in Which He Plans to Reside.

Any house, whether it have three rooms or twenty, is a fascinating study. It is as full of possibilities as the owner himself, and, like him its character is sometimes fully developed, sometimes not. But even an old, a stuffy house, one that has been as long "for let" as a man's conscience, may be improved! Here a window may be thrown out to admit light or to include a view, there a wing may be added and a dull dwelling transformed into one full of delightful surprises. A properly built house adds greatly to the appearance of the street on which it is built.

"The most fascinating house I ever knew," said an architect recently, "had originally but four rooms, to which every five or six years a new wing was added, the net result being a long, rambling, bow-windowed structure, which one never left without regret, and to which friends came homing as to a dovecote."

Concealed Will in Book.

A remarkable story concerning the discovery of a will was recently made known. Dr. Peter Quin Keegan, an elderly Irishman, and an LL.D. of Dublin university, was keenly interested in botany. A short time before his death he met Mr. Ronald Ellwood, traveler for a Penrith firm, and a friendship sprang up, based on their botanical studies. Doctor Keegan gave him a book on the subject, but Mr. Ellwood had no occasion to refer to it until a few days ago. He then found that two of the pages were fastened together, and outside one of them was an instruction in Doctor Keegan's peculiar writing that the pages were not to be opened until after his death. Doctor Keegan being already dead, Mr. Ellwood opened the pages and found between them the old gentleman's will.

Will Build Russian Canal.

The project for the construction and equipment of a Volga-Don canal, as designed by the Russian minister of ways and communications, has been approved by the government. The projected canal will play an important part in the economic development of southeastern Russia and of the Volga and Don basins. Grain from Tsaritsin and timber and ore from the Urals will thereby obtain a direct outlet to the ports of the Sea of Azof and thence to the Black sea. Moreover, the canal will make it possible to supply coal to all the chief cities and industrial centers of the Volga and surrounding country from the rich coal district of the Donetz basin.

Planting Trees in Streets.

J. H. Reed says of street planting: "Proceed with caution, but proceed. It is too little appreciated that results from ornamental-tree planting, or its neglect, are to continue indefinitely. In the generations to come tree-lovers will be praising the good taste and good judgment of the planters and caretakers before them, or will be criticizing the injudicious work, or the entire absence of what should then have been done."

Plant Vines.

Home grounds whether in the country or city, are incomplete without vines.

WAR TAKES MOST OF COPPER OUTPUT

At Opening of Hostilities Industry Used Nine-Tenths of That Produced.

1916 YIELDS 950,000 TONS

United States Now Able to Mine 2,400,000,000 Pounds a Year—Curtailment Feared After the War Ends.

New York.—Authorities on the copper trade estimate that approximately 75 per cent of the world's present production is being used for war purposes, the remaining 25 per cent going into commercial consumptive channels as before the war began. At the outbreak of hostilities, it is estimated no more than 10 per cent of the copper produced by all the countries with deposits of the metal went into the manufacture of war material. The peaceful trades used up 90 per cent, and this proportion existed for several years before the upheaval in Europe.

These are significant figures, particularly as regards the market for copper after the war ends. The United States produced copper in the autumn months at the annual rate of 2,400,000,000 pounds, compared with about 1,000,000,000 turned out in all of 1916. In July, 1914, the mines and refineries of the country were turning out the metal at the rate of 1,700,000,000 pounds yearly. From the beginning of the war to the present time, then, production has been increased 700,000,000 pounds. This increase alone is greater than the entire production of the rest of the world at the present rate of output.

With talk of peace in the air, it is natural that copper producers and consumers alike should devote a great deal of thought to what may come when the treaty of peace is signed. With three-quarters of all the metal of the world going into munitions, it is plain enough that a tremendous alteration of market and consumption plans will come with peace. It is only natural to assume that prices will reflect substantially the change of conditions, but copper men are not persuaded that there will be anything like a slump. There will also be need for a drastic curtailment of production unless peace demands should suddenly expand to a level offsetting the war demand, which experts in the trade hardly expect.

Next Six Months' Output Sold.

The sellers of copper say they are quite comfortable about conditions for the first half of this year. They have reason to be so, for practically all the expected output has been sold, and sold on "firm" contracts—that is, contracts which call for delivery and payment whatever may be the conditions marketwise. If the war lasts beyond July 1, the copper companies maintain, business must continue good for the allied governments have to come to the United States for their supplies if they are to be adequate to the demands of the armies. It is clear, therefore, that the duration of the conflict is the vital factor in the copper trade, not only as regards consumption this year, but a part of next year as well.

Copper prices after the war, in the opinion of a leading seller, will not be governed solely by the law of supply and demand as hinged on war operations. They will be affected substantially by the attitude of the American producer toward foreign buyers who come seeking the metal for commercial uses. It is estimated that Germany, Austria, Turkey and Serbia are producing copper at the rate of 100,000,000 pounds a year, all of which, and more, is going into the war machine. Such reports on conditions in the central powers as are available show that these nations have raked and scraped the countries over for all copper implements, which means that in the end vast replacements will need to be made of these supplies. The copper cooking utensils for 100 years or more; roofs of churches and dwelling houses; electrical implements and railroad and telegraph supplies have been thrown into the melting pot. In 1913 Germany and Austria imported from this country 500,000,000 pounds of copper, and while a part of this probably went into war reserves, much of the metal was bought for manufacturing purposes.

Curtailment of Buying Expected.

These factors of reduced supplies and the known movement of copper into the central powers in times of peace lead up to the part which American producers will need to play. A great deal of the replacements, doubtless, will have to be made in these and other European countries, whatever may be the cost. But it stands to reason, as copper men see it, that high prices and diffident selling methods will tend to curtail buying, especially if the nations of Europe have financial difficulties to solve. American copper interests are aware that committees have been organized in several countries of Europe to devise ways and means of caring for their needs on an economical basis after the war. These organizations, with government co-operation, obviously are laying plans to buy their metal at prices favorable to themselves or to restrain buying if prices are not suitable.

With the thought in mind that gov [illegible] purchases, it is plain why prominent copper men have lately gone on record with predictions that 30-cent metal will go by the board when the war ends. If production is to be maintained at a high level, prices will be called upon to bear the brunt of the post-war reaction. There are producers who feel that the American output will sag back within a year or two after the conflict is over to where it was in 1913; others are persuaded that it will not again fall so far unless something happens to injure business all over the world. There are producers who look forward to 15-cen copper after the war demand has bee cleared away, while others think tha quotations will not drop under 2 cents. A great deal as regards both production and prices, it is said in th trade, depends upon legislation, whic will permit American exporters to co operate in sales abroad.

1916 Prices Break All Records.

The average price of copper in 19 was 27.202 cents a pound, according the records of the Engineering an Mining Journal, compared with 17.2 cents the year before. Decemb brought the highest average for a month, with a price of 31.890 cen while in November the average qu tation was 30.625 cents. The pric of 1916 were never approached in a other year in the history of the indu try.

Spelter was sold at an average qu tation of 12.804 cents a pound, agai 13.232 cents in 1915, a slump in t middle of the year working to ke the average under that of the prec ing 12 months. Lead, on the oth hand, sold at 6.058 cents, compar with 4.673 cents in 1915 and in I cember the average price for t month was 7.50 cents.

MAY ADD CUBIT TO STATUR

Berkeley Scientists Discover S stance at Base of Brain to Make People Grow.

Berkeley, Cal.—Scientists at t University of California have disc ered the substance that produ growth in the human body, it was a nounced. Tethelin is what they c it. It is in the pituitary body at t base of the brain, and by retarding accelerating its functions it may possible, according to the Berke scientists, to control the stature of h man beings.

Announcement of the discovery w made by Dr. T. B. Robertson, prof sor of biochemistry, who said that had succeeded in isolating tethelin a that he believed it was the first ti in the history of biological science th it had been done.

Doctor Robertson said his expe ments covered a period of four yea He said the ultimate importance of t discovery made by him and his as ciates could not be estimated at th time.

SALE OF CIDER IS STOPP

Nice Discrimination Needed to T Whether It Is a "Wet" or "Dry" Drink.

Wooster, O.—"Sweet" cider is ba in Wooster following a visit to t city representatives of the state liq license commission. The men sa pled the offerings of local restaura which have been selling cider at cents a glass.

Then they conferred with the c police authorities and the dealers w requested to discontinue the sale cider to "avoid complications."

No charges were made that the ci had accumulated more than its allo ance of alcohol, although it is said be more in demand when a nice d crimination is required to tell wheth it is a wet or dry town drink.

CHINESE BY TUNNEL LAWFU

Novel Defense Is Offered by Tw Smugglers in District Federal Court.

Kansas City, Mo.—A novel defense was offered in the federal court in Kansas City, Kan., by Lorne Stoneberg and Edward Hook, who filed habeas corpus proceedings to obtain their release from the federal penitentiary, where they were sent on a charge of bringing a Chinese into the United States.

To evade the federal statute, which says Chinese must not be brought into the country "by land or by water," they brought Mah Chong, alias Mah Gwon Wy, through a tunnel under the Detroit river, to Detroit, from Windsor, Can. After hearing this defense, Judge Pollock took the matter under advisement.

The men were fined $1,000 each and sentenced to two years in prison, in Chicago last July.

LIVES WITH BRAIN EXPOSED

Top of Head Blown Off by Shotgun, Bernard Archer, May Yet Recover Health.

McKittrick, Wis.—Bernard Archer, of this city, is still living, after part of his skull was blown away by the discharge of his shotgun. The movement of his brain can plainly be seen.

Archer was returning from a clay-bird shooting event when a rabbit ran across the road in front of him. In going through the brush his gun was knocked from his hand and was discharged as it struck the ground. He was still able to walk into town after the accident and has never been unconscious.

DAIRY FACTS

TO OBTAIN HEALTHFUL MILK

Cows, Barns and Yards Must Be Kept Clean—Small Top Pails Keep Out Foreign Matter.

(By V. R. JONES, Dairy Husbandry Department, South Dakota State College.)

Cows must be healthy and kept clean.

Barns should be kept clean, well lighted and ventilated.

The barnyard should be kept clean and properly drained.

Utensils should be thoroughly washed and scalded or steamed and kept in a clean room.

Cows should be fed good wholesome food and pure water.

Milkers and attendants who come in contact with the milk should be healthy and clean.

Cows should not be fed at milking time or immediately before. Dust from feed falls into the milk and contaminates it with germs.

Wipe the udder and side of cow with a damp cloth and milk with clean, dry hand.

Use small-topped milking pail. This helps to keep foreign matter from the milk.

Remove the milk immediately after milking to a separate room from the barn to be strained and cooled. Cool milk to as low a temperature as possible without freezing. Forty or fifty degrees F. retards growth of most germs, and particularly those that cause milk to sour quickly.

BREAKS A RIB SNEEZING

Mrs. Arthur Heiser Carelessly Twisted Her Body to Avoid Fall, Then Felt Pain.

Mount Carmel, Pa.—A sneeze, a twist of the body—result, a broken rib, according to the experience of Mrs. Arthur Heiser, thirty-five, of Shamokin Dam.

She was emerging from a department store when she sneezed violently, and in an effort to save herself from falling off the steps of the store, twisted her body. She saved herself from falling, but was immediately bothered with a severe pain which sent her scurrying to the doctor. There she discovered she had fractured a rib.

The Wind Claimed Her.

"And you haven't any cook?" said a woman living in the far West to her neighbor.

"No, I'm without a cook," was the reply.

"Why, what became of that excellent one you had?"

"Oh, during that cyclone the other day we lost her."

SYNOPSIS.

CHAPTER I—Bertram Meade is consulting engineer representing his father, the great Meade, who is the designer of the International bridge, the greatest cantilever structure the world has ever heard of. In the shadow of the uncompleted bridge young Meade receives Colonel Illingworth, president of the Martlet Bridge company, the constructors, and the colonel's daughter, Helen, whom he loves.

CHAPTER II—At dinner the possible weakness of the compression members of the bridge is talked of and Meade defends his father's calculations.

CHAPTER III—Meade and Helen go out upon the bridge in the moonlight and Helen narrowly escapes a fall to the river below. Meade tells his love and they go to the colonel, who approves their marriage when the bridge is finished.

CHAPTER IV—Abbott, the construction engineer, tells Meade there is a deflection in member C-10-R, but makes light of it. Meade, after vainly trying to stop the work, wires his father and follows the telegram to New York.

CHAPTER V—At the great engineer's office father and son try to prevent disaster, but young Meade only reaches Colonel Illingworth as a message comes that the bridge, with 150 men, is in the river.

CHAPTER VI—Abbott goes on with the work, ignoring Meade's protests, but while uneasily inspecting C-10-R the lacings snap under his eyes and he goes into eternity with the other men on the falling bridge.

"Did you get him?" he cried.

"He isn't here yet. I sent an automobile and two men on horseback and—"

The next minute the faint note of an automobile horn sounded far down the valley.

"I hope to God that is he," cried the young engineer, running to the window.

"That's the car I sent," said Johnson, peering over his shoulder. "And there are people in it. It's coming this way."

"Johnson," said Meade, "you have acted well in this crisis and I will see that the Bridge company remembers it."

"Would you mind telling me what the matter is, Mr. Meade?"

"Matter! The International—"

"Bert," exclaimed a joyous voice, as Helen Illingworth, smiling in delighted surprise, stepped through the open door and stood expectant with outstretched hands.

Young Johnson was as discreet as he was prompt and ready. He walked to the window out of which he stared, with his back ostentatiously turned toward them. After a quick glance at the other man, Meade swept the girl to his heart and held her there a moment. He did not kiss her before he released her. The woman's passionate look at him was caress enough and his own adoring glance fairly enveloped her with emotion. Johnson coughed and turned as the two separated. It was the woman who recovered her poise quicker.

"What were you saying about our bridge when I came into the room?" she began, and Meade fully understood the slight but unmistakable emphasis in the pronoun—our bridge, indeed—"I was lying down this afternoon, but when I awakened my maid told me about your urgent calls for father," she ran on, realizing that some trouble portended and seeking to help her lover by giving him time. "I knew something must be wrong, so I came here. I didn't expect to see you. Oh, what is it?" she broke off, suddenly realizing from the mental strain in her lover's face, which the sudden sight of her had caused him to conceal for a moment, that something terribly serious had happened, and she turned a little pale herself as she asked the question, not dreaming what the answer would be.

"Helen," said the young man, stepping toward her and taking her hands again, "we're in awful trouble."

"If it is any trouble I can share, Bert," said the girl, flashing at him a look which set his pulses bounding—at least she was to be depended on—"you know you can count on me."

"I know I can," he exclaimed gratefully.

"Now tell me."

"The International bridge is about to fall."

The color came to her face again. Was that all? came into her mind. That was serious enough, of course, but it would not matter in the long run. Helen realized the awful gravity, the terrible seriousness, of the situation of course. The bridge meant much to her even if in quite a different way. It was there he had saved her from the awful fall. It was there that he had told her that he loved her. The bridge might fall, but it was as eternal as her affection in her memory. Their engagement, or their marriage, had been made dependent upon the successful completion of the bridge. What of that? The proviso meant nothing to her when she looked at the white-faced agonized man to whom she had given herself.

Into the Room Burst Colonel Illington.

"It is terrible, of course," she said quietly. "But you can do nothing?"

"If I could, do you think I'd let the bridge, and you, go without—"

"I'm not going with the bridge," was her quick and decisive interruption.

They had both forgotten the presence of young Johnson, who was not only decidedly uncomfortable, but desperately anxious. He was about to speak when, into this already broken scene, came another interruption.

There was a rush of wheels on the driveway outside, the roar of a motor. Before Meade could answer the statement, into the room burst Colonel Illingworth. He was covered with dust, his face was white, his eyes filled with anxiety. The character of the summons had disquieted him beyond measure. Back of him came Severence, the vice president, and Curtiss, the chief engineer.

"Meade, what of the bridge?" he burst out, with a quick nod to his daughter. Colonel Illingworth had not stopped to hunt for a wayside telephone. The automobile driven madly, recklessly through the hills and over the rough roads, had brought him directly to the office in the shortest possible time.

"There is a deflection one inch and three-quarters deep in one of the compression members, C-10-R," was the prompt and terrible answer.

Colonel Illingworth had not been president of the Martlet Bridge company for so long without learning something of practical construction. He was easily enough of an engineer to realize instantly what that statement meant.

"When did you discover it?" he snapped out.

"Last night."

"Is the bridge gone?"

"Not yet."

"Why didn't you let us know?"

"I telegraphed father and, not hearing from him, I came down on the midnight train. It is a holiday in New York as well as here. I just happened to meet father in the office. He sent a telegram to you and not hearing from you, duplicated it an hour later. I tried half a dozen times to get you on the telephone and finally, by a happy chance, got hold of young Johnson."

"Where are your father's telegrams?"

"Here."

Colonel Illingworth tore the first open with trembling fingers.

"Why didn't you tell Abbott?" asked the chief engineer.

"You know Abbott. He said the bridge would stand until the world caved in. Said he could jack the member into line. He wouldn't do a thing except on direct orders from here."

"Your father wires, 'put no more weight on the bridge.' What shall we do?" interposed Colonel Illingworth.

"Telegraph Abbott at once."

"If the bridge goes it means ruin to the company," said the agitated vice president, who was the financial member of the firm and who could easily be pardoned for a natural exaggeration under the terrible circumstances.

"Yes, but if it goes with the men on, it means—Johnson, are you a telegraph operator?"

"Yes, sir."

"Take the key," said the colonel, who, having been a soldier, thought first of the men.

Johnson sat down at the table where the direct wire ran from the bridge company to the telegraph office. He reached his hand out and laid his fingers on the key. Before he could give the faintest pressure to the instrument, it suddenly clicked of its own motion. Everybody in the room stood silent.

"It is a message from Wilchings, the chief of construction foreman of," Johnson paused a moment, listening to the rapid click—"the International—" he said in an awestruck whisper.

It had come!

"Read it, man! Read it, for God's sake!" cried the chief engineer.

"The bridge is in the river," faltered Johnson slowly, word by word, translating the fearful message on the wire. 'Abbott and one hundred and fifty men with it."

CHAPTER VI.

The Failure.

In spite of himself and his confidence in the bridge, Abbott felt a little uneasy the next morning. At bottom he had more respect for Meade's technical knowledge than he had displayed, or even admitted to himself. The younger engineer's terrified alarm, his utter forgetfulness of the amenities between them, his frantic but futile efforts to telephone, of which the operator told Abbott in the morning, his hurried departure to New York, were, to say the least, somewhat disquieting, much more so than he was fain to admit to himself.

Although it involved a hard and somewhat dangerous climb downward and took upwards of a half hour of his valuable time, the first thing the erecting engineer did in the morning was to go down to the pier head and make a thorough and careful examination of the buckled member. C-10-R was, of course, a part of the great lower chord of the huge diamond-shaped truss, which, with its parallel sixty feet away on the other side of the bridge and its two opposites across the river, supported the whole structure. If anything were wrong, seriously, irreparably wrong, with the member and it gave way, the whole truss would go. The other truss would inevitably follow suit, and the cantilever would immediately collapse. Abbott realized that, of course, as he climbed carefully down to the pier head and stood on the shoe.

Abbott, as he stood by the member and surveyed it throughout its length, could easily see that it had buckled, although the deviation was slight, about two inches at its maximum in sixty feet. He brought with him a line and, with infinite care and pains, he drew it taut across the slight concavity like a bow-string. He had estimated the camber, or the distance between the center of the bow and the string, at one and a half inches. As he made more careful measurements, he discovered that it was slightly over one and three-quarter inches. In seven hundred and twenty that was scarcely noticeable, and it did not seem very much to Abbott. As he stood there feeling himself an insignificant figure amid this great interwoven mass of steel, again the sense of its strength and stability came to him overpoweringly, so much so that he laughed aloud in a rather grim fashion at the unwonted nervousness which had been induced in his mind by Meade's words and actions.

But he was a conscientious man, so he pursued his investigations further. He climbed up on top of the member, which was easy enough by means of the criss-crossed lacing, and carefully [illegible] the concavity, or sidewise spring from the right line.

He noticed, by getting down on his face and surveying the lacing bars closely, a number of fine hair-line cracks in the paint, surface traceries apparently, running here and there from the rivet holes. The rivets themselves had rather a strained look. Some of the outer rivets seemed slightly loose, where before they must have been tight, for the members, like all other parts of the bridge, had been carefully inspected at the shop and any looseness of the rivets would certainly have been noticed there. But Abbott's obsession as to the strength of the bridge had grown stronger. Lining it out, crawling over it, feeling its rigidity, he decided that these evident strains were to be expected. Of course the lacings that held the webs together would have to take up a terrific stress. They had been designed for that purpose. Largely because he did not find anything very glaring, and because he wanted to believe what he believed, the chief of construction left the pier head and clambered up to the floor with more satisfaction in his heart than his somewhat surprising anticipation, which had so unwillingly grown under the stimulus of Meade's persistence, had led him to expect.

The whistle was just blowing for the commencement of work when he got back to the bridge floor. He could not but reflect, as the men came swarming along the tracks to begin their day's work, that the responsibility for their lives lay with him. Well, Abbott was a big man in his way, he had assumed responsibilities before and was perfectly willing to do so again, both for men and bridge. The workmen at least had no suspicions or premonitions of disaster.

Wilchings, the chief erecting foreman, knew about the camber. It had not bothered him. As he approached the two exchanged greetings.

"You're out early, Mr. Abbott," said Wilchings.

"Yes, I've been down to examine C-10-R."

Wilchings laughed.

"That little spring is nothing." He looked over the track and through the maze of bracing at the member. "If we had a pier somewhere we could hold up the earth with that strut. You didn't find out anything, did you?"

"Not a thing except some hair-line cracks in the paint around the rivets."

"You'll often find those where there's a heavy load to take up. This bridge will stand long after you and I and every man on it has quit work for good."

Now Wilchings was a man of experience and ability, and if Abbott had needed any confirmation of his opinion this careless expression would have served. He did send him, across the river to examine the half-completed cantilever on the other bank, upon which work had been suspended, awaiting shipments of steel. Wilchings later reported that it was all right, which was what he expected, of course, and this also added to Abbott's confidence.

The day was an unusually hard one. A great quantity of structural steel that had been delayed and which had threatened to hold up the work, arrived that day and the chief of construction was busier than he had ever been. He was driving the men with furious energy. Even under the best conditions it would be well-nigh impossible to complete the bridge on time. Abbott had pride in carrying out the contract and the financial question was a considerable one. Had it not been for that, perhaps, he would have paid more attention to Meade's appeal. So he hurried on the work at top speed.

Late in the afternoon, without saying anything to Wilchings, who had resumed his regular work, or to anybody in fact, Abbott went down to look at the member again. He climbed down a hundred feet or more to make another examination at the expense of much valuable time, for he had not passed so busy a day as that one since the bridge began. Everything was exactly as it had been. Those hair-line cracks had troubled him a little despite Wilchings's remark. He studied them a second time. They were just as they had been, so far as he could tell, no larger, no more numerous. The lacings rang exactly the same under his hammer.

He Made Another Careful Examination.

He climbed back to the floor of the bridge and spent the next half hour inspecting the progress of the work. The suspended span had already been pushed out far beyond the end of the cantilever. The work on the other side of the river had been stopped. As soon as they got the suspended span halfway over they would transfer the workmen and finish the opposite cantilever. Abbott calculated that perhaps in another week they could get it out if he drove the men. He looked at his watch, grudgingly observing that it was almost five o'clock. The men were nothing to Abbott. The bridge was everything. That is not to say he was heartless, but the bridge and its erection were supreme in his mind.

The material was arriving and everything was going on with such a swing and vigor that he would fain have kept them at work an hour or two longer. The men themselves did not feel that way. Some of the employees of the higher grades had got the obsession of the bridge, but to most of them it was the thing they worked at, by which they got their daily bread—nothing more.

Those who worked by the day were already laying aside their tools, and preparing for their departure. They always would get ready so that at the signal all that was left to do was to stop. The riveters, who were paid by the piece, kept at it always to the very last minute.

Abbott had been standing near the outer end of the cantilever and he turned and walked toward the bank. The pneumatic riveters were rat-tat-tatting on the rivet heads with a perfectly damnable iteration of insistent sound. A confused babel of voices, the clatter of hammers, ringing sounds of swinging steel grating against steel, clanking of trucks, grinding of wheels, the deep breathing of locomotives, mingled in an unharmonious diapason of horrid sound.

Abbott was right above the pier head now. He looked down at it through the struts and floor beams and braces, fastening his gaze on the questioned member. There it stood satisfactorily, of course. Yet, something impelled him to walk out on the nearest floor beam to the extreme edge of the truss and look down at it once more, leaning far out to see it better. He could get a better view of it with nothing between it and him. It still stood bravely. It was all right, of course. He wished that he had never said a word about it to anyone. He did not see why he could not regard it with the indifference that it merited. As he stared down at it over the edge of the truss the whistle for quitting blew.

Every sound of work ceased after the briefest of intervals, except here and there a few riveters driving home a final rivet kept at it for a few second, but only for a few seconds. Then, for a moment a silence like death itself intervened. It seemed as if the ever blowing wind had been momentarily stilled. That shrill whistle and the consequent cessation of the work always affected everybody the same way. There was inevitably and invariably a pause. The contrast between the noise and its sudden stoppage was so great that the men instinctively waited a few seconds and drew a breath before they began to light their pipes, close their tool boxes, pick up their coats and dinner pails, and resume their conversation as they strolled along the roadway to the shore.

It seemed to Abbott that it had never been so silent on the bridge before. There was almost always a breeze, sometimes a gale, blowing down or up the gorge through which the river flowed, but that afternoon not a breath was stirring.

Abbott found himself waiting in strained and unwonted suspense for the next second or two, his eyes fixed on the member. The long warm rays of the afternoon sun illuminated it clearly. In that second immediately below him, far down toward the pier head he saw a sudden flash as of breaking steel. Low, but clear enough in the intense silence, he heard a popping sound like the snap of a great finger. Then the bright gleam of freshly broken metal caught his excited glance. The lacing was giving way. Meade was right. The member would go with it. The first pop or two was succeeded by a little rattle as of revolver shots heard from a distance, as the lacings gave way in quick succession. Abbott was a man with a powerful voice and he raised it to its limit.

The idle workmen, just beginning to laugh and jest, heard a great cry:

"Off the bridge, for God's sake!"

Two or three, among them Wilchings, who happened to be within a few feet of the landward end, without understanding why, but impelled by the agony, the appeal, the horror in the great shout of the master builder, leaped for the shore. On the bridge itself some stepped forward, some stood still staring, others peered downward. The great sixty-foot webs of steel wavered like ribbons in the wind. The bridge shook as if in an earthquake. There was a heavy, shuddering, swaying movement and then the 600-foot cantilever arm plunged downward, as a great ship falls into the trough of a mighty sea. Sharp-keyed sounds cracked out overhead as the truss parted at the apex, the outward half inclining to the water, the inward half sinking straight down.

Shouts, oaths, screams rose, heard faintly above the mighty bell-like requiem of great girders, struts and ties smiting other members and ringing in the ears of the helpless men like doom. Then, with a fearful crash, with a mighty shiver, the landward half collapsed on the low shore, like a house of cards upon which has been laid the weight of a massive hand. The river section, carrying the greater load at the top and torn from its base, plunged, like an avalanche of steel, 200 feet down into the river, throwing far ahead of it, as from a giant catapult, the traveler [illegible] end of the suspended span and a locomotive on the floor beneath.

Wilchings, and the few men safe on the shore, stood trembling, looking at the bare pier head, at the awful tangled mass of wreckage on the shore between the pier and the bank; floor beam and stringer, girder and strut, bent, twisted, broken in ragged and horrible ruin, while the water, deeper than the chasm it had cut, rolled its waves smoothly over the agitations of the great plunge beyond the pier. They stared sick and faint at the tangled, interwoven mass of steel, ribboning in every direction—for in the main the rivets held so it was not any defect of joints, but structural weakness in the body of the members that had brought it down—and inclosing as in a net many bodies that a few seconds before had been living men.

They had seen body after body hurled through the air from the outward end and, as they gazed fearfully in horror here and there dark figures floated to the surface of the water. They caught glimpses of white, dead faces as the mighty current rolled them under and swept them on. And no sound came from the hundred and fifty who had gone down with the bridge. The 200-foot fall would have killed them without the smashing and battering and crashing of the great girders that had fallen upon them or driven them from the floor and hurled them, crushed and broken, into the river.

Meade had been right. Abbott had one swift flash of acknowledgment, one swift moment packed with such regrets as might fill a lifetime—an eternity in a hell of remorse—before he, like the rest, had gone down with the bridge!

CHAPTER VII.

For the Son.

The message was received in ghastly silence. No one spoke for a moment. None moved. Colonel Illingworth's face was fiery red. Bertram Meade was whiter than any other man in the room. He was thinking of his father.

The girl moved first. Her father and the young engineer were the two most deeply touched. They were both in agony, both in need of her. Unhesitatingly she stepped to the side of the younger. And the father saw and understood even in the midst of his suffering. She had chosen.

"We are ruined," gasped the colonel, tugging at his collar. "We could stand the financial loss, but our reputation! We'll never get another contract. I might as well close the works. And it is your father's fault. It's up to him. The blood of these men is upon his head. Well, sir, I'll let the whole world know how grossly incompetent he is, how—"

"Sir," said young Meade, standing very erect and whiter than ever, "the fault is mine. I made the calculations. I checked and rechecked them. Nobody could know with absolute certainty the ability of the lower chord members to resist compression. But whatever the fault, it is mine. My father had absolutely nothing to do with it. He is—"

"He's got to bear the responsibility," cried the colonel passionately. "It has his name—"

"No, I tell you," thundered the younger man. "For I'll proclaim my own responsibility. The fault is all mine and I'll publish the fact from one end of the world to the other."

"It's a load I wouldn't want to have on my conscience," said Colonel Illingworth.

"The ruin of a great establishment like the Martlet," added Doctor Severence.

"The dishonor to American engineering," said Curtiss.

"And the awful loss of life," continued the colonel.

"I assume them all," protested the young man, forcing his lips to speak, although the cumulative burdens set forth so clearly and so mercilessly bade fair to crush him.

"It was only a mistake," protested Helen Illingworth, drawing closer to her lover's side, and with difficulty resisting a temptation to clasp him in her arms.

"A mistake!" exclaimed her father bitterly.

"You said yourself," urged the woman, turning to the chief engineer, "that you didn't know whether the designs would work out, that nobody could know, but you were convinced that they would."

"Wait," interrupted the father. "Meade, there is one consequence you have got to bear that you haven't thought of."

"What do you mean?"

"Do you think I'd let my daughter marry a man who had ruined me, an incompetent engineer by his own confession, a—"

"It is just," said Meade. "I have nothing further to do here, gentlemen. I must go to my father."

"Just or not," cried Helen Illingworth, "I can't allow you to dispose of me in that way, father. If he is as blamable as he says he is, and as you say he is, now is the time above all others for the woman who loves him to stand by him."

"Miss Illingworth, you don't know what you are saying," said Meade, forcing himself into a cold formality he did not feel. "I am disgraced, shamed. There is nothing in life for me. My chosen profession—my reputation—everything is gone."

"The more need you have for me, then."

"It is noble of you. I shall love you forever, but—"

Atlantic Elevator Changes Hands.

Last week a deal was closed whereby A. B. Mandt of Georgetown, Minn, became owner of the Atlantic Elevator here. The new owner expects to move up here with his family sometime in June, in order to be here in time for the next harvest.

Mr. Mandt, was a pioneer resident of Pennington County, having formly lived in the town of Kratka, until a few years ago, when he sold out his farm stock and machinery and moved away. He still holds considerable property in Kratka township. He was also county commissioner, when he was here. During the past two seasons he has been engaged in the grain business at Georgetown, Clay County, and is a man of considerable experience in the grain business.

F. C. Petersen, who has been managing the elevator here for the Atlantic Elevator Co. will be transferred to another point. During his management, Mr. Peterson, thru his courteous treatment has worked up a good business here, and he will be missed by his friends, who will wish him good luck, where ever he should locate.

Goodridge Hotel Under New Management.

A deal was put thru last week end whereby L. J. Foss disposed of his hotel business to Patrick Brick.

Mr. Brick, the new proprietor, has for a number of years been engaged in business in Canada, but for the past few months has been located in Florida from which state he came here. He promises to keep up the high standard set by his predecessor.

Mr. Foss who built the hotel here when the town started, a little better then two years ago, is undecided as to what he will do, but expects to go to farming. He and son John, expect to take a trip to Montana, to look over the country.

The rest of the family will stay here until school is out.

East Star News.

(Too late for last week).

Mr. and Mrs. E. Halvorson and son Gussy and Helen Svare visited at the Dolemo Sunday.

The meeting held in the Dolemo schoolhouse was attended by a large crowd.

Miss Ruto Furstnaw visited at the Dolemo over Sunday.

H. Bjorneraa is busy hauling hay from Brunkeberg these days.

Olaf Gauslaa returned from the woods last week.

Miss Anna Dolemo took the Furstnaw school teachers out for a ride last Sunday evening.

Tho. Jacobson and Carl Dolemo made a trip to Thief River Falls Monday.

During the reigns of Yao and Chun in 2300 B. C. virtue pervaded China and crime was unknown, while prosperity abounded.

Writes Of His Trip To Norway.

To the Editor of the Eleven Towns and its readers:—

Since there are so many that asked me to write to them, and as it will take quite a long time, before I could get around and write to all, I shall therefore, thru this paper, let you know how we had it on the trip.

We arrived at Minneapolis Tuesday morning, December 5th, and went to the ticket office at once, but there was already a large crowd ahead of us, and the ticket office was filled up all day Tuesday and also Wednesday.

We left Minneapolis Wednesday evening, Dec. 6th, at 6:40, on a special train made up for us, consisting of twelve passenger coaches, which was filled up with about five hundred passengers. Our train arrived at Chicago Thursday morning Dec. 7th, at 9 o'clock A. M., where we stopped for three hours. From Chicago we went to Washington D. C., and arrived there at 2 P. M. Friday where we stopped six hours and had a good chance to look over the city. This was a great city. We did not see the President, but guess he was on the Mexican border, fighting? The greatest of all sights was the depot, it was certainly some building. They say it cost eleven million.

The people all seemed to take life easy at this city, no wonder, as I think they all had government jobs, but I think the majority of the people in the city were negroes.

The weather was very beautiful, no frost here. We left Washington at 9 P. M., and arrived at New York Saturday morning. Bergensfjord was already there. We were supposed to leave at 2 P. M. but were delayed one hour.

The steamer United States left two hours before the Bergensfjord, but we caught up with her, Sunday morning at 4 A. M. and so we were ahead

We had fine weather Sunday Dec. 10th but the 11th, was quite stormy, and the water was splashing on the deck, yes, and quite a few passengers were in bed sick. There was altogether about 1400 passengers on board, out of which, about 1100 were travelling third class. The accomadations were very good, except the rooms of third class were very small.

We arrived at Kirkwall, England Monday morning Dec. 18th, and here the inspection took place. First they got the mail which was sent to London for inspection, and next the passengers were asked who they were and where they were going, but the most work of all was that all the trunks had to be opened too, for inspection, and they had to be all hoisted up on deck. We were glad that we got clear there so we got leave to go next day at noon, the 19th. It took 20 hours from Kirkwall to Bergen, and 8½ days from New York to Kirkwall, so we were anxious to get ashore when we got to Bergen, where we stopped until 10 in the evening. From there we took the coast steamer to Aalesand. I was surprised to see such a fine city and business seemed to be good. The winter has been very mild, so far along the sea shore there was no snow, at all, but since I got here we had a little, enough for sleighing.

I have not decided how long I will stay, but would be pleased if I could not before long, come back and shake hands with old friends again.

With this, I must close, with greetings to all the readers of the Eleven Towns and a prosperous year to you all, I remain.

Fraternally Yours,
P. K. Amdom.

City Managers Proved.

There are now 40 municipal officials in the United States who are styled "city managers," under the new commission-manager form of government. They are the professional chief executives of their respective municipalities, each with appointive power over the city's entire administrative establishment. They are not popularly elected, but hired for reason of fitness and for an indefinite tenure by a small elected commission of five local men. Generally speaking, three years of trial in a variety of towns have proved that the new plan furnishes a battleground for democracy that makes the unmobilized citizenry nationally effective while the opportunity for expert administration which it offers is usually grasped.

Home Town Helps

TREES ARE KILLED BY GAS

Many Varieties, However, Are Well Able to Withstand Conditions Found in Many Cities.

The death of many trees in the streets and parks of New York, usually ascribed to poor soil or parasites, is largely due to atmospheric conditions, according to the eminent Massachusetts botanist, George E. Stone. In an article in the journal of the New York Botanical garden he says that here are to be found obstacles greater than in other cities to the successful establishments surrounding Manhattan (New Jersey is not particularly mentioned) sulphur dioxide and other poisons rise, only to fall again upon our poor trees. The victim's malady is chronic rather than acute. Its vitality is weakened and then the parasite ends it.

Mr. Stone declares that with the exception of the Austrian pine "practically all the conifers in Central park are dying from the effects of atmospheric gases, and it is rarely that one observes a Norway spruce anywhere within the vicinity of New York that is not either dead or in a state of deterioration." The botanist believes that it is impractical to continue planting conifers here.

Elms, too, are a comparatively easy victim to gases. The effects of the poison are visible in Riverside drive and in Central park. But, as Professor Stone remarks, many of the elms were deplorable specimens to begin with; not such fine types as are growing in the Bronx.

The trees that best withstand gas poison are the Norway maple, black locust, ailanthus and linden.—New York Sun.

FLOWER HOLDERS IN WALL

Unusual Ornamentation That Improves the Looks of Surroundings of House in California.

Flower containers, which are unusual in appearance and striking because of the contrast which they present to their surroundings, have been built into the center of each of three sections of a smooth brick wall in front of a Los Angeles residence. The wall is surmounted by an ornamental iron fence except at the points where the flower holders stand. Each container consists of rough, irregular masses resembling slag, which are cemented together into a symmetrical shape; each holder stands about three and one-half feet high, is a foot or a little more in diameter at the base, and three feet wide at the top.—Popular Mechanics Magazine.

Man's Duty to His Community.

The man who makes money in a community has a duty to perform to that community. It may be that he has made his money by his superior business ability, and that he would have done as well anywhere. That does not alter the case. If his gifts are great his responsibility is equally as great. No man was placed on earth for the sole purpose of making money, and the man who has this as his ideal had better never have been born. It is not an act of charity, but the performance of a simple duty, for the man who has made money to pass a little of it on for the benefit of the community, even though he never expects to see a dollar of his contribution back.—New Canaan (Conn.) Advertiser.

WOULD SERVE FOR FATHER

Son of a Banker Convicted of Murder in Texas Would Go to Prison.

Waco, Tex.—A son's devotion to his father was witnessed here recently when Roscoe Watson, a member of the Texas National Guard, told Judge R. L. Munroe that he would like to assume the penalty assessed against his father, T. R. Watson, who was guilty of the murder of John S. Patterson, state commissioner of banking and insurance, and sentenced to 99 years in state prison.

The jury took the case at night at six o'clock, and the verdict was returned next morning at 10:35.

Watson, it was charged, shot Patterson at Teague on August 28, after Patterson had closed the Farmers and Merchants' State bank at that place, of which Watson was president. Patterson died at Waco on August 28.

Atlantic Elevator Changes Hands.

Last week a deal was closed whereby A. B. Mandt of Georgetown, Minn., became owner of the Atlantic Elevator here. The new owner expects to move up here with his family sometime in June, in order to be here in time for the next harvest.

Mr. Mandt, was a pioneer resident of Pennington County, having formly lived in the town of Kratka, until a few years ago, when he sold out his farm stock and machinery and moved away. He still holds considerable property in Kratka township. He was also county commissioner, when he was here. During the past two seasons he has been engaged in the grain business at Georgetown, Clay County, and is a man of considerable experience in the grain business.

F. C. Petersen, who has been managing the elevator here for the Atlantic Elevator Co. will be transferred to another point. During his management, Mr. Peterson, thru his courteous treatment has worked up a good business here, and he will be missed by his friends, who will wish him good luck, where over he should locate.

Goodridge Hotel Under New Management.

A deal was put thru last week end whereby L. J. Foss disposed of his hotel business to Patrick Brick.

Mr. Brick, the new proprietor, has for a number of years been engaged in business in Canada, but for the past few months has been located in Florida from which state he came here. He promises to keep up the high standard set by his predecessor.

Mr. Foss who built the hotel here when the town started, a little batter then two years ago, is undecided as to what he will do, but expects to go to farming. He and son John, expect to take a trip to Montana, to look over the country.
The rest of the family will stay here until school is out.

During the reigns of Yao and Chun in 2300 B. C. virtue pervaded China and crime was unknown, while prosperity abounded.

Writes Of His Trip To Norway.

To the Editor of the Eleven Towns and its readers:-

Since there are so many that asked me to write to them, and as it will take quite a long time, before I could go around and write to all, I shall therefore, thru this paper, let you know how we had it on the trip.

We arrived at Minneapolis Tuesday morning, December 5th, and went to the ticket office at once, but there was already a large crowd ahead of us, and the ticket office was filled up all day Tuesday and also Wednesday.

We left Minneapolis Wednesday evening, Dec. 6th, at 6:40, on a special train made up for us, consisting of twelve passenger coaches, which was filled up with about five hundred passengers. Our train arrived at Chicago Thursday morning Dec. 7th, at 9 o'clock A. M., where we stopped for three hours. From Chicago we went to Washington D. C., and arrived there at 2 P. M. Friday where we stopped six hours and had a good chance to look over the city. This was a great city. We did not see the President, but guess he was on the Mexican border, fighting. The greatest of all sights was the depot, it was certainly some building. They say it cost eleven million.

The people all seemed to take life easy at this city, no, wonder, as I think they all had government jobs, but I think the majority of the people in the city were negroes.

The weather was very beautiful, no frost here. We left Washington at 9 P. M., and arrived at New York Saturday morning. Bergensfjord was already there. We were supposed to leave at 2 P. M. brt were delayed one hour.

The steamer United States left two hours before the Bergensfjord, but we caught up with her Sunday morning at 4 A. M. and so we were ahead

We had fine weather Sunday Dec. 10th but the 11th, was quite stormy, and the water was splashing on the deck, yes, and quite a few passengers were in bed sick. There was altogether about 1400 passengers on board out of which, about 1100 were travelling third class. The accomadations were very good, except the rooms of third class were very small.

We arrived at Kirkwell, England Monday morning Dec. 18th, and here the inspection took place. First they got the mail which was sent to London for inspection, and next the passengers were asked who they were and where they were going, but the most work of all was that all the trunks had to be opened too, for inspection, and they had to be all hoisted up on deck. We were glad that we got clear there so we got leave to go next day at noon, the 19th. It took 20 hours from Kirkwall to Bergen, and 8½ days from New York to Kirkwall, so we were anxious to get ashore when we got to Bergen, where we stopped until 10 in the evening. From there we took the coast steamer to Aalesand. I was surprised to see such a fine city and business seemed to be good. The winter has been very mild, so far along the sea shore there was no snow, at all, but since I got here we had a little, enough for sleighing.

Certificate Of Incorporation Of The American Drainage Company,

We, the undersigned, for the purpose of forming a corporation under and pursuant to the provisions of Chapter fifty-eight (58) of the General Statutes of Minnesota for 1913 any amendments thereof, do hereby associate ourselves as a body corporate, and do hereby adopt the following Certificate of Incorporation:

ARTICLE I.

Sec. 1. The name of this corporation shall be the American Drainage Company.

Sec. 1. The general nature of the business of this corporation shall be dredging of ditches, road building, road leveling, irrigation, bridge construction, railroad grading, tile drainage, dredge building and repairing, buying and selling of dredge machinery and supplies; to own, hold and dispose of real and personal property, to buy and to sell county, state and municipal warrants and bonds, to enter into contracts for the construction of ditches or performing any of the above named functions of this corporation, to execute bonds for the faithful performance of the contracts entered into, and to do such other acts as may be necessary to carry out the objects of this corporation.

Sec. 3. The principal place of transacting the business of this Corporation shall be in the city of Thief River Falls, County of Pennington, Minnesota.

ARTICLE II.

The time for the commencement of this corporation shall be March 15th, 1917, and the period of its duration shall be thirty years.

ARTICLE III.

The names and places of residence of the persons forming this corporation are Fred A. Blake of Thief River Falls, Minnesota, Lester E. Gesell of Thief River Falls, Minnesota, and Katharine Gesell of Thief River Falls, Minnesota.

ARTICLE IV.

Sec. 1. The management of this corporation shall be vested in a Board of Directors composed of not less than three and not more than five members.

Sec. 2. The names and addresses of the first Board of Directors are Fred A. Blake, Thief River Falls, Minnesota, Lester E. Gesell, Thief River Falls, Minnesota, and Katharine Gesell, Thief River Falls, Minnesota.

Sec. 3. The first officers of this corporation shall be:- President Fred A. Blake, Vice President, Katharine Gesell, and Secretary and Treasurer, Lester E. Gesell.

Sec. 4. All of the above named officers and directors shall hold their respective offices aforesaid until the next annual meeting of the corporation to be held on the first Tuesday of January, 1918, at which time and annually thereafter, a Board of Directors shall be elected from and by the stockholders of this corporation. The annual meeting of this corporation shall be held at its principal place of business on the first Tuesday in January in each year. Immediately after the election of directors, or as soon thereafter as practicable, the directors shall meet and elect from their number a president and a vice president, and from their number or from the stockholders a secretary and a treasurer. Any office except that of President and vice president may be held by one person. The directors and officers of this corporation shall hold their respective offices until their successors have been duly elected and entered upon the discharge of their duties. The first meeting of the stockholders and of the board of directors shall be held at Thief River Falls, Minnesota, on the 28th day of March, 1917, at 10 and 11 A. M. respectively.

ARTICLE V.

The amount of the capital stock of this corporation shall be Fifty Thousand ($50,000.00) Dollars, which shall be paid in, in money or property, or both, in such manner, at such times, and in such amounts as the Board of Directors shall order. The capital stock shall be divided into five hundred shares of a par value of $100.00 each.

ARTICLE VI.

The highest amount of indebtedness or liability to which this corporation shall at any time be subject shall be the sum of $50,000.00

In Testimony whereof, we have hereunto set our hands, this 10th day of March, 1917.

In the presence of
O. A. Naplin Fred A. Blake
Barbara Votava Katharine Gesell
Lester E. Gesell

HOME TOWN HELPS

LAWS FOR FIRE PREVENTION

New York City Seeks to Have Them Enforced Against Owners of Property Who Are Negligent.

The fire commissioner of New York city has, with the consent of the city's law department, brought suit against the owners of several buildings who disregarded an order to install fire-checking appliances for the expenses entailed by the municipality in extinguishing fires in those buildings, which occurred subsequent to the service on the owners of notice to comply with the requirements of the commissioner in the matter of providing safeguards against the spread of fire. The orders in question were issued on March 6, 1916, and because of failure to comply with them were sent to the bureau of penalties in the corporation counsel's office on June 2 for the enforcement of the legal penalty.

One of the buildings was converted into a storage warehouse a few months ago, and at the beginning of the summer, when the families in the neighborhood began to move away, was filled with furniture and household belongings. It is stated that the household belongings of about 700 families were stored in the warehouse.

An itemized statement showing the complete cost to the fire department in the services of the firemen, apparatus, expenditure of coal, water, etc., and damage to apparatus was prepared, and the suit was brought for this amount. As it was a four-alarm fire a very large number of fire companies participated. The firemen worked from 10:20 p. m. until 6:30 a. m. The cost of extinguishing the fire is estimated at $1,500.

The Tongue and Typhus.

According to P. Remlinger, quoted in the Journal of the American Medical association, an infallible method of telling whether a patient has typhoid (or paratyphoid) or the much more serious typhus is to ask him to put out his tongue. The typhoid or paratyphoid patient does it without effort, but if he has typhus he cannot get it beyond his teeth.

Aping His Sire.

"Papa," said five-year-old Tommy, "please give me 5 cents to buy a toy monkey."

"You don't need a toy monkey," answered the father. "You are a monkey yourself."

"Well," continued the little fellow, "give me 5 cents to buy peanuts for the monkey."—Christian Herald.

DO YOUR BEST.

The main thing is to keep on doing our very best all the time. Even although at times we may feel discouraged and hopeless, we must never give in. If you do your best your conscience is clear.

A Bluff.

"Are you sure de lady in dat house cooks wit an oil stove?" asked Plodding Pete.

"Positive," replied Meandering Mike.

"And she has a pump right in de kitchen?"

"Yes."

"G'wan up an' ask her if she don't want us to chop some wood or carry some water."—Washington Star.

Machinery

This spring you will need tillage implements, harrows and cultivators.

Riding attachments and other special features can be furnished for all spring and peg tooth harrows. If you want the best your money will buy, come in and look over our stock.

Wandered Into Literature.

The element of chance holds good with our present day writers, and practically all of them have been diverted from the paths of their chosen life work. It was never intended, for instance, by those who had them in charge when they were youngsters that Thomas Nelson Page or John Kendrick Bangs should write novels or humorous stuff. They had been trained for the law and the Supreme court their natural goal. Neither was it intended that Richard Washburn Child, James Hopper, John Luther Long or Owen Wister should be novelists. Some sort of a federal judgeship was the least expected of them, as they also were intended for the law. Arthur Train was a former assistant district attorney in New York city.

FARMERS' SLICE QUITE THIN

Not Much Money Left for Producer After Creamery Man, Railroad and Retailer Get Theirs.

By the time the creamery man gets his slice out of the milk profits, the railroad another slice, the commission man still another and the retail dealer his, the slice that is left for the man who ought to have the biggest slice of all is pretty thin.

MEDICAL ARMY IS BEING MOBILIZED FOR WAR SERVICE

Council of Internal Defense Builds System Based on Experience in European War.

PART OF PREPAREDNESS WORK

Reserve Corps of 20,000 Surgeons, Physicians and Specialists Being Organized—Civilian Medical Resources Also Mobilized.

Washington.—Modern warfare, as well as the warfare of the future, demands the service of specialists, not only along the firing line to operate the great guns, but back of it, step by step, in the opinion of Dr. F. F. Simpson, chief of the medical section of the Council of National Defense. The medical section, under the direction of Doctor Simpson, is engaged on the gigantic work of organizing the medical resources of the country into an efficient working unit, as one of the most important features of military preparedness.

Broadly, the scheme contemplates the creation of a medical reserve corps of 20,000 surgeons, physicians and specialists in all lines, who will be available for service in the army and navy and civilian population in time of need. In addition to this, the organization will conduct a mobilization of the country's civilian medical resources, factories making medical supplies, hospitals for the care of the ill and wounded and schools for the re-education of those whose injuries on the battlefield make them unfit for the life work they had undertaken.

The mobilization of the medical resources of the country is only a part of the great work which is being undertaken by the Council of National Defense, working in connection with the advisory commission to the Council of National Defense. The council proper is composed of members of the cabinet; the advisory commission is composed of civilians who are recognized leaders in certain lines, and the chairman is Daniel Willard, president of the Baltimore & Ohio Railroad company, whose special attention is devoted to the transportation problems that would face the United States in time of war. Dr. Franklin Martin of Chicago is the chairman of the advisory commission which is dealing directly with the question of medicine as related to war.

Began Organizing a Year Ago.

Each of the divisions represented by the members of the advisory commission has a specific section, a sort of department, directed to carry out its particular work. Doctor Simpson is the chief of the medical section and is working with what is known as the medical advisory committee of the advisory commission. The members are: Doctor Martin, chairman; Surgeon General William C. Gorgas of the army, Surgeon General William C. Braisted of the navy, Surgeon General Rupert Blue of the United States public health service, Col. Jefferson R. Kean, director general of military relief of the American Red Cross; Dr. William H. Welch of Johns Hopkins university, Dr. W. J. Mayo of Rochester, Minn., and Doctor Simpson.

This organization is co-operating with the committee of American physicians for American preparedness, of which Doctor Mayo is chairman and Doctor Simpson is secretary. This committee represents, directly or indirectly, approximately 90,000 members of the medical profession of the United States and was organized more than a year ago as a great patriotic movement for the conservation of life in time of war.

Doctor Simpson, with a staff in his office in Washington, just now is engaged in organizing a medical reserve corps, which will number 20,000 of the foremost surgeons, physicians and other specialists in the country. This is being accomplished through the creation of a committee of nine medical leaders in every state, who will have direct charge of formulating country organizations.

All physicians are being classified according to the work that they do best. Surgeons who are especially proficient in abdominal operations are listed as such; ear, eye, nose and throat specialists all go in one list; dentists—in fact, every branch of the medical profession is dissected and classified, so as to be on hand for particular, special work when the time of need arrives.

Proper Sanitation Important.

It is the object of the commission to get the best men possible in the lines in which they are best. The group will be "hand-picked." When it is completed the medical men who agree to become members will receive a rating in the army or navy and will have any special instruction as to military work that is necessary.

One of the important questions being considered is that of sanitation, and all medical men who are students of this work will be listed as such. Proper sanitation in the mobilization of any army will save thousands of lives, as is demonstrated by a very recent example.

In 1898, at the outbreak of the Spanish-American war, when approximately 165,000 troops were mobilized for service, there developed in the various camps 20,700 cases of typhoid fever, resulting in many deaths. Last summer, when 140,000—almost twice as many—troops were mobilized for service along the Mexican border, only 14 cases of typhoid fever developed. The circumstances, in a general way, were similar. Men were taken from a temperate climate to a warmer climate and were assembled in large camps.

The remarkable decrease in the number of cases of typhoid fever was due to nothing more nor less than the adoption of proper methods of sanitation. The medical corps of the army saw the mistakes of the Spanish-American war and profited by them. It is for the further development of such improved methods that the medical section is now striving.

Lessons From European War.

In this connection object lessons are being derived daily from the war in Europe. Hundreds of reports are being received from medical officers, mostly Americans, who are at the battle fronts and in hospitals, as members of the American ambulance corps and with various Red Cross units. These refer to the new ways of handling the ill and wounded, the treatment of wounds on the battle fields and in hospitals. All of these suggestions are being tabulated for use in the future. Out of them the committee hopes to develop a thoroughly up-to-date system for the United States.

For example, one of the suggestions which is regarded as highly practical is that for conveying wounded soldiers back from the battle lines to far distant hospitals without removing them from the stretchers on which they first are placed. This is accomplished by an interchange of stretchers, a very simple method which never had been put in operation before. In this way the strength of the patient, an important factor for the assistance of his recovery, is conserved.

When a soldier is placed on a stretcher at the battle line he is carried to a waiting ambulance. The ambulance, in turn, receiving the patient, does not place him on one of its own stretchers, but gives a stretcher to the men who have carried the man. If the ambulance drives to a hospital train, which is the general custom where the railroad lines are intact almost to the trenches, the train gives the ambulance a stretcher, accepting at the same time the man and the stretcher on which he is being carried. This system works throughout the system of transportation, so that a British soldier arriving in London, perhaps on the same day he is wounded, arrives on the same stretcher that was at the battle front.

It also is the aim of the commission to work out a system of modern hospital trains, carrying wounded soldiers as far from the battle front as possible, out of the way of the operations and to a place where his recovery is most likely. Delicate operations cannot always be conducted on these trains, but it is possible to do certain things which are important in saving a man's life, such as stopping the flow of blood from a broken artery, the amputation of an arm or leg or the like.

To Learn Full Medical Resources.

When the commission obtains a full list of medical officers throughout the country they will be asked to supply elaborate statistics on the medical resources of the various states, hospitals, schools for the re-education of wounded soldiers, and factories equipped to manufacture medical supplies. The question of finding schools is one of the great considerations. Men who have been blinded will be taught to become self-sustaining at some new line of work; men without arms will be in-

SUCCESSFUL WOMAN LAWYER

Miss Margaret Hamilton Ervin, Jr., of Chattanooga, Tenn., a successful criminal lawyer after two years and a half of practice, is the only woman lawyer now practicing in Tennessee who has appeared before the state supreme court. Miss Ervin was reared on Lookout mountain and obtained her legal education in Tennessee. She is president of the Tennessee Equal Suffrage association and a member of the national council of the National American Woman Suffrage association. At the last Democratic convention she sat with the Tennessee delegation.

CALLED OUT OF TOWN

By JOAN BUSBY.

Jack Newton took down the telephone receiver as the bell rang sharply. "Hello," he called.

"Hello, Jackie!" came his sister's voice. "Are you in a very good humor today?"

He knew what was coming, so he was prepared. "Not very," he answered.

"Oh, pshaw! Well, anyway, I'm going to take a chance."

"Well?"

"Get tickets for the matinee, won't you?"

"I had planned to go fishing."

"I just thought so, that's why I'm heading you off. Now be clever, Jack, and say yes. It's the best show of the season."

Jack knew it and began to soften. "I don't know, sis, I'll see."

"That's the spirit, big brother. You'll thank me some day for saving your life. It's too cold to fish. You'll get pneumonia. And Jackie—" she paused.

"What is it?"

"Get three."

He smelled a mouse. "Why-"

"Flo Van Buren's here."

He exploded. "I thought there was a nigger in the woodpile!"

She was accustomed to his roaring.

"All right, Jackie. We'll be at your office at two. And do be in an amiable mood. Flo is dying to meet you."

"I'm not going to spoil a perfectly good Saturday afternoon trying to entertain a fool girl," he declared to himself. "I'll get the tickets and leave them here, but I'm going fishing."

Which he did.

He went home after lunch, changed his clothes for all the old things he could find in the attic, rubber boots and all, and went out the back way across lots down the road and across country to the river. No one saw him except Susan, the second maid, who, looking out of her own window, saw him leave the yard.

"If those tramps don't stay away from this place," she said, "I'm going to ask Mr. Newton to get a dog."

In the meantime Claire and her guest went to Jack's office promptly at two. On the table was a note with two tickets inclosed. "Sorry, not to be with you, but was called out of town on business. Have a good time. Jack."

"The beast!" cried Claire. "Well, we'll go to the theater, anyway, by ourselves. I guess we'd better hurry. What time is it?"

Flo pulled back her cuff to look at her watch. "Why, I—it isn't here! I haven't got it; it's gone!"

"Florence!"

"Yes, sir, I've lost it! And dad gave it to me when I graduated."

Claire looked her distress. "Oh, I'm so sorry, dear. It was the handsomest one I've ever seen."

Claire called up the house. "It that you, Susan? Will you look and see if Miss Van Buren left her watch there? Look all around, everywhere. I'll wait."

In five minutes Susan returned. "No, Miss Claire, I don't see it. I was just thinkin'. I saw a tramp leave the house a while ago and I'll bet he stole it."

Claire screamed. "What's wrong?" cried Flo.

"It's gone—stolen! Susan says a tramp took it. I'm going to call up the police." Which she did.

Jack Newton, sitting peacefully by a bridge and puffing at his pipe, heard the clatter of hoofs. Looking up he saw three black uniformed gentlemen in black helmets riding his way and evidently interested in him.

"Brown hat turned down, old gray suit and red sweater. It's him," said one, riding quite close.

"Yes, it's me," answered Jack, "and I wish you'd shut up and go away. You're scaring all the fish."

"You're the fish we're after, my man," answered the other. "Stand up! We're going to search you."

They turned out poor Jack's pockets. And there was the watch! One of the policemen held it up triumphantly. "Here's the watch he stole from the Newton house. Come along with us."

"But I didn't get that watch in the Newton house. I found it there on the bridge."

"Tell that to the judge. Just now shut up and come along."

There was nothing else to do, so Jack went.

He would get no hearing until Monday he knew, so he tried bribery. "Say, bobby, when you telephone to the Newtons that you found the watch, ask Miss Claire to come to the station, will you? I'll see that you get something nice for it."

"All right, I'll see what I can do."

So at five o'clock Claire and Flo appeared and were taken to the prisoner's quarters.

"Jack!" screamed Claire.

He grinned. "Did they give you the watch? I found it on the bridge, but they pinched me for a tramp."

"That's where we got out to fix the tire!" both explained at once.

"Jack, this is Miss Van Buren. But I'll introduce you better when you're out of this horrid place. You've made a nice mess out of things this afternoon. Now don't you wish you'd gone with us?"

And, while Claire went away to hunt up somebody to get her brother released he looked at the girl he had declined to meet and who, after all, he decided, was far and away ahead of anyone he'd ever seen.

"Yes, I wish I had," he said intensely. "It just served me right."

SYNOPSIS.

CHAPTER I—Bertram Meade is consulting engineer representing his father, the great Meade, who is the designer of the International bridge, the greatest cantilever structure the world has ever heard of. In the shadow of the uncompleted bridge young Meade receives Colonel Illingworth, president of the Martlet Bridge company, the constructors, and the colonel's daughter, Helen, whom he loves.

CHAPTER II—At dinner the possible weakness of the compression members of the bridge is talked of and Meade defends his father's calculations.

CHAPTER III—Meade and Helen go out upon the bridge in the moonlight and Helen narrowly escapes a fall to the river below. Meade tells his love and they go to the colonel, who approves their marriage when the bridge is finished.

CHAPTER IV—Abbott, the construction engineer, tells Meade there is a deflection in member C-10-R, but makes light of it. Meade, after vainly trying to stop the work, wires his father and follows the telegram to New York.

CHAPTER V—At the great engineer's office father and son try to prevent disaster, but young Meade only reaches Colonel Illingworth as a message comes that the bridge, with 150 men, is in the river.

CHAPTER VI—Abbott goes on with the work, ignoring Meade's protests, but while uneasily inspecting C-10-R the lacings snap under his eyes and he goes into eternity with the other men on the falling bridge.

CHAPTER VII—Young Meade has pointed out to his father the possible weakness, but his objections have been overruled. His father now prepares a statement showing his own fault and sends his secretary, Shurtliff, to the Gazette with it.

He turned resolutely away and walked doggedly out of the room. Helen Illingworth made a step to follow him.

"Helen," interposed her father, catching her almost roughly by the arm in his anger and resentment, "if you go out of this door after that man, I'll never speak to you again."

"Father, I love you. I'm sorry for you. I would do anything for you but this. You have your friends. That man yonder has nothing, nothing but me. I must go to him."

She turned and went out of the room without a backward look or another word, no one detaining her. Now it happened that by hurrying down the hill in the station wagon, Meade had just caught a local train, which made connections with the Reading express some twenty miles away, and Helen Illingworth in her car reached the station platform just in time to see it depart. She remembered that ten miles across the country another railroad ran and if she drove hard she could possibly catch a train which would land her in Jersey City a few minutes before the train her lover caught. She told the chauffeur, who scented a romance and drove as he had never driven before.

The girl caught the express and rode to the Hudson terminal in the city. The newsboys on the street were already crying the loss of the bridge. She saw the story displayed in lurid red headlines as she sprang into the taxi and bade the chauffeur hurry her to the Uplift building downtown. The bill she handed him in advance made him recklessly break the speed limit.

* * * * * * *

Bertram Meade, Sr., had not left the office during the whole long afternoon. He sat alone, quietly waiting for the end. As to the drowning life unrolls in rapid review, so pictures of the past took form and shape in his mind. He recalled many failures. No success is uninterrupted and unbroken. It is through constant blundering that we arrive. He had learned to achieve by failing, as everybody else learns. But failures and mistakes, which were pardonable in the beginning of his career, could not be condoned now; those should have taught him. He realized too late that his later achievement had begot in him a kind of conviction of omniscience, a belief in his own infallibility, bad for a man. His pride had gone before, hard upon approached the fall. He had been so sure of himself that even when the possibility that he might be mistaken had been pointed out and even argued, he had laughed it to scorn. His son's arguments he had held lightly on account of his youth and comparative inexperience—to his sorrow he realized it, too late.

Again came that strange feeling of pride, the only thing which could in any way alleviate his misery or lighten his despair. It was his own son who had pointed out the possible defect. Youth more often than not disregards the counsel of age. In this case age had made light of the warnings of youth. It was a strange reversal, he thought, grimly recognizing a touch of sardonic and terrible humor in the situation.

"Whom the gods destroy they first make mad." Well, he had been mad enough. If he had only listened to the boy. And now there was nothing he could do but wait. Yes, as the long hours passed and the sun declined, and the evening approached, there suddenly flashed upon him that there was still something he could do. He had experienced some strange physical sensations during that afternoon, in his breast, some sharp pains about his heart. He forgot them for the moment in the idea that had come to him.

When the bridge fell he would avow the whole responsibility, take all the blame. Fortunately for his plans, his son had reduced to writing his views on the compression members, which had almost taken the form of protest and this letter had been handed to his father. His first mind had been to tear it up after he had read it and had overborne the objections contained therein, but on second thought he had carefully filed it away with the original drawings. It was, of course, in the younger Meade's own handwriting.

He went to his private safe, opened the drawings and found the letter attached to the sheet of drawings. He put back the other drawings and closed the safe without locking it. Then he went back to the desk and considered the document. He had been blind, mad. He laid the paper down on his desk and put his hand to his heart.

Of course he would submit those papers to the public at once. Was there anything else he could do? Yes. He sat down at the desk and drew a sheet of paper before him and began to write. Slowly, tremblingly, he persevered, carefully weighing his words before he traced them on paper. He had not written very long before the door of the outer office opened and he heard the sound of soft footsteps entering the room. He recognized the newcomer. It was old Shurtliff, a man who had been his private secretary and confidential clerk for many years. He stopped writing and called to him.

Shurtliff was an old bachelor, gray, thin, tall, reticent. He had but one passion—Meade, Sr.; but one glory—the reputation of the great engineer. Yes, and as there is no great passion without jealousy, Shurtliff was filled with womanly jealousy of Bertram Meade because his father loved him and was proud of him. Shurtliff knew all about the private affairs of the two engineers, father and son. He knew all about the protest of the younger Meade. The father had told him just what he intended to do with it.

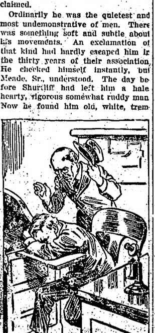
Shurtliff might have been a great man if left to himself or forced to act for himself. But pursuing a great passion so long as he had, he had merged himself in the more aggressive personality of his employer and friend. He had received a good engineering education, but had got into trouble by a failure, a rather bad mistake in his early career, too big to be rectified, to be forgiven, or condoned. The older Meade had taken him up, had been kind to him, had offered to try to put him on his feet again, but his big failure had increased his natural timidity, so he stayed on. He had become a part of the old man's life.

Young Meade had never been able to get very far into the personality of Shurtliff but he liked him and respected him. He realized the man's devotion to his father, and he understood and admired him. Aside from that jealousy the old man could not but like the young one. He was too like his father for Shurtliff to dislike him. The secretary wished him well; he wanted to see him a great engineer. Of course he could never be the engineer that his father was. That would not be in the power of man. But still, even if he never attained that height, he could yet rise very high. Shurtliff would not admit that there was anything on earth to equal Meade, Sr.

The secretary was greatly surprised as he stopped beside his own desk to hear his name called from the inner office. He recognized his employer's voice, of course, yet there was a strange note in it which somehow gave him a sense of uneasiness. He went into the room at once and stopped aghast.

"Good God, Mr. Meade!" he exclaimed.

Ordinarily he was the quietest and most undemonstrative of men. There was something soft and subtle about his movements. An exclamation of that kind had hardly escaped him in the thirty years of their association. He checked himself instantly, but Meade, Sr., understood. The day before Shurtliff had left him a hale hearty, vigorous somewhat ruddy man Now he found him old, white, trembling, stricken. Meade looked at Shurtliff with a lack-luster eye and with a face that was dead while it was yet alive.



"Mr. Meade, What Is the Matter?"

"Mr. Meade," began the secretary a second time, "what is the matter?"

"The International bridge," answered the other, and the secretary noticed the strangeness of his voice more and more. "It's about to collapse. Perhaps it has failed already."

Meade passed his hand over his brow and then brought it down heavily on the desk.

"As we sit here, maybe, it is falling," he added somberly in a sort of dull impersonal way.

Into the mind of the secretary came a foolish old line: "London bridge is falling down, falling down!" He must be mad or Meade must be mad.

"I can't believe it, sir. Why?"

"There's a deflection in one of the lower chord members of one and three quarters inches. It's bound to collapse. The boy was right, Shurtliff," explained Meade. "I was wrong. I am ruined."

"Don't say that, sir. You have never failed in anything. There must be some means."

"Shurtliff, you ought to know there is no power on earth could save that member. It's only a question of time when it will fall."

The secretary leaned back against the doorjamb, put his hand over his face, and shook like a leaf. The old man eyed him.

"Don't take it so hard," he said. "It's not your fault, you know."

"Mr. Meade," burst out the other man, "you don't know what it means to me. A failure myself, I have gloried in you. I—you have been everything to me, sir. I can't stand it."

"I know," said Meade kindly. He rose and walked over to the man, laid his hand on his shoulder, took his other hand in his own. "It hurts more perhaps, to lose your confidence in me than it would to lose the confidence of the world."

"I haven't lost any confidence, sir. We all make mistakes. I made one, you know, and you took me up."

"It's too late for anybody to take me up. Men can't make mistakes at my age. No more of that. We have still one thing to do, set the boy right before the world."

"But if I were your son, sir, said the secretary, "rather than see you ruined I would take the blame on myself. He can live it down."

"But he is not to blame. On the contrary, he was right, and I was wrong. Here, Shurtliff, is his own letter. You know it; you saw him give it to me. You heard the conversation, and I have written out a little account explaining it, stating that I made light of his protests, acknowledging that he was right and I was wrong, taking the whole blame upon myself. He will be back here tonight, I am sure. I intended to give it to him."

"Oh, don't do that, Mr. Meade."

The telephone bell rang.

"The bridge!" clamored the insistent bell.

Staggering almost like a drunken man, Shurtliff left his place by the door, reached his thin hand out and lifted up the telephone, its bell vibrating, it seemed, with angry, venomous persistence through the quiet room.

"It's a telegram," he whispered. "Yes, this is Mr. Meade's private secretary. Go on," he answered into the mouthpiece of the telephone.

There was another moment of ghastly silence while he took the message. It was typical of Shurtliff's character that in spite of the horrible agitation that filled him, he put the instrument down carefully on the desk, methodically hanging up the receiver before he turned to face the other man. He spoke deprecatingly. No woman could exceed the tenderness he managed to infuse into his ordinarily dry, emotionless voice.

"The bridge is in the river, sir."

"Of course; any more."

"Abbott—and one hundred and fifty men with it."

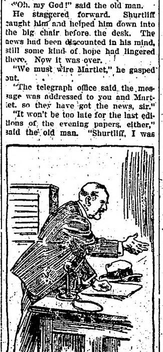
"Oh, my God!" said the old man.

He staggered forward. Shurtliff caught him and helped him down into the big chair before the desk. The news had been discounted in his mind, still some kind of hope had lingered there. Now it was over.

"We must wire Martlet," he gasped out.

"The telegraph office said the message was addressed to you and Martlet, so they have got the news, sir."

"It won't be too late for the last editions of the evening papers, either," said the old man. "Shurtliff, I was going to give these documents to the boy when he got back, but I want them to appear simultaneously with the news of the failure of the bridge. Wait." He seized the pen and signed his name to the brief letter of exculpation.



"We Must Wire Martlet," He Gasped Out.

The writing in the body of the document was weak and feeble, the signature strong and bold. He gathered the papers up loosely.

"Here," he said, "I want you to take them to a newspaper—the Gazette—that will be certain to issue an extra if it is too late for the last edition. I want this letter of his with mine to go side by side with the news. There must not be a moment of uncertainty about it."

"Mr. Meade, for God's sake—"

"Don't stop to argue with me now. Take a taxi and get there as quickly as you can. You are carrying my honor, and my son's reputation. Go."

CHAPTER VIII.

For the Father.

Two and one-half hours later a group of anxious reporters, clustered at the door of the Uplift building, were galvanized into life by the arrival of a taxicab. Out of it leaped Bertram Meade. He was recognized instantly.

"You know about the bridge, Meade?" asked one, forcing his way through the crowd, which broke into a sudden clamor of questioning.

Meade nodded. He recognized the speaker, their hands met. This was a man of his own age named Rodney, who had been Meade's classmate at Cambridge, his devoted friend thereafter. Instead of active practice, he had chosen to become a writer on scientific subjects and was there as a representative of the Engineering News. There were sympathy and affection in his voice and look, and in the grasp of his hand.

"Have you seen my father, Rodney?" Meade asked, quickly moving to the elevator, followed by all the men.

"At the house they said he was not there, and here at the office we get no answer."

As Meade turned he saw his father's secretary coming slowly through the entrance. "Shurtliff," he called out. "My father?"

"I left him in the office two hours ago. He told me to—to—go away and—leave him alone. I have been wandering about the streets."

Outside in the street the newsboys were shrieking:

"Extry! Extry! All about the collapse of the International bridge. Two hundred engineers and workmen lost."

Shurtliff had one of the papers in his hand. Meade tore it from him

"Who Is Responsible?" stared at him in big red headlines.

"Gentlemen," said Meade, "I can answer that question"—he held up the paper so that all might see—"the fault—the blame—is mine."

"We'll have to see your father, Bert," said Rodney.

"He is in this building, we know, and he'll never leave it without running the gantlet of us all," cried another amid a chorus of approval.

Meade realized there was no escape. They all piled into the elevator with him and Shurtliff. They followed him up the corridor. He stopped before the door of the office.

"I forbid you to come in," he said. "This is my father's private—"

"Have no fear, Bert," said Rodney firmly. "We don't intend to break in. We understand how you feel. We will wait here until you say the word, and then all we shall want will be a statement from your father."

"Thank you, old man. Come, Shurtliff," said Meade, turning his key in the lock. The two men entered and carefully closed the door behind them.

The door was scarcely shut when Helen Illingworth left the elevator and came rapidly up the corridor. She had called at the office before and had no need to ask the way. The reporters gathered around the door moved to give her passage while they stared at her with deep if respectful curiosity.

"Pardon me, gentlemen," she began, "but I am very anxious to see the younger Bertram Meade."

"He has just gone into the office," answered Rodney respectfully.

The girl raised her hand to knock.

"A moment, please; perhaps you had better understand the situation. The International bridge—"

The girl came to a sudden determination. She could not declare herself too soon or too publicly.

"My name is Illingworth," she said, and as the hats of the surprised reporters came off, she continued, "I am the daughter of the president of the Martlet Bridge company, which was erecting the International."

"Yes, Miss Illingworth," answered Rodney, "and did you come here to represent him?"

"I am Mr. Bertram Meade, Jr.'s, promised wife, and I am here because it is the place where I ought to be. When the man I love is in trouble, I must be with him."

She raised her hand again, but Rodney was too quick for her. He knocked lightly on the door, and then struck it heavily several times. The sound rang hollowly through the corridor, as it always does when the door of an empty room is beaten upon. There was no answer for a moment.

"Oh, I must get in," said the woman.

Rodney knocked again, and this time the door was opened. Shurtliff stood in the way. He had been white and shaken before, but now so anguished and shocked was his appearance that everybody stared. Shurtliff moistened his lips and tried to speak. He could not utter a word, but he did manage to point toward the private office.

"Perhaps I would better go first," said Rodney, as the secretary stepped back and gave them passage.

Helen Illingworth followed, and then the rest. Young Meade was standing erect by his father's chair. The great bulk of the old engineer was slouched down, his body bent over, his head on the desk, face downward. One great arm, his left, extended, shot straight across the desk. His fist was clenched, his right arm hung limp by his side. He was still.

There was something unmistakably terrible in his motionless aspect. They had no need to ask what had happened. A sharp exclamation from the woman was the only sound that broke the silence, as she stepped to her lover's side.

"You can't question my father now, gentlemen," said Meade; "he is dead."

In the outer office they heard Shurtliff brokenly calling the doctor on the telephone and asking him to notify the police.

"Did he—" began one, hesitatingly.

"He was too big a man to do himself any hurt, I know," answered Meade proudly, as he divined the question. "The autopsy will tell. But I am sure that the failure of the bridge has broken his heart."

"And we can't fix the responsibility now," said Rodney, who for his friend's sake was glad of this consequence of the old man's death.

"Yes, you can," said the young man.

He leaned forward and laid his right hand on his dead father's shoulder. Helen Illingworth had possessed herself of his left hand. She lifted it and held it to her heart. The engineer seemed unconscious of the action, and still it was the greatest thing he had ever experienced. Meade spoke slowly and with the most weighty deliberation in an obvious endeavor to give his statement such clear definiteness that no one could mistake it.

"Here in the presence of my dead father," he began, "I solemnly declare that I alone am responsible for the design of the member that failed. My father was getting along in years. He left a great part of the work to me. He pointed out what he thought was a structural weakness in the trusses, but I overbore his objections. I alone am to blame. The Martlet Bridge company employed us both. They said they wanted the benefit of my father's long experience and my later training and research."

"Do you realize, Meade," said Rodney, as the pencils of the reporters flew across their pads, "that in assuming this responsibility which, your father being dead, cannot be—"

"I know it means the end of my career," said Meade, forcing himself to speak. "My father's reputation is dearer to me than anything on earth."

"Even than I?" whispered the woman.

"Oh, my God!" burst out the man, and then he checked himself and continued with the same monotonous deliberation as before, and with even more emphasis, "I can allow no other interest in life, however great, to prevent me from doing my full duty to my father."

He had been fully resolved to protect his old father's fame had the father survived the shock. The appeal of the dead man was even more powerful than if he had lived. Meade could not glance down at that crushed, broken, impotent figure and fail to respond. It was not so much love—never had he loved Helen Illingworth so much as then—as it was honor. The obligation must be met though his heart broke like his father's; even if it killed him, too.

And the woman! How if it killed her? He could not think of that. He could think of nothing but of that inert body and its demand.

"Have you no witnesses, no evidence to substantiate your extraordinary statement?" asked Rodney.

"I can substantiate it," said Shurtliff, coming into the room, having finished his telephoning. "The doctor and the police will be here immediately, but before they come—" and he drew himself up and faced the reporters boldly. "Gentlemen, I can testify that everything that Mr. Bertram Meade has said is true. I happened to be here when my dead friend and employer got the telegram announcing the failure of the bridge and, although he knew it was his son's fault, he bravely offered to assume the responsibility and he told me to go to the newspapers and tell them that it was his fault and that his son had protested in vain against his design."

"Why didn't you do it?" asked one of the reporters.

"I couldn't, sir," faltered the old man. "It wasn't true. The son there was to blame."

He sank down in his seat and covered his face with his hands and broke into dry, horrible sobs. It was not easy for him either, this shifting of responsibility.

"You see," said young Meade, "I guess that settles the matter. Now you have nothing more to do here."

"Nothing," said Rodney at last, "not in this office at least. We must wait for the doctor, but we can do that outside."

One by one the men filed out, leaving the dead engineer with his son, the secretary, and the woman in the room.

"Bert," said the woman, laying her hand on his shoulder, "why or how I feel it I cannot tell, but I know in my heart that you are doing this for your father's sake, that what you said was not true. Things you have said to me—"

"Did I ever say anything to you," began Meade in fierce alarm, while Shurtliff started to speak but checked himself, "to lead you to think that I suspected any weakness in the bridge?"

The woman was [illegible]ly and listening to him with every sense on the alert. Nothing was escaping her and she detected in his voice a note of sharp alarm and anxiety as if he might have said something which could be used to discredit his assertion now.

"Perhaps not in words but in little things, suggestions," she answered quietly. "I can't put my hand on any of them, I can hardly recall anything, but the impression is there."

Meade smiled miserably at her and again her searching eyes detected relief in his.

"It is your affection that makes you say that," he said, "and as you admit there is really nothing. What I said just now is true."

It was much harder to speak the lie to this clear-eyed woman, who loved him, than to the reporters. He could scarcely complete his sentence, and in the end sought to look away.

"Bertram Meade," said the woman, putting both her hands upon his shoulder, "look me in the face and tell me that you have spoken the truth and that the blame is yours."

Meade tried his best to return her glance, but those blue eyes plunged through him like steel blades. He did not dream in their softness could be developed such fire. He was speechless. After a moment he looked away. He shut his lips firmly. He could not sustain her glance, but nothing could make him retract or unsay his words.

"I have said it," he managed to get out hoarsely.

"It's brave of you. It's splendid of you," she said. "I won't betray you. I don't have to."

"What do you mean?" asked the man.

But the woman had now turned to Shurtliff. In his turn she also seized him in her emotion and she shook him almost eagerly.

"You, you know that it is not true. Speak!"

But she had not the power over the older man that she had over the younger. The secretary forced himself to look at her. He cared nothing for Miss Illingworth, but he had a passion for the older Meade that matched hers for the younger.

"He has told the truth," he cried almost like a baited animal. "No one is going to ruin the reputation of the man I have served and to whom I have given my life without protest from me. It's his fault, his, his, his!" he cried, his voice rising with every repetition of the pronoun as he pointed at Meade.

Helen Illingworth turned to her lover again. She was quieter now.

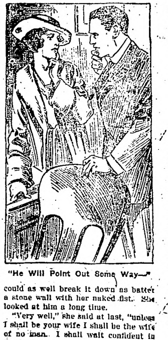
"I know that neither of you is telling the truth," she said. "Lying for a great cause, lying in splendid self-sacrifice. You are ruining yourself for your father's name and he is abetting. Why? It can't make any difference to him now. But it makes a great difference to me. Have you thought of that? I'm going to marry you anyway. Only tell me the truth, Bert. By our love I ask you. If you want me to keep your secret I'll do it. But if you won't tell me I'll get that evidence, I will find out the truth, and then I shall publish it to the whole world and then—"

"And you would marry me then?" asked Meade, swept away by this profound pleading.

"I will marry you now, instantly, at any time," answered the girl. "Indeed you need me. Guilty or innocent, I am yours and you are mine."

"Listen," protested the engineer, "nothing will ever relieve me of the blame, of the shame, of the disgrace of this. But I am a man. I have youth still, and strength and inspiration. Until I can hold up my head among men I am nothing to you and you are free."

There was a finality in his tone which the woman recognized. She could as well break it down as batter a stone wall with her naked fist. She looked at him a long time.



"He Will Point Out Some Way—"

"Very well," she said at last, "unless I shall be your wife I shall be the wife of no man. I shall wait confident in the hope that there is a just God, and that he will point out some way."

Alvilda Thronson is spending a few days with her sister.

A. T. Northone has been on the sick list for some time.

Ben Howland has been hauling hay the past two days.

Date Is Set For Final Hearing.

Judge C. W. Stanton has named April 26 as the date upon which the final hearing on the establisment of Judicial ditch No. 89 in Pennington, Beltrami and Marshall counties will be held and the city of Bemidji as the place for holding the same.

At the time the viewers were pursuing their work considerable objection to this ditch developed, particularly in the township of North in Pennington county. The farmers even went so far in their opposition as to retain an attorney for the purpose of bringing an injunction to prevent any further work. This objection seems to have largely died down since the reports were submitted and the matter became throughly understood. In fact there are only four forties in the town upon which any assessment is placed, and it is claimed that these belong to one man who is in favor of the project. Further than this, the parties in favor of the ditch say that there are no road assessments against North township and hence the people residing there are but incidentally involved in the proceedings.

Outside of North there are four townships in Pennington county interested in this proposed outlet, namely, Reiner, Goodridge, Cloverleaf and Silverton. Some objection has been encountered in Cloverleaf and Silverton, but it is understood that this was voiced by but a small portion of the population. The people of the other two towns are strongly in favor of the work being done.

When the subject of this ditch was first broached it is certain that considerable misunderstanding existed as to its purpose and effect. It was thought that the cost would be confiscatory and that the lands near the outlet would be flooded by the added volume of water conveyed. A closer study of the subject has convinced most of the objectors that their fears were unfounded in both instances and that a vast section of country will be benefitted by this added outlet.

A total of 908 land owners, residing in twelve townships of the three counties, are officially served with this notice of hearing. Attorney A. A. Andrews of Bemidji, represents the petitioners, and James Manahan will appear for the objectors. The general impression seems to be that by the time the hearing is held the opposition will have practically disappeared and that the ditch will be ordered established.—Thief River Falls Times.

The Comet Publishing Company Is Peeved.

WE RETRACT.

In our March 15th issue we made some comments on the Comet Publishing Company of Thief River Falls. It seems that this organization is above criticism, and their attorney has written us a letter, demanding that we retract, claiming our article was libelous. Of course we retract, but where the libel comes in is a puzzel to us. We refer our readers to the editorial again, and ask them to read it and judge for themselves.

The Postal Department issued a fraud order against the Comet Publishing Company's method of securing subscribers. That we believe is admitted. Some of the backers got together and subscribed funds enough to send G. Howard Smith and others to Washington D. C. to prevail upon the Department heads to rescind the order but failed. There must have been something wrong with the system, otherwise the Department would not have taken this stand. We speak of what we have heard, and from what we have learned through articles appearing in the Thief River Falls newspapers.

Now anything we may have said, except what is contained in the above paragraph, we retract. But how we can libel a concern which is neither an individual, partnership, nor corporation is beyond us. But we retract. If we were a mighty organization like the Comet Publishing Company, with a million subscribers to-be, we would fight it out, for the sake of the freedom of the press, but we are too insignificant, when compared with the mighty. And besides we hate lawsuits, and do not know anything about courts and law[illegible] and feel satisfied as long [illegible] we [illegible] need to use them. So we [illegible] e mighty proud that our [illegible] ead and recognized by [illegible] ersons.

[illegible] nual Meeting.

[illegible] g of the Eastern [illegible] hone company met [illegible] Hall on March 5th [illegible] lled to order by the [illegible] Poppenhagen.

[illegible] he last annual meeting [illegible] spec[illegible] irectors meeting of the [illegible] ar 1916 were read and approved.

Treasurers report for year 1916 read and approved.

The following resolution were by the Board of Directors moved and recommended to be approved at the annual meeting in Goodridge on March 5th, 1917.

Resolution No. 1.

That the price of shares of the Eastern Development Telephone company be raised $5.00 per share, from $30 to $35 and all shares now subscribed be assessed the same amount $5.00 and the amount collected on this assessment to be applied on debt of company.

Motion by A. Foragen and seconded by S. J. Gangness this resolution to be approved as read, carried.

Resolution No. 2.

That each and all shareholders in the Eastern Development Telephone Co's. lines who have phones in operation, or getting free service on these lines in any way, shall be required to pay this company $1.50 for Switch Operation at Goodridge, and $1.50 for repairing and maintenance in general of the lines for ensuing year 1917.

Motion by L. P. Poppenhagen and seconded by S. Larson that this resolution be approved and read, carried.

Resolution No. 3.

Rates of Telephone rents inside Incorperated limits of the village of Goodridge for ensuing to be;- When company will furnish and maintain a phone on single line to switchboard $1.50 per month. When renter furnishes and maintains phone on single line to board 75 cents per month. Additional phones on same line 50 cents per month.

Shareholders inside Goodridge to pay 25 cents per month. Rate of renters on Farm lines was moved and carried to be changed to 75 cents per month same as Goodridge. All rents include free Telephone Service to any part of the Eastern Development lines and also other Telephone lines that said company may obtain free exchange with.

Motion by Cunningham and seconded by Julius Anderson that this resolution be approved as read. Carried

Resolution No. 4.

Adjoining Local Telephone lines that desires free exchange with the Eastern Development Telephone company will be required to pay to said company for switching operation at the rate of $1.10 per year for each phone on their line and by the payment of this rate includes free service to any part of the free exchange system obtained in this way.

The officers of each local line is required to do the collecting of these flat rates, and also Tolls if any there shall be for any other lines, and pay same to the Treasurer of the Eastern Development Telephone Co. quarterly in advance, and followed by the report of the number of phones in operation on the line. Further more all local telephone lines are required to charge and collect regular toll rates according to distance from none shareholders or centers on this free exchange system but these tolls are exclucive earnings of the local line where the message originates.

Motion by Cunningham seconded by Julius Anderson that this resolution be approved as read.

Resolution No. 5

That each and all shareholders shall be required, when the telephone line is out of order to look after the cause of trouble along the line one half the distance to the next phone, and if any cause of trouble is found he shall be required to buy and repair same to a serviceable condition without pay. If unable to do so he shall give notice to the nearest Director and this Director shall see too that line is repaired as soon as possible. If the cause of trouble shall be found in any subscriber's phone, said phone shall be taken off the line until fixed.

Motion made by S. Larson seconded by Ole Sund that this resolution be as read, carried.

Resolution No. 6.

That it shall be strictly understood that all toll messages shall be paid at the time of phoning or at the end of each and every month. And further more if tolls or any assessment is not paid within 3 months from time it is due, a penalty of 25 per cent shall be added to the amount so due. And then when tolls, assessment and penalty of any shareholder amounts to $20.00, his certificate of stock shall by the Board of Directors be cancelled and also refused free service on the line.

Motion by E. J. Eberhardt seconded by E. P. Eggestuen that this resolution be approved as read. Carried

Resolution No. 7.

That one party may hold two or more shares of stock in this Company. Providing this same party desires to have two or more phones in operation on the line.

Motion by S. Gangness Seconded by Eggestuen that this resolution be approved as read, carried.

Resolution No. 8.

In regard to free exchange and joint Switch with the Red Lake Eastern Marshall Telephone Company. This resolution was read and discussed, but not voted on. In place of this resolution, a motion was made by E. J. Eberhardt, seconded by Swan Larson that the Board of Directors of this company is considered a committee, to meet with a like committee of the Red Lake Eastern Marshall Telephone company for the purpose to agree on free exchange and Joint Switch in Gooeridge; carried. Motion was made and duly carried that one half of the 1917 assessments shall be due and paid April 1st, 1917, and the balance one half be due and paid November 1st 1917.

Moved and carried that this company from now on shall have 5 Directors, and that two new Directors be elected at this meeting. W. G. Cunningham and Gust Fundaner were nominated as directors for a term of 3 years.

Moved and carried that this meeting suspend rules and elect the officers by Acclamation.

Moved and carried that W. G. Cunningham is elected Director for a term of 3 years. Moved and carried that Gust Fundanet is elected Director for a term of 3 years.

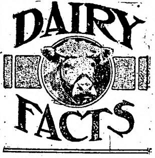
For a Director located on the High Landing line:- Haney Halvorson and Matt Erickson were nominated, and voted on by ballot, Haney Halverson received 8 votes and Matt Erickson received 2 votes, Halverson declared elected for a term of 3 years.

Swan Larson has rendered his resignation as Diaector and same was accepted.

Moved and carried that John W. Anderson be elected Director for a term of one year in place of S. Larson. Moved and carried that O. E. Wiseth be elected Secretary and Treasurer, for a one year term.

Moved and carried that the Secretary shall have the Minutes of this meeting printed and a copy of same sent to patrons of this company who were not present. Meeting adjourned.

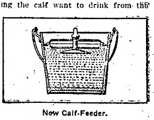
O. E. Wiseth, Sec'y.



CALF-FEEDER IS ARTIFICIAL.

Combination Pacifier and Nurse Bottle Attachment for Milk Pails Is Shown in Drawing.

Who has not more than once angrily kicked a calf "in the slats" while trying to teach it to take its liquid dinner from a pail instead of from its mother's udder in nature's well approved manner? But the new-efficiency movement in the business of farming has approved the artificial method of feeding the calves so as to increase the income to be obtained from milking their mothers. Some ingenious son of a farmer seems to have set himself the task of devising some method of making the calf want to drink from the pail rather than simply, and more or less forcibly, making him drink from it. The result of that thinking is the combination pacifier and nurse bottle attachment for milk pails shown in the accompanying drawing. It consists of a metal float carrying a teatlike attachment on which may be placed a rubber nipple. This arrangement lets the calf bunt and suck all it wants to, but still forces it to draw its nourishment from the pail instead of from the maternal udder. All you have to teach it is to stick its nose downward instead of upward in order to get hold of the nourishing teat.—Farming Business.



Now Calf-Feeder.

DAIRY COW AND HER PRODUCT

Every Animal in Herd Should Be Tested Annually for Tuberculosis —Use Concrete Floors.

It is a good rule to have every cow in a herd tested at least once a year for tuberculosis.

To insure steady motion, a separator must be fastened to a solid foundation. A concrete floor gives this better than anything else.

Sometimes lack of exercise causes barrenness in dairy cattle. It is never well to allow the dairy cow to take on much fat. Always give her plenty of exercise.

The average cow in full milk flow will consume from 30 to 40 pounds of silage to advantage. Add to this some 10 pounds of dry fodder, and the roughage feed is complete.

Only concrete floors should be permitted in a dairy barn. They cost more, perhaps, originally, but they are the cheapest in the long run. For one thing, they make it possible to save some of the liquid manure, a very valuable item.—Clemson College Bulletin.

SIZE OF DAIRYMAN'S INCOME

Noticeable Increase Where Purebred Bulls Are Maintained—Scrubs Do Not Pay for Keep.

Figures recently compiled by the University of Illinois seem to show that there is a definite relation between a good bull and the size of the dairyman's income:

On 124 dairy farms where purebred bulls were kept at the head of the dairy herd, the average farm income was $1,102 after deducting the taxes, interest on investment, etc.

On 406 dairy farms where a grade bull stood at the head of the herd the farm income was found to be $734 per year, and on 83 farms where scrub bulls were used the farm income was —$243, or failed by $343 to pay interest on the investment, to say nothing about pay for the owner's time.

FEEDING COWS WHOLE BEETS

Somewhat Larger Yield of Milk and Milk Fat Obtained Than When They Were Chopped.

In a foreign experiment with dairy cows it was found that the feeding of whole beets produced a somewhat larger yield of milk and milk fat than when chopped beets were fed, this increase probably being due to more complete mastication and utilization.

Ben Howland has been hauling hay the past two days.

Date Is Set For Final Hearing.

Judge C. W. Stanton has named April 26 as the date upon which the final hearing on the establisment of Judicial ditch No. 39 in Pennington, Beltrami and Marshall counties will be held and the city of Bemidji as the place for holding the same.

At the time the viewers were pursuing their work considerable objection to this ditch developed, particularly in the township of North in Pennington county. The farmers even went so far in their opposition as to retain an attorney for the purpose of bringing an injunction to prevent any further work. This objection seems to have largely died down since the reports were submitted and the matter became throughly understood. In fact there are only four forties in the town upon which any assessment is placed, and it is claimed that these belong to one man who is in favor of the project. Further than this, the parties in favor of the ditch say that there are no road assessments against North township and hence the people residing there are but incidentally involved in the proceedings.

Outside of North there are four townships in Pennington county interested in this proposed outlet, namely, Reiner, Goodridge, Cloverleaf and Silverton. Some objection has been encountered in Cloverleaf and Silverton, but it is understood that this was voiced by but a small portion of the population. The people of the other two towns are strongly in favor of the work being done.

When the subject of this ditch was first broached it is certain that considerable misunderstanding existed as to its purpose and effect. It was thought that the cost would be confiscatory and that the lands near the outlet would be flooded by the added volume of water conveyed. A closer study of the subject has convinced most of the objectors that their fears were unfounded in both instances, and that a vast section of country will be benefitted by this added outlet.

A total of 908 land owners, residing in twelve townships of the three counties, are officially served with this notice of hearing. Attorney A. A. Andrews of Bemidji, represents the petitioners, and James Manahan will appear for the objectors. The general impression seems to be that by the time the hearing is held the opposition will have practically disappeared and that the ditch will be ordered established.—Thief River Falls Times.

The ELEVEN TOWNS

Entered at the postoffice at Goodridge, Minn. as second class mail matter.

The Adamson law was declared constitutional after having been kept in cold storage for six months. We knew it would be constitutional for this occasion. You see the country is on the verge of war and a railroad strike would be embarassing, so the judges saw the law very clearly, at least five of them did. But what did labor get. A lemon. Here-after it will be against the law to strike without permission of the employer. And that simply means slavery.

It is an historic fact that food riots have preceded revolution. The French Revolution was preceded by bread riots in Paris and other cities in France. The same is now true in Russia, although the kept press was kind enough to keep the public in ignorance. And Germany is having trouble with its people, clamoring for food. We believe it is on the verge of a revolution. We have had bread riots in New York. What deduction shall we make? Possibly we are nearer to the end of capitalistic tyranny than many dream.

Can anything be more ridiculous than dumping millions of dollars of food stuffs in the ocean when we have riots or by starving human beings for the want of a piece of bread to eat. Government is for the protection of its citizens, not only from bodily harm but also from indirect robbery and starvation. But who are protected here? The people in general or a sellected few? The President is raising heaven and earth to get protection for a few shippers while he allows thousands to starve for the want of the very goods these robbers seek to sell in foreign markets. Has the government ceased to be what its founders intended.

The news of the Russian Revolution startled the world. But it was a revolution, the like of which is not recorded in history. Instead of sorrow and destruction, the usual accompaniments of revolution, this went through amid shouts of joy and gladness, and with practically no bloodshed. [illegible] lovers of liberty, it is a token [illegible] the times have in store. We [illegible] the Russian people will ma[illegible] housecleaning that not one [illegible] the old regime remains. [illegible] did turn at last, and [illegible] low tread upon him. [illegible] of Russia have suffered [illegible] absolutism so long that [illegible] to find a single spark of [illegible]. Our only fear is that the [illegible] side in with the new adm[illegible] will prevent the people from [illegible] the full benefit of the upheaval. If the object is a more bloody war against Germany, then the revolution has been in vain. If it is a genuine effort to right the wrongs of the suffering peasants and establish a more liberal government, then it is an epochal event in history.

The following is an item taken from the St. Paul Dispatch of March 22nd:

Banks of St. Paul will co-operate with the local branch of the National Security League in the circulation of petitions throughout the Northwest for the signatures of those favoring universal military service. The campaign will start immediately with the placing of petitions in hotels, clubs and other public places for persons favoring universal military service to sign. The banks will send copies of the petition to their country correspondents for circulation.

It is the intention to collect the petitions and mail them to the national organization in Washington by April 1, when the organization is planning a big preparedness parade in that city. Petitions will be ready for distribution today or tomorrow.

With similar petitions from all parts of the country, they will be presented to Congress as a mammoth memorial favoring the enactment of the bill which provides naval or military training for every citizen at the age of 19.

There you are. The moneyed interests are going to put on the screws. You are more or less obligated to your bank. You will be asked to sign, and in order not to offend the mighty banker, they expect you will be forced to sign. Oh, this is a free country allright: But by all means do not let yourself be coerced into signing any petitirn for universal military training. You need your sons for something better. They want to teach them to obey blindly. We want men and not automotons.

What is this idea about displaying the flag? Does it represent loyalty to our country, or does it represent the amount we have been able to get out of the country? It is significant to notice that the bigger the corporation or business, the larger and more conspicuous is the flag. One is almost forced to conclude that the partiotism of some is measured by the amount of wealth they have been able to grab, or in other words the amount of protection our government has given these patriots in their operations. The munition manufacturers no doubt are displaying the flag very conspicuously, and they have abundant reason. If bloody war must come, they alone are the cause, and they alone will reap the golden harvest of bloody dollars. Patriotism should not be measured in such sordid terms. The man, who honestly strives to keep us out of war, because he beleive it is for the best of our nation, is more than the jingo who wants our best men shot to pieces in a useless and needless struggle to uphold an imaginary honor. A country's welfare is not measured in the number of men it can cause to be killed in war, but in the peace and prosperity it can give to the large mass of its citizens.

WHY NORMA LEFT

By JANE OSBORN.

It was blue Monday on the calendar for Mr. Burton Majors. The subway had taken the edge off the day, to begin with. No, earlier than that, it had been that ungrateful, unregenerate Sam Yong, who did his Oriental best to play the housewifely role in Mr. Major's uptown apartment.

Then things went wrong in the office. He jiggled the telephone impatiently for five minutes before he heard any response, and then a boy's crude tones came through to him. He was used to a girl's voice. He remembered now that it had been a voice cultivated, calm and sure in its handling of vowels and consonants.

"Why didn't anyone answer sooner?" he asked—only he did so with more emphasis.

"She's left," came back to him.

"She has left, has she? Well, why didn't the office manager know and why didn't he get another girl to take her place?"

"Sh' did tell 'im. Only he thought she was bluffin'—thought she was beefin' for more wages—on'y got six a week. But she's left all same."

"Well, why didn't the office manager let me know?" shrieked the impatient Mr. Majors. "I want that girl back. Where has she gone?"

There was a suppressed, unsteady [illegible] from the boy. "She's gone to keep [illegible] for the girls' club. That is, [illegible] fixin' up a place for them to live [illegible] sister that's in the club says [illegible]ls have to spend so much on car[illegible] they've decided to live near, and [illegible]o that there Norma, why, she said [illegible]ey'd club together and get her as [illegible]h as she was getting here she'd get [illegible] and make some place for them to [illegible] that was nearer."

[illegible] the meantime Norma had been [illegible] her six dollars a week that [illegible]rls at the club had pursed for [illegible]. She had found, blocks away, [illegible] house. Around it was a large [illegible] court. The bureau of buildings had not allowed office buildings to intrude on this space. Well, Norma had found this spot, and she had also found that through some long lease on the remainder of the estate to which the sequestered house belonged, the plot could not be disposed of for ten years more. She went to the agent and got him to quote a price for the ten years' lease. Then came the task of finding someone who would lend the girls' club the amount necessary for the first three months' rent, and the other necessary—much larger,—needed to put in the necessary improvements. One of these improvements was the erection of a trellis over the cemented courtyard, where Norma planned to grow vines. But she finally did find someone to trust her—she called in person on the richest woman she had ever heard about, and would not leave her house till the rich woman had consented to see her personally.

Mr. Majors, meanwhile, grew more and more distraught over the rasping male voice on the switchboard. Then at a directors' meeting of a charity in which his family had long been interested, he met the woman of wealth who had trusted Norma. She asked him about her, and told him of her admiration for the girl. The next day Majors went out to find her.

"I don't know just what I have come to ask you," he said as he studied the youthful figure sheathed in a coarse, all-enveloping gingham apron. "I thought at first that I could tempt you back. But now that I see what you are doing here I have another idea. This is a rattling idea of yours—this making a little garden cottage in the midst of the city. I wonder whether there aren't other places that could be transformed?"

Norma told him there were. Just that morning, she said, a real estate dealer, hearing of Norma's assistance from the well-known woman of wealth, had tried to induce her to take a lease on a similar piece of property a block away.

"You could perhaps get that place for me. I am sick to death of subways. A place like this could be made ideal."

Norma thought for a moment. "If you would pay for the time I've spent and the club a bonus, and assume all the indebtedness for this place, you could have it. I'll start the other place for the girls with the bonus from you to help clear their initial debt."

So they struck a bargain.

In two weeks the work of finishing Mr. Majors' house had been completed. Norma had bought furniture that fitted in with lines of the old house. For Norma had the innate eye of a decorator and a homemaker. She had been too full of the joy of the undertaking to realize that Mr. Majors was really more interested in the girl who furnished the house than he was in the house.

Then, when the task was completed, and Norma led him through the rooms, they stood speechless. Norma in sheer happiness over her task completed. "You see, I've had lots of troubles," Majors was telling her. "One was the voice at the end of the telephone. I couldn't get you back, so I came to you. There was the problem of the subway, and you solved that for me. I want this place to be a home, and you're the only girl I ever knew that could solve that problem for me."

And so terminated Norma's career as a furnisher of houses downtown, and so terminated Mr. Majors' desire to induce Norma to come back to be the voice at the other end of the wire.

Certificate Of Incorporation Of The American Drainage Company,

We, the undersigned, for the purpose of forming a corporation under and pursuant to the provisions of Chapter fifty-eight (58) of the General Statutes of Minnesota for 1913, any amendments thereof, do hereby associaet ourselves as a body corporate, and do hereby adopt the following Certificate of Incorporation:

ARTICLE I.

Sec. 1. The name of this corporation shall be the American Drainage Company.

Sec. 1. The general nature of the business of this corporation shall be dredging of ditches, road building, road leveling, irrigation, bridge construction, railroad grading, tile drainage, dredge building and repairing, buying and selling of dredge machinery and supplies, to own, hold and dispose of real and personal property, to buy and to sell county, state and municipal warrants and bonds, to enter into contracts for the construction of ditches, or performing any of the above named functions of this corporation, execute bonds for the faithful p formance of the contracts entered i and to do such other acts as may necessary to carry out the objects this corporation.

Sec. 3. The principal place of trans acting the business of this corporation shall be in the city of Thief Rive Falls, County of Pennington, Minnesota.

ARTICLE II.

The time for the commencement o. this corporation shall be March 15th, 1917, and the period of its duration shall be thirty years.

ARTICLE III.

The names and places of residence of the persons forming this corporation are Fred A. Blake of Thief River Falls, Minnesota, Lester E. Gesell of Thief River Falls, Minnesota, and Katharine Gesell of Thief River Falls, Minnesota.

ARTICLE IV.

Sec. 1. The management of this corporation shall be vested in a Board of Directors composed of not less than three and not more than five members.

Sec. 2. The names and addresses of the first Board of Directors are Fred A. Blake, Thief River Falls, Minnesota, Lester E. Gesell, Thief River Falls, Minnesota, and Katharine Gesell, Thief River Falls, Minnesota.

Sec. 3. The first officers of this corporation shall be: President Fred A Blake, Vice President, Katharine Gesell, and Secretary and Treasurer, Lester E. Gesell.

Sec. 4. All of the above named officers and directors shall hold their respective offices aforesaid until the next annual meeting of the corporation to be held on the first Tuesday of January, 1918, at which time and annually thereafter, a Board of Directors shall be elected from and by the stockholders of this corporation. The annual meeting of this corporation shall be held at its principal place of business on the first Tuesday in January in each year. Immediately after the election of directors, or as soon thereafter as practicable, the directors shall meet and elect from their number a president and a vice president, and from their number or from the stockholders a secretary and a treasurer. Any office except that of President and vice president may be held by one person. The directors and officers of this corporation shall hold their respective offices until their successors have been duly elected and entered upon the discharge of their duties. The first meeting of the stockholders and of the board of directors shall be held at Thief River Falls, Minnesota, on the 28th day of March, 1917, at 10 and 11 A. M. respectively.

ARTICLE V.

The amount of the capital stock of this corporation shall be Fifty Thousand ($50,000.00) Dollars, which shall be paid in, in money or property, or both, in such manner, at such times, and in such amounts as the Board of Directors shall order. The capital stock shall be divided into five hundred shares of a par value of $100.00 each.

ARTICLE VI.

The h[illegible]st amount of indebtedness or [illegible] to which this corporation [illegible] time be subject shall be [illegible]0,000 00

[illegible] whereof, we have [illegible] hands, this 10th day [illegible]

Fred A. Blake
Katharine Gesell
Lester E. Gesell

(PENNINGTON)

MILK AND BUTTERFAT FEEDS

Utilize Every Possible Morsel of Food —Teeth and Stomach Wear Out First in Cow.

Every possible morsel of food fed to dairy cows should be utilized for the production of milk and butterfat. The teeth and the stomach are the two organs of a cow which wear out first; especially the former. This is caused in great part by the cow having to eat hard dry unground grain. There is an old saying: "No chain is stronger than its weakest link." With the dairy cow also this holds true. When one organ of digestion wears out, then the whole cow is useless.

A good dairy cow should be kept as long as possible, and if she is properly fed and cared for, she will be useful for about fifteen years. Some give a nice mess of milk at the age of twenty years.

SECRET SERVICE EVER ON ALERT

Valiant Little Band of Patriots About Whose Achievements Little Is Known.

MEANS HEROISM UNREQUITED

Government Agents Live Lives That for Adventure and Daring Deeds Make "Best Seller" Look Like Tarnished Imitation.

New York.—Coincident with the discovery of the Zimmermann note, which disclosed the far-reaching plans of Germany to foment trouble in every part of the globe, and the subsequent refusal of Secretary of State Lansing to disclose how the note was obtained, because it would "endanger lives," comes a brief press dispatch from Juarez, Mex., announcing the theft of "important papers" from the German consulate there.

To the average reader the Juarez dispatch may seem unimportant, yet in all probability it is merely another link forged in the great chain of unknown achievements of our valiant little band of patriots who throughout the entire world are always on the alert in the interest of our country, yet who in time of danger cannot call on us for aid.

This little band of men, who are known only to the state department, and whose names appear in the secret archives of the United States as "A-41" or "C-2175," live lives that for adventure and heroism make the average "best seller" hero look like a tarnished imitation.

So little is known by the general public of the secret agents of our government that to the average person it seems probable no such body of men exists. As a matter of fact, the vast majority of the citizens of the country seem to think the secret service, which in reality is attached to the treasury department, is entrusted with diplomatic work of the "underground" order. This, however, is not the case. Although it is the duty of the secret service and department of justice operatives to run down plots of different kinds that are brewing almost continually within the confines of our own borders, they seldom are sent out of the country.

Busy in All Lands.

In far off Russia, in China, Japan, Germany, France, England, South America, and, in fact, every inhabited part of the globe, there flits the diplomatic phantom, the "secret agent."

How many times he has intercepted just such documents as the Zimmermann note will probably never be known outside of diplomatic circles, but this particular feat is a good example of the work done by these "watchdogs of the mist." Using fictitious names and numbers, I will outline their work.

When the war broke out in Europe, broke with all the suddenness of a furious thunderstorm, it was no surprise to those engaged in the great game of "dodging death." In Berlin a dapper youth of decided Teutonic appearance, listed under our own banner as "B-45," was fully alive to what was doing.

On the Russian border Ivan Muscovitz, whose reports were signed with another number and letter, straightway informed Washington of the Russian preparations, while in France and England Andre Le Rene and Cyril Frothingham, respectively, reported the doings of these two great nations.

The youth of Teutonic appearance is killed by a taxicab. Plainly an accident, you would say if you had witnessed the incident, yet the taxicab had followed the Teutonic youth many blocks and was in all probability driven by a decrepit old chauffeur, who is known to Wilhelmstrasse as X-997,-681, and who had received notification of the Teutonic youth's activity in the vicinity of some district of military importance.

So died the Teutonic youth. On the register at Washington "B-45" is crossed off as dead and "B X" rushes from Dresden to take his place. The Teutonic youth is an American, born and raised, fighting to protect his country, but, even knowing that his life is in continual danger, he can make no appeal for aid. He has done his duty; he is dead.

Dies in Line of Duty.

In Mexico City recently a well-known and devoted servant of the United States, well known because of his undying love for his country and his splendid nerve, was killed in a street fight. Killed because he was about to uncover things which were better kept under cover, in the opinion of the Mexican government.

His friends knew why he was killed, they knew he had been in the shadow of death many times, but only his intimates knew why he persisted in taunting the grim reaper to come get him.

A "secret agent" is a secret agent in all that the word implies. He must serve his country in silence. He may do braver deeds than those accomplished by the soldier or sailor in battle, but the world cannot know of them. No decoration graces his breast, no honors are thrust upon him by an admiring public, yet he continues on his perilous way doing his duty, a man without a country, [illegible] to the nation, but yet one whom the nation cannot recognize.

If he is killed, his death is often avenged by one of his fellow agents for many friendships are formed not alone between men of his own national corps, but with those of other nations with whom he must necessarily work.

Often French, American and British secret agents work hand in hand. The Frenchman may discover while doing some work for his own government that there is a plot being hatched for a German invasion of the United States through Mexico. He passes the information along to the British and American agents.

Suddenly a fleet of British and American warships get sailing orders. They depart, "destination unknown." There is no invasion.

Help Each Other.

The American may uncover a message of vast importance to France. His friend, Paul Ledoque, has worked often with him. Paul shall know.

And so it goes on, the never-ceasing state of activity throughout the world; men come and go, come full of the enthusiastic desire to do for the best interests of the nation, and go by the more violent, yet expected route of "sudden death."

Unknown, unhonored and unrewarded, they play with death as you play with your own particular amusement, accomplish their ends by any means in their power, yet guarding the nation from more dangers than you ever dreamed could exist.

Not a particularly clean game, for it involves theft, assault and battery and often deliberate murder, but necessary to the preservation of law and order throughout the world and just as honorably enacted as the killing of men in battle.

They are the "watchdogs of the mist" and they flit in and out of this world of strife like so many fireflies. A flicker here, a flicker there, then the light goes out forever. Heroes unrewarded.

TRAVELS FAR TO WED

Miss Goldie Collins, who recently became the bride of Beaumont Alexander in New York, traveled all the way from Australia to meet her husband. The photograph was taken on her arrival at New York after spending seven weeks braving the perils of war zones and submarines.

HUTS FOR BRITISH SOLDIERS

New Invention in Use at the Front in France to Shelter the Troops.

Toronto.—A recent invention adding to the comfort of the British and Canadian forces at the French front is described in a dispatch received here from London. It is known as the Nissen hut, a semicircular shelter with the appearance of a big piece of stovepipe, half buried in the earth, and containing doors and windows. There is room for 25 men in each hut. The convenience of transportation and the speed with which they can be erected enable men hitherto forced to sleep in the open during an advance to obtain shelter.

The event of the week at the Canadian army headquarters at the French front, according to the dispatch, was a visit by Sir Robert Borden, Canadian premier, and Robert Rogers and J. D. Hazen, members of the premier's cabinet. The famous First brigade of the Dominion's original division passed in review.

VIEW HEARSE WITH DISTRUST

English Farmers Prefer Ordinary Wagons for Coffins at Funeral Services.

London.—The hearse, although by no means a modern invention, has not yet penetrated into some of the remote country districts of England. The coffin of the late duke of Norfolk when it arrived from London at his country estate at Arundel was not put in a hearse, for none was available there, but according to custom was placed in an ordinary farm wagon and drawn by four horses to the castle.

In many parts of agricultural England the use of a hearse is regarded with distrust, the farmers' theory being that "the Lord's harvest when gathered should be carr[illegible] in [illegible] harvest."

Certificate Of Incorporation Of The American Drainage Company,

We, the undersigned, for the purpose of forming a corporation under and pursuant to the provisions of Chapter fifty-eight (58) of the General Statutes of Minnesota for 1913, any amendments thereof, do hereby associate ourselves as a body corporate, and do hereby adopt the following Certificate of Incorporation:

ARTICLE I.

Sec. 1. The name of this corporation shall be the American Drainage Company.

Sec. 1. The general nature of the business of this corporation shall be dredging of ditches, road building, road leveling, irrigation, bridge construction, railroad grading, tile drainage, dredge building and repairing, buying and selling of dredge machinery and supplies, to own, hold and dispose of real and personal property, to buy and to sell county, state and municipal warrants and bonds, to enter into contracts for the construction of ditches or performing any of the above named functions of this corporation, execute bonds for the faithful performance of the contracts entered in and to do such other acts as may necessary to carry out the objects of this corporation.

Sec 3. The principal place of transacting the business of this corporation shall be in the city of Thief River Falls, County of Pennington, Minnesota.

ARTICLE II.

The time for the commencement of this corporation shall be March 15th, 1917, and the period of its duration shall be thirty years.

ARTICLE III.

The names and places of residence of the persons forming this corporation are Fred A. Blake of Thief River Falls, Minnesota, Lester E. Gesell of Thief River Falls, Minnesota, and Katharine Gesell of Thief River Falls, Minnesota.

ARTICLE IV.

Sec. 1. The management of this corporation shall be vested in a Board of Directors composed of not less than three and not more than five members.

Sec. 2. The names and addresses of the first Board of Directors are Fred A. Blake, Thief River Falls, Minnesota, Lester E. Gesell, Thief River Falls, Minnesota, and Katharine Gesell, Thief River Falls, Minnesota.

Sec. 3. The first officers of this corporation shall be: President Fred A Blake, Vice President, Katharine Gesell, and Secretary and Treasurer, Lester E. Gesell.

Sec. 4. All of the above named officers and directors shall hold their respective offices aforesaid until the next annual meeting of the corporation to be held on the first Tuesday of January, 1918, at which time and annually thereafter, a Board of Directors shall be elected from and by the stockholders of this corporation. The annual meeting of this corporation shall be held at its principal place of business on the first Tuesday in January in each year. Immediately after the election of directors, or as soon thereafter as practicable, the directors shall meet and elect from their number a president and a vice president, and from their number or from the stockholders a secretary and a treasurer. Any office except that of President and vice president may be held by one person. The directors and officers of this corporation shall hold their respective offices until their successors have been duly elected and entered upon the discharge of their duties. The first meeting of the stockholders and of the board of directors shall be held at Thief River Falls, Minnesota, on the 28th day of March, 1917, at 10 and 11 A. M. respectively.

ARTICLE V.

The amount of the capital stock of this corporation shall be Fifty Thousand ($50,000.00) Dollars, which shall be paid in, in money or property, or both, in such manner, at such times, and in such amounts as the Board of Directors shall order. The capital stock shall be divided into five hundred shares of a par value of $100.00 each.

ARTICLE VI.

The hi[illegible] st amount of indebtedness or [illegible] to which this corporation [illegible] time be subject shall be [illegible]0,000 00

[illegible] whereof, we have [illegible] hands, this 10th day [illegible]

Fred A. Blake
Katharine Gesell
Lester E. Gesell

PENNINGTON)

CIVIL ENGINEER

Copyright by Fleming H. Revell Company

SYNOPSIS.

CHAPTER I—Bertram Meade is consulting engineer representing his father, the great Meade, who is the designer of the International bridge, the greatest cantilever structure the world has ever heard of. In the shadow of the uncompleted bridge young Meade receives Colonel Illingworth, president of the Martlet Bridge company, the constructors, and the colonel's daughter, Helen, whom he loves.

CHAPTER II—At dinner the possible weakness of the compression members of the bridge is talked of and Meade defends his father's calculations.

CHAPTER III—Meade and Helen go out upon the bridge in the moonlight and Helen narrowly escapes a fall to the river below. Meade tells his love and they go to the colonel, who approves their marriage when the bridge is finished.

CHAPTER IV—Abbott, the construction engineer, tells Meade there is a deflection in member C-10-R, but makes light of it. Meade, after vainly trying to stop the work, wires his father and follows the telegram to New York.

CHAPTER V—At the great engineer's office father and son try to prevent disaster, but young Meade only reaches Colonel Illingworth as a message comes that the bridge, with 150 men, is in the river.

CHAPTER VI—Abbott goes on with the work, ignoring Meade's protests, but while uneasily inspecting C-10-R the lacings snap under his eyes and he goes into eternity with the other men on the falling bridge.

CHAPTER VII—Young Meade has pointed out to his father the possible weakness, but his objections have been overruled. His father now prepares a statement showing his own fault and sends his secretary, Shurtliff, to the Gazette with it.

CHAPTER VIII—Young Meade, on his return, meets Rodney, an old college friend, and other reporters at the door of his father's office. He finds his father dead from heart failure. He assumes entire responsibility for the catastrophe. Shurtliff, who has not obeyed orders, but concealed the papers the dead man had given him to make public, also accuses the younger Meade.

CHAPTER IX.

The Unaccepted Renunciation.

The doctor and the officers of the law entered the outer office. In spite of the brave words that had been spoken by the woman, the man could only see a long parting and an uncertain future. He realized it the more when old Colonel Illingworth entered the room in the wake of the others. After he had recovered himself he had hurried to the station in time to catch the next train and had come to New York, realizing at once where his daughter must have gone.

"My father is dead," said Meade as the doctor and the officers of the law examined the body of the old man. The son had eyes for no one but the old colonel. "The failure of the bridge has broken his heart; my failure, I'd better say."

"I understand," said Illingworth. "He is fortunate. I would rather have died than have seen any son of mine forced to confess criminal incompetency like yours."

"Father," said the girl with a resolution and firmness singularly like his own. "I can't hear you speak this way, and I will not."

"Do you go with him or do you not?" thundered the colonel.

It was Meade who answered for her. "She goes with you. I love her and she loves me, but I won't drag her down in my ruin."

"I am glad to see honor and decency are in you still," said the colonel, "even if you are incompetent."

"If you say another word to him I will never go with you as long as I live," flashed out Helen Illingworth.

"I deserve all that he can say. Your duty is with him. Good-by," said Meade.

"And I shall see you again?"

"Of course. Now you must go with your father."

Helen Illingworth turned to the colonel.

"I shall go with you because he bids me, not because—"

"Whatever the reason," said the old soldier, "you go." He paused a moment, looking from the dead man to the living one. "Meade," he exclaimed at last, "I am sorry for your father, I am sorry for you. Good-by, and I never want to see you or hear of you again. Come, Helen."

The woman stretched out her hand toward her lover as her father took her by the arm. Meade looked at her a moment and then turned away deliberately as if to mark the final severance.

With bent head and beating heart, she followed her father out of the room. There he had to fight off the reporters. He denied that his daughter was going to marry young Meade. She strove to speak and he strove to force her to be quiet. In the end she had her way.

"At Mr. Meade's own request," she said finally, "our engagement has been broken off. Personally I consider myself as much bound as ever, but in deference to his wishes and to my father's—"

"Have you said enough?" roared the colonel, losing all control of himself at last. "No! I will not be questioned or [illegible] another minute. Come."

He almost dragged the girl from the room.

Within the private office the physician said that everything pointed to a heart lesion, but only an autopsy would absolutely determine it. Meanwhile the law would have to take charge of the body temporarily. It was late at night before Bertram Meade and old Shurtliff were left alone. Carefully seeing that no one was present in the suite of offices Meade turned to Shurtliff.

"Get me that memorandum I wrote to my father. You know where he kept it."

"Yes, sir, separate from the other papers concerning the International, in the third compartment." He turned the big safe door slowly. The third compartment was empty. "It's gone," he said.

Meade went to the safe, a small one, and examined it carefully and fruitlessly. His letter was not there with the other papers, where it should have been if it were in existence. It was not anywhere.

"Father told me he was going to destroy it, but I rather thought he was keeping it to have some fun with me when the bridge was completed," he said at last.

"Yes, sir, that was his intention. In fact, I know he did not destroy it at first. He told me to file it with the plans. He must have destroyed it later. I haven't looked in this compartment for weeks."

"I'll never forget the lie you told to back me up, Shurtliff. I can see you loved him as much as I."

"No one will ever know the truth from me, sir. You saved your father's name and fame."

"I think we had better search the office now. I wouldn't have that paper come to life for the world," said Meade.

Shurtliff was the most orderly of men. The care of the old engineer's papers and other arrangements had devolved upon him. The search was soon completed.

"I guess he must have destroyed it," said the young man, "but to be sure I will examine his private papers at home. Good night. You will be going yourself?"

"In a few minutes, sir."

"Come to me in the morning after the autopsy and we will arrange for the funeral," said the younger man as he left the office.

Shurtliff waited until his footsteps died away in the hall. He waited until he heard the clang of the elevator gate. Even then he was not sure. He got up and in his catlike way opened the door of the office and peered down the hall. It was empty. He stood in the door waiting, while the night elevator made several trips up and down without pausing at that floor. He sat down at the dead man's desk. From his pocket he drew forth a packet of papers.

* * * * * * * *

There were no legal proceedings, although there were many inquests at the bridge. The cause of the failure was clear. It was recognized by every one, whose opinion was worth considering, that the disaster had resulted from a mistake which any engineer could have made. As a matter of fact there was no experience to guide the designers. There never had been such a bridge before. Certain elements of empiricism had to enter into their calculations. They had made the plan after their best judgment and it had failed. They could be blamed; even vilified as they were in the press, but that was the extent of their punishment.

The bitter weight of censure fell entirely upon Bertram Meade. His ruin as an engineer was immediate and absolute. He was the scapegoat. No one had any good to say of him except Rodney, who fought valiantly for his friend and classmate, at least striving to mitigate the censure by pointing out the quick and ready acknowledgment of the error which might have been ascribed to the dead man without fear of contradiction.

An effort was made by competitors and stock speculators to ruin the Martlet Bridge company. By throwing into the gap their private fortunes to the last dollar and by herculean work on the part of their friends, the directors saved the Martlet company, although its losses were tremendous and almost insupportable, not only in money, but in prestige and reputation. Colonel Illingworth came out of the struggle older and grayer than ever. The terrific combat had left him almost broken for a time, and his daughter saw that it was not possible even to mention Bertram Meade to him, then.

The funeral of the great engineer had been strictly private. Only his confreres, men who stood high in scientific circles, certain people for whom he had made great and successful designs, a few others whose ties were personal, had been invited to the house for the services. The interment was in the little Connecticut town of Milford, in which the older Meade had been born, and from which he had gone forth as a boy to conquer the world.

"Shurtliff," said the young engineer, after the mound had been heaped up and covered with sods and strewn with flowers and the workmen had gone, "I have left everything I possess in your charge. You have a power of attorney to receive and pay out all moneys; to deposit, invest, and carry on my father's estate. The office is to be closed and the house is to be sold. My will, in which I leave everything to Miss Illingworth, is in your hands. You are empowered to draw from the revenue of the estate your present salary so long as you live. If anything happens to me you will have the will probated and be governed accordingly."

"Mr. Meade," said the old man, and he somehow found himself transferring the affection which he had thought had been buried beneath the sod on that long mound before him, to the younger man. He had loved and served a Meade all his life and he began to see that he could not stop now, nor could he lavish what he had to give merely on a remembrance, "Mr. Meade," he said, "where are you going and what do you intend to do?"

"I don't know where I shall go, or what I shall undertake eventually," said the man. "I'm going to leave everything behind now and try to get a little rest at first."

"And you will keep me advised of your whereabouts?"

"Perhaps—I don't know. One last injunction: you are not to tell anyone the truth."

"God forbid," said Shurtliff, "we have lied to preserve the honor and fame of him we loved who lies here."

"Don't render our perjuries of non-effect."

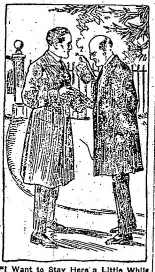
"I will not, sir. I haven't found that paper. I guess it was destroyed."

"I presume so. And now, good-by."

"Aren't you coming with me?"

"I want to stay here a little while by myself."

Shurtliff turned and walked away. When he reached the road, down which he must go, he stopped and faced about again. Meade was standing where he had been. The old man took off his hat in reverent farewell.



"I Want to Stay Here a Little While by Myself."

Meade was not left alone. Beyond the hillside where his father had been buried rose a clump of trees. [illegible] grew at their feet. A woman—[illegible] man be buried without woman[illegible] —had stood concealed there[illegible] Helen Illingworth had wept[illegible] Meade[illegible] dreariness, the mournfulness[illegible] She had hoped that Meade[illegible] after the other went and[illegible] was alone she came to him[illegible] her hand upon his arm. He [illegible] looked at her.

"I knew that you would be [illegible] said.

"Did you see me?"

"I felt your presence."

"Listen," said the woman. "You are wrecking your life for your father's fame. A man has a right perhaps to do with his own life what he will, but, when he loves a woman and when he has told her so and she has given him her heart, did it ever occur to you that when he wrecks his life he wrecks hers, and has he a right to wreck her life for anyone else?"

"Oh, my God," said Meade, "this is more than I can bear."

"I don't want to force you to do anything you don't want to do and you are not in any mood to discuss these things," she said in quick compassion. "Some day you will come back to me."

He stretched out his hands toward her over the grave.

"I don't know," he cried. "I dare not hope."

"With love like ours," she answered, "all things are possible."

"I can't bind you. You must be free," he said slowly, turning his head.

"You are breaking my heart, but I shall live and fight on for love and you."

"God bless you."

"You are going away?" she asked at last.

"I must break with everything. I must give you your chance of freedom."

"Very well," said the woman. "Now hear me. You can't go so far on this earth or hide yourself away so cunningly but that I can find you and maybe follow you. And I will. Now, I must go. I left my car down the road yonder. Will you go with me?"

The man shook his head and knelt down before her suddenly and caught her skirt in his grasp. His arms swept around her knees. She yielded one hand to the pressure of his lips and laid the other upon his head.

"Go now," he whispered, "for God's sake. If I look at you I must follow."

CHAPTER X.

The New Rodman.

There are no more beautiful valleys anywhere than those cut by the waters of primeval floods through the foothills of the great snow-covered Rocky mountains. The erosions and washings of untold centuries have flung out in front of the granite ramparts of succession of lower elevations like the bastions of a fortress. At first scarcely to be distinguished from the main range in height and ruggedness these ravelins and escarpments gradually decrease in altitude and size until they turn into a series of more or less disconnected, softly rounded hills, like outflung earthworks, finally merging themselves by gradual slopes into the distant plains overlooked by the great peaks of the mountains.

The monotony of these pine-clad, wind-swept slopes is broken even in the low hills by out-thrustings of stone, sometimes the hard igneous rock, the granite of the mountains, more frequently the softer red sandstone of a period later, yet ineffably old. These cliffs, buttes, hills and mesas have been weathered into strange and fantastic shapes which diversify the landscape and add charm to the country.

The narrow canons in which the snow-bed streams take their rise gradually widen as the water follows its tortuous course down the mountains through the subsiding ranges and out among the foothills to the sandy, arid, windy plains beyond. At the entrance of one of the loveliest of these broad and verdant valleys, a short distance above its confluence with a narrower, more rugged ravine through the hills, lay the thriving little town of Coronado.

Some twenty miles back from the town at a place where the valley was narrowed to a quarter of a mile, and separating it from the paralleling ravine, rose a huge sandstone rock called Spanish Mesa. Its top, some hundreds of feet higher than the tree-clad base of the hills, was mainly level. From its high elevation the country could be seen for many miles, mountains on one hand, plains on the other. It stood like an island in a sea of verdure. Little spurs and ridges ran from it. Toward the range it descended and contracted into a narrow saddle, vulgarly known as a "hog-back," where the granite of the mountains was hidden under a deep covering of grass-grown earth, which formed the only division between the valley and the gorge or ravine, before the land, widening, rose into the next hill.

The people came from miles away to see that interesting and curious mesa, much more striking in its appearance than Baldwin's knob, the last foothill below it. Transcontinental travelers even broke journey to visit it. The town prospered accordingly, especially as it was admirably situated as a place of departure for hunters, explorers, prospectors and adventurers, who sought what they craved in the wild hills. There were one or two good hotels for tourists, unusually extensive general stores of the better class, where hunting and prospecting parties could be outfitted, and the high-living, extravagant cattle ranchers could get what they demanded. Besides all these there were the modest homes of the lovers of the rough but exhilarating and health-giving life of the Rocky mountains. Of course there were nu[illegible] saloons and gambling halls, [illegible] town was the haunt of cow-[illegible]aters, miners, Indians—the old [illegible] with a few touches of civilization[illegible]

[illegible] was left of the river, which [illegible]ade the valley—and during the [illegible]ent periods of rain too brief to [illegible]wn as the rainy season, it really [illegible] to the name of river—flowed [illegible] through the town, when it [illegible] all, under the name of Picket [illegible] When the railroad came the [illegible] Wire had been first studied in th[illegible] of finding a practicable way over the mountains, but the ravine on the other side of the mesa had been found to offer a shorter and more practicable route. And, by the way, this ravine, taking its name from the little brook far down in its narrows was known as the "Kicking Horse."

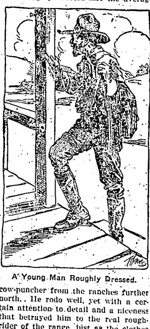
So the railroad ran up the ravine and the Picket Wire was left still virgin to the assaults of man. But the day came when it was despoiled of its hitherto long standing, unravished innocence. Shouts of men, cracking of whips trampling of horses, groaning of wheels, wordless but vocal protests of beasts of burden mingled with the ringing of axes, the detonations of dynamite. The whistle of engines and the roar of steam filled the valley. Under the direction of engineers, a huge mound of earth arose across its narrowest part, nearest a shoulder, or spur, of the mesa reaching westward. No more should the silver Picket Wire flow unvexed on its way to the sea. It was to be dammed.

All that the huge, hot inferno of baked plain, where sage brush and buffalo grass alone grow, needed to make it burgeon with wheat and corn was water. The little Picket Wire, which had meandered and sparkled and chattered on at its own sweet will was now to be held until it filled a great lakelike reservoir in the hills back of the new earth dam! Then through skillfully located irrigation ditches the water was to be given to the millions of hungry little wheatlets and cornlets which would clamor for a drink. The fierce sun was no longer to work its unthwarted will in burning up the prairie.

With the promise of water on the plain beyond, Coronado sprang into newer and more vigorous life. In the language of the West it "boomed." The railroad had been a forlorn branch running up into the mountains and ending nowhere. Its first builders had been daunted by difficulties and lack of money, but as soon as the great dam was projected, which would open several hundred thousand acres for cultivation and serve as an inspiration in its practical results to other similar attempts, people came swarming into the country buying up the land, the price for acreage steadily mounting. The railroad accordingly found it worth while to take up the long-abandoned construction work of mounting the range and crossing it. Men suddenly observed that it was the shortest distance between two cardinal points, and one of the great transcontinental railways bought it and began improving it to replace its original rather unsatisfactory line.

The long wooden trestle which crossed the broad, sandy depression in front of the town, the bed of the ancient river, through which the Picket Wire and further down its affluent, the Kicking Horse, flowed humbly and modestly, was being replaced by a great viaduct of steel. Far up the gorge past the other side of the Spanish Mesa another higher trestle had already been replaced by a splendid steel arch. A siding had been built near the ravine, a path made to the foot of the mesa, and arrangements were being made to run a local train up from the town when all was completed to give the people an opportunity to ride up the gorge and see the great pile of rock, on which enterprise was already planning the desecration of a summer hotel, the blasphemy of an amusement park!

Up the valley of the Picket Wire one morning in early fall came a young man roughly dressed like the average cow-puncher from the ranches further north. He rode well, yet with a certain attention to detail and a niceness that betrayed him to the real rough-rider of the range, just as the clothes he wore, although they were the ordinary cattleman's outfit, were worn in a little different way that again betrayed him. One look into the face of the man, albeit his mustache and beard hid the revealing outlines of mouth and chin, sufficed to show that here was no ordinary cow-puncher. He rode boldly enough among the rocks of the trail and along the rough road, which had been made by the wheels of the wagons and hoofs of the horses. There was about him some of the quiet confidence begot of achievement, some of the power which knowledge brings and which success emphasizes, yet there were uncertainty and hesitation, too, as if all had not been plain sailing on his course.



A Young Man Roughly Dressed.

To be the resident engineer charged with the construction of a great earth dam like that across the Picket Wire, requires knowledge of a great many things beside the technicalities of the profession, chief among them being a knowledge of men. As the newcomer threw his leg over the saddle-horn, stepped lightly to the ground, dropping the reins of his pony to the soil at the same time, Vandeventer, the engineer in question, looked at him with approval. Some subtle recognition of the man's quality came into his mind. Here was one who seemed distinctly worth while, one who stood out above the ordinary applicant for jobs who came in contact with Vandeventer, as the big mesa rose above the foothill. However, the chief kept these things to himself as he stood looking and waiting for the other man to begin:

"Are you the resident engineer?" asked the newcomer quietly, yet there was a certain nervous note in his voice, which the alert and observant engineer found himself wondering at, such a strain as might come when a man is about to enter upon a course of action, to take a strange or perilous step, such a little shiver in his speech as a naked man might feel in his body before he plunged into the icy waters of the wintry sea.

"I am."

"I'd like a job."

"We have no use for cow-punchers on this dam."

"I'm not exactly a cow-puncher, sir."

"What are you?"

"Look here," said the man, smiling a little, "I've been out in this country long enough to learn that all that it is necessary to know about a man is 'Will he make good?' Let us say that I am nothing and let it go at that."

"Out of nothing, nothing comes," laughed the engineer, genuinely amused.

Some men would have been angry, but Vandeventer rather enjoyed this.

"I didn't say I was good for nothing," answered the other man, smiling in turn, though he was evidently serious enough in his application.

"Well, what can you do? Are you an engineer?"

"We'll pass over the last question, too, if you please. I think I could carry a rod if I had a chance and there was a vacancy."

"Umph," said Vandeventer, "you think you could?"

"Yes, sir. Give me a trial."

"All right, take that rod over there and go out on the edge of the dam where that stake shows, and I'll take a sight on it."

Now there are two ways—a hundred perhaps—of holding a rod; one right way and all the others wrong. A newcomer invariably grasps it tightly in his fist and jams it down, conceiving that the only way to get it plumb and hold it steady. The experienced man strives to balance it erect on its own base and holds it with the tips of his fingers on either side in an upright position, swaying it very slightly backward and forward. He does it unconsciously, too.

Vandeventer had been standing by a level already set up when the newcomer arrived and the rod was lying on the ground beside it. The latter picked it up without a word, walked rapidly to the stake, loosened the target, and balanced the rod upon the stake. As soon as Vandeventer observed that his new seeker after work held the rod in the right way, he did not trouble to take the sight. He threw his head backward and raised his hand, beckoningly.

"It so happens," he began, "that I can give you a job. The rodman next in line of promotion has been given the level. One of the men went East last night. You can have the job, which is—"

"I don't care anything about the details," said the man quickly and gladly. "It's the work I want."

"Well, you'll get what the rest do," said Vandeventer. "Now, as you justly remarked, I have found that it is not polite out here to inquire too closely into a man's antecedents and I have learned to respect local customs, but we must have some name by which to identify you, make out your pay check and—"

"Do you pay in checks?"

"No, but you have to sign a check."

"Well, call me Smith."

Vandeventer threw back his head and laughed. The other man turned a little red. The chief engineer observed the glint in his new friend's eye.

"I'm not exactly laughing at you," he explained, "but at the singular lack of inventiveness of the American. We have at least thirty Smiths out of two hundred men on our pay roll, and it is a bit confusing. Would you mind selecting some other name?"

"If it's all the same to you," announced the newcomer amusedly—the chief's laughter was infectious—"I'm agreeable to Jones, or Brown, or—"

"We have numbers of all of those, too."

"Really," said the man hesitatingly, "I haven't given the subject any thought."

"What about some of your family names?"

"That gives me an idea," said the newcomer, who decided to use his mother's name, "you can call me Roberts."

"And I suppose John for the prefix?"

"John will do as well as any, I am sure."

"We have about fifty Johns. Every Smith appears to have been born John."

"How did you arrange it?" asked the other with daring freedom, for a rodman does not enter conversation on terms of equality with the chief engineer.

"I got a little pocket dictionary down at the town with a list of names and I went through that list with the Smiths, dealing them out in order. Well, that will do for your name," he said, making a memorandum in the little book he pulled out of his flannel shirt pocket. He turned to a man who had come up to the level. "Smith," he said—"by the way this is Mr. Claude Smith. Mr. Roberts—here's your new rodman. You know your job, Roberts. Get to work."

And that is how Bertram Meade, a few months after the failure of the great bridge, once again entered the ranks of engineers, beginning, as was necessary and inevitable, very low down in the scale.

(TO BE CONTINUED.)

TROUBLE WITH CALF SCOURS

Overfeeding, Sour Milk Pails and Irregularity in Feeding Are Usually the Causes.

Probably the greatest difficulty with which the calf feeder has to contend is scours. Overfeeding, sour milk pails, cold water and irregularity in feeding are usually the causes, says a writer in Field. As soon as signs of scours are noticed it is recommended that the milk be reduced to one-half, and that a teaspoonful of dried blood be added to the milk fed. No dried blood that has not been thoroughly sterilized should be used. In severe cases of scours, the addition of one or two eggs with the dried blood has been found to be very effective. In severe cases it is recommended that the calf be given one or two ounces of castor oil in the morning which is followed in about 12 hours by 15 drops of laudanum and a teaspoonful of dried blood.

CLEANLINESS IN DAIRY BARN

Two Hours Should Elapse After Feeding, Bedding or Brushing Before Milking Is Begun.

Feeding, bedding or brushing up should never take place within two hours before milking. The dust raised by these operations takes a long time to settle, and if these operations are conducted shortly before milking a very considerable quantity will of necessity find its way into the milk cans and pails.

For this reason, also, uncovered cans and pails, with or without milk in them, should never be left standing in the barn, [illegible] should be removed to the milkhouse where the air is clean.

Edwin N. Olson lost one of his geese the other night.

Henry Tellefson was over to O. Peterson's last Sunday.

John Happy is now back from the hospital and is feeling fairly well.

"Kindling The Hearth Fire"

"Kindling The Hearth Fire" a play in three acts will be presented by members of the Goodridge Literary Society, in the school house Friday evening, April 13th. This play is expected to be a winner, so remember the date and be there.

The following is the cast of characters:

Mrs. Field, An overworked Farmers' wife, Stella Arntz
Ned, her young son, Roy Olson
Doris, her daughter, Miss Ellen Gunnerson
Mrs. Stringer, a borrowing neighbor, Miss Hilda Christianson
Mr. Hortwell, A Graduate of the Agricultural College, Henry Rockne
Mr. Field, A prosperous Farmer, Sam Rouze
Dave Dalton, A farmer, who "owns his own farm". Alfred Tvedt
Ida Johnson, Clerk in a department store, Irene Ferdinandsen
Mrs. Ryon, The manager of a lodging house, Mrs. McDonald
Mr. Bond, A man with money, Harry Van Tassel
Miss Brooks, A visiting housekeeper for the Welfare League, Miss Teresa Giefer
Pete, Olaf, Hired Men, Hugo Menzel and Alvin Rottke.

Ten Are Granted Full Citizenship

A special session of district court was held in this city Tuesday to consider applications for citizenship. Twelve applications were on file and of these ten were granted papers, while two were continued over to a term to be held on July 26.

Following is a list of those admitted to citizenship, giving the country of their birth and present place of residence: Amund Gunnarson Moy, Norway, Rhoda; Thomine Amundson Groven, Norway, Ruddell; Lars Stomlien, Norway, Goodridge; Bernt Halseth, Norway, St. Hilaire; Knut Torgersen Roisland, Norway; Erie; Axel Harold Anderson, Sweden, Thief River Falls; John Ausum, Canada, Thief River Falls; Nils Sever Lien, Norway, Erie; Knut Thompsen Berg, Norway, Erie; Edward Henry Nilsen, United States, Canada.—Thief River Falls Times.

Estimate is Filed on Cost Of Ditch.

Engineer George W. Walker, in charge of the preliminary work on proposed judicial ditch No. 39 of Pennington, Beltrami and Marshall counties, has filed his estimate of costs, and finds that these will total $292,033.93. Included in this is the sum of $25,931.69 which the government is expected to pay for benefits to reservation lands by reason of laterals constructed. If this money is not forthcoming these laterals will not be put in and this amount will be deducted from the above total.

According to Mr. Walker's figures, the excavation work will total 1,908,722 cubic yards. At ten cents per yard this amounts to $190,872.24 and is naturally the big item of expense. Clearing the right-of-way will increase this by $2,331.69, while 124 miles of road construction will cost $12,976 Bridges and culvert are estimated at 50,000 and the expenses incidental to removing old bridges and culverts is placed at $12,953.99. The expense or administration, which includes engineers', viewers, and attorneys' fees, the expense of publication auditors' fees and all other items connected with the preliminary work, is estimated at $20,000.

Through the construction of laterals certain sections of the Red Lake reservation will be greatly benifitted by the proposed ditch and the court has requested the Indian department to appropriate $38,000 as a proper share for these benefits.—Thief River Falls Times.

C. N. to Build.

Announcement was made Wednesday that the Canadian Northern Railway intended to build south to the Twin Cities as soon as the war was over. It has been well known for sometime that the Canadian Northern had secured financial control of the Minneapolis and St Louis Railway and had thus gained entrance to Minneapolis. On Wednesday the deal which has been pending for some time was concluded by which the Canadian Northern bought right of way into St. Paul. The lands purchased run parallel to the tracks of the Northern Pacific as it enters the Saintly City.

As the little birds whisper it the C. N. is to cross the Beaudette river at this point and go south to the Twin Cities with a branch line running east from Spooner to connect with the Duluth line near Orr on the Duluth, Winnipeg and Pacific which is a subsidiary line of the Canadian Northern

At the time of the construction of the bridge across Beaudette Bay last winter it was rumored that the line would be extended and the manner of construction of that structure was evidence that the company intended to use it for other purposes than simply for the local spur.

But owing to the excessive cost of steel and equipment at this time, the company has been forced to await the close of the war before undertaking any further extensions.

The building of this line will mean a great deal to this village as we understand that trackage for a division point will be laid on the east side of the river and the offices will be located here, besides it will give us the long looked for route direct to the Twin Cities.—Northern News.

NEW FACE FOR BURNED BOY

Clever Chicago Surgeon Constructs New Features for Youthful Victim of Fire.

Chicago.—A clever surgeon has made new ears for Mike Montiferro, eight years old. He has made new eyelids for him, eyelids that will wink and shut. He has made new lips for him, lips which it is hoped will have learned how to kiss before Mike is taken back to his home at Miles City, Mont. Mike is in Augustana hospital and rapidly getting better.

Mike's father is a railroad laborer, his mother "works out" part of the time to fatten the family purse. They have been in the habit of leaving Mike in charge of his younger brothers and sisters. He didn't know how to manipulate a new stove and it exploded. Mike saved his little sister, but his face was terribly burned. Parts of the flesh were crisped and as the wounds healed the skin grew tight about the boy's eyes and ears and mouth. So the doctors out in Montana sent Mike to Chicago for the operations which would restore his face to him.

SONG WRITER WON IN HURRY

Bridgeport Dentist Met Miss Owen Thursday and They Wed on Monday.

Bridgeport, Conn.—Solomon Grundy, who was born on Monday, christened on Tuesday, and so on throughout the week to his funeral on Sunday, had nothing on Dr. A. G. Jones, dentist, of this city, who on Thursday met Miss Anita Owen, composer of "Daisies Won't Tell," "Dreamy Eyes," and other song hits whistled along Broadway several years ago.

After the meeting on Thursday in New York, Doctor Jones invited Miss Owen to a dance here Friday night. On Saturday he proposed, on Sunday he was accepted and on Monday they were married at the Little Church Around the Corner, thereby cutting down Mr. Grundy's record by two days.

"Love at first sight," was Doctor Jones' explanation. They will live at 203 Golden Hill street, in this city, upon their return from their wedding trip.

MUST ALWAYS BE ON JOB

Chicago Detectives Called Down for Reading Newspapers on Street Cars.

Chicago.—"Outside the privacy of your own apartments, the office or any place where there isn't a chance you might see people you ought to be watching, don't use your eyes for anything else except business."

Acting Chief of Detectives James V. Larkin glared at 37 new members of the plain-clothes squad.

"I saw some of you," he continued, "reading newspapers on the car this morning when you should have been watching to see if there were any dips' picking purses. Newspapers on the cars are barred hereafter."

DAIRY FACTS

GIVE COW NUTRITIOUS FEEDS.

Pennsylvania Experiment Station Recommends Decrease in Silage in Drying-Off Process.

For a considerable period before the dairy cow is due to freshen it is best to feed highly nutritious feeds. About 60 days before the time for parturition the cow should be dried off. It is necessary that this be done carefully, as old milk left in the udder may lead to garget or other ills.

For the drying-off process the Pennsylvania experiment station recommends decreasing the silage to about 20 pounds and the grain to four pounds daily. No change is necessary in the amount of hay fed. After the cow is dry the grain ration is resumed and the amount of grain increased gradually until the week just previous to freshening.

The grain ration ought to be laxative in character, highly nutritious and palatable. During the last week the cow should be placed in a box stall and her grain lessened. Equal parts of wheat bran and ground oats or chop with alfalfa hay and mangels is recommended as a good ration to feed at this time.

After parturition the cow should not be milked until the second day, except by the calf, unless, as is the practice of some dairymen, the calf is removed at once. For several days the cow should be allowed only tepid water. For feed, good clover hay, mangels and bran and oats are probably best until her system becomes normal again. By the third day the cow may be returned to her stall.

KEEP DAIRY PRODUCTS COLD

Special Precautions Should Be Taken to Cool Milk After Being Drawn and Then Kept So.

Milk and cream are perishable products and every possible precaution should be taken at the farm and in the home to keep these products wholesome. In the fall with the cooler weather, there exists an opinion that ice or other methods of cooling milk and cream is unnecessary to have these products remain sweet in cold weather, says Prof. V. R. Jones of the South Dakota department of dairy husbandry. This is a false assumption. Special precautions to see that these dairy products are cooled immediately after drawn and kept cold until delivery are important.

Milk and cream will contain germs, or (lactic acid) bacteria no matter how careful we are in its production. The bacteria that cause milk to sour multiply very rapidly at moderately high temperatures (70-80 degrees F.) If the milk or cream is cooled to 50 degrees F. or less, the growth of these germs is held in check and these food products remain sweet for a longer period.

If the dairy farmer does his duty in properly cooling milk and cream at the farm, either with ice or cold running water, and the same precautions are taken in the home, there will be less trouble with sour milk and cream.

REMOVE CREAM FROM BOTTLE

Simple Utensil With Which Cream May Be Taken From Milk Bottle Without Mixing Milk.

A utensil for removing cream from a milk bottle consists of a cylinder about half the length of a quart bottle and of a diameter slightly less than that of the mouth of the ordinary milk container. The device is held in one hand, the index finger passing through a small looped handle at the upper end. Projecting from the otherwise closed upper end of the cylinder is a small tube. A screen extends across the cylinder's lower end. After inserting the separator into the bottle to the depth of the cream, the thumb is placed over the end of the tube. The separator may now be lifted from the bottle filled with cream, the screen and suction combining to keep the fluid from flowing downward.—Popular Mechanics Magazine.

The ELEVEN TOWNS

Entered at the postoffice at Goodridge, Minn. as second class mail matter.

Now that war has been declured, to the entire satisfaction of Teddy Roosevelt and Billy Taft, we hope they will show their patriotism by immediately departing for the trenches in France. Men of their type should make excellent soldiers, for their enthusiasm for killing more than makes up for the lack of agility. It would look bad for them to stay home now.

Had we kept out of this world war, posterity could have pointed to our nation as a true example of civilization in times when men's mind were craged with the idea of Killing. But the men who profits by war has decreed it otherwise, and the masses of this country are helpless. We sincerely doubt if thirty per cent pf the nation's population wanted war, but the wishes of the people are not considered. Money talks and dictates the nation's policy, but beware of the day of reckoning when the worm turns here as in Russia.

Some people are never satisfied. In our last issue we endeavored to appease the Comet Publishing Company, but of no avail. For the sake of unity and brotherly love we are willing to give them a little space in our columns again. Still we do feel that the Comet Publishing Company is assuming a wrong attitude towards the freedom of the press. Some day it may wake up to find that the instrument, it now seeks to use on us, has rebounded.

But we are inclined to be charitable and can say that we have recentiy learned more about the personel of the company and that those we know are above reproach Of the rest we forbear to speak.

The management has informed us that the Postal Department did not issue a fraud order, and we therefore say that our statement formerly made was incorrect, the same having been made from knowledge gained through the Thief River Falls newspapers. We have no bone to pick with this concern and hope it may be successful in establishing a magazine with a million subscribers. It would mean a great deal to Thief River Falls and to the whole of Pennington County. We are ready to do our share to help the thing along, and can say that if the Postal Department gives the boys a fair deal, success should be fairly certain.

Statement Of The Ownership, Management Etc., Required By The Act Of Congress Of August 24, 1912,

Of The Eleven Towns published weekly at Goodridge, Minnesota for April 1st 1917.

State of Minnesota
ss.
County of Pennington

Before me, a Notary Public in and for the State and county aforesaid, personally appeared H. W. Smith, who, having been duly sworn according to law, deposes and says that he is the Pubisher of the Eleven Towns and that the following is, to the best of knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443 Postal Laws and Regulations, printed on the reserve of this form, to wit:

1. That the names and addressess of the publisher, editor, managing editor, and business manager is:
H. W. Smith, Goodridge, Minnesota.
2. That the owner is:
H. W. Smith, Goodridge, Minnesota.
3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are:
None.

H. W. Smith.

THE DAIRY

PROFITS FROM FALL CALVES

Farmers Find It Most Profitable to Have Cows Freshen In Autumn—Needs Less Feeding.

Because more milk would be produced in the year and calves would be raised cheaper, farmers find it most profitable to have their cows freshen in the fall months.

The cow gives a large flow of milk at the beginning of the period of lactation. In the spring the milk yield, which gradually falls off, is suddenly increased when the cow is turned on fresh pasture.

Calves born in the fall need mainly milk and eat little grain during the period of winter feeding. When spring comes they are ready to be turned on pasture. Spring calves consume milk and grain during the cheap pasture season and require the same high-priced feeds during the following winter, when they are older and thus eat more. The fall-born calf at the same age needs only pasture.

At the Ohio experiment station some calves born in the fall were raised for about $5 less than others born in the spring. Under average farm conditions this difference would be even greater, as no grain would be fed to fall-born calves on pasture, while those at the station were given grain because of pasture shortage.

"GENTLE" BULL DOES INJURY

Few "Don'ts" Given by Expert of Missouri College to Be Followed in Handling Bulls.

By W. W. SWETT, Missouri College of Agriculture.)

Following are a few "don'ts" which can be followed to advantage in handling a bull:

Don't underfeed him when young or keep him overfat when mature.

Don't use him too heavily before he is mature.

Don't abuse him. You can get better results by gentle but firm handling.

Don't tease him or allow children to play with him.

Don't let him get the upper hand at any time.

Don't let him realise his enormous strength.

Don't keep him confined. Give him plenty of exercise.

Don't trust any bull at any time. It is the "gentle" bull that does the damage.

VENTILATION OF DAIRY BARN

Where Air Is Good, Cows Should Remain in Stalls at Night Both in Summer and Winter.

If ventilation of the barn is good, cows should remain in the stall all night, both in summer and in winter. If ventilation is imperfect in very hot weather it would be advisable to turn them out in some clean lot or pasture, but in doing this considerable manure is lost.

During some of the colder days of winter it would be advisable not to turn cattle out except during short periods for watering. Chilly weather has considerable influence in reducing milk flow and a good cow should not be exposed to too severe climatic changes.

LACK OF SHELTER FOR COWS

Exposure to Cold Rains Causes Big Drop in Milk Production—Cleanliness Is Important.

(By C. H. ECKLES Missouri College of Agriculture.)

The dairy cow often suffers the most from exposure to the weather before real winter has begun. After steady cold comes the cow is generally stabled. Exposure to cold rains is often more injurious to the animal than the colder but dry weather in winter.

The dairy cow is not like the fat steer, protected from cold by a layer of fat. As a result, bad weather causes a big drop in milk production. So long as the weather is dry it is just as well to leave the cow outside nights, but every cold rain should find her protected.

It is not necessary in the climate of Missouri to go to any great expense on most farms in order that the barn may be warm. The main thing is to have tight walls so there is no draft or wind, and a good roof. Care should be taken in arranging the stalls in the form of a platform of the right length and a gutter of sufficient depth to hold the manure. The cleanliness of the milk depends to a considerable extent upon having the barn built so the cow will keep herself clean.

GOLD OUTPUT FOR 1916 $478,625,000

Total Imports of Metal Into United States Were More Than $200,000,000 Greater.

$1,300,000,000 DURING WAR

World's Yearly Production Increased More Than Sixty-Fold in a Century —Witwatersrand Most Important Source of Supply.

Washington.—The world's total production of gold last year, though nearly equal to the record output for any year, was less than the amount imported into the United States in that period. Most of the imports came from Great Britain, which controls two-thirds of the production.

The total imports of gold into this country in 1916 amounted to $685,000,000, and the world's production to $478,625,000. In 1915 the imports were $452,000,000 and the world's production $488,000,000, the highest on record. Since the outbreak of the war, August 1, 1914, the United States has imported a total of $1,300,000,000 in gold, and has retained approximately $1,000,000,000 of it.

The decrease in production of nearly $10,000,000 is accounted for by the Statist, which supplies the estimate of production, on the ground of lessened production in Australasia and the United States, partly offset by an increase of about $5,000,000 in the African output.

Source of Gold Supply.

The most important source of the gold supply is the Witwatersrand. With the small output of outside districts of the Transvaal this section produced last year gold to the value of $107,000,000, a record annual output. Rhodesia produced $19,480,000; Australasia, $44,210,000; Canada, $20,250,000; India $11,500,000, and the United States $95,435,000.

The world's yearly value of gold output about a century ago averaged $7,500,000, the bulk of which was derived from Russian gold workings in the Ural mountains. Gradually other sources of supply came to be added to Russia's production, and large increases occurred. Such gains were very considerably added to in the late forties and early fifties of last century consequent on the discoveries made in California and Australia.

The discoveries in the two widely separated regions stimulated search in all parts of the world, and especially intermittently during the second half of the nineteenth century there were new finds of importance. Those in India, about 1869, at the Colar field, were "suspect" for a considerable while, and but for pluck and perseverance, might have been overlooked. However, in the end they proved successful. The policy of sinking a single shaft a few feet further saved the situation, and though quite ten years were taken to enter the stage of production, India since 1880 has, to 1916, inclusive, obtained from modern working about $250,000,000 value.

The greatest discovery so far has been that of the Witwastersrand. Prior to ascertainment of existence of gold-bearing bankets in the Transvaal there had been finds of quartz deposits in other parts of the Transvaal republic, also at the Gold Coast. Quickly it was ascertained that the region where now is Johannesburg was highly payable. In September, 1886, the Rand was proclaimed a goldfield, production commenced, and the output of the Transvaal, from some $50,000 worth of gold in [illegible], five years later attained $7,500,000, and the output in 1899—the year of the commencement of the Boer war—was at the rate of about $100,000,060 a year.

Record Production.

For 1916 the value of production was the record one of about $107,500,000, and at the present time the Rand production alone equals about 41¼ per cent of the total gold output of the world, while the whole of Africa shows a proportion of over 47 per cent. There were discoveries in Rhodesia, which in 1916 also attained a record production, and West Africa, from which came native-produced gold dust—hence the names of Guinea Coast and Gold Coast —and which in modern time has, with some slight success, added to the world's supply.

For many years Victoria, of the Australian continent, was the premier producer of gold, but it now yields comparatively a small output. In the mid-nineties important discoveries were made in West Australia, and the Coolgardie and other fields quickly put on the pace. The maximum output of the colony of any year was that of 1903—$43,850,000—but gradually since its production has fallen off. In New Zealand and Queensland finds were reported early in the sixties.

Till quite recent years the output of Canada was nearly all a by-product in connection with copper smelting, averaging till the mid-nineties only about $1,000,000 worth of gold per annum; but late in the nineties the Yukon field became a fairly important one, and discoveries of out-and-out gold regions in Ontario have recently commenced to show some good figures. Yukon attained its highest in 1900—some $18,000,000; but in 1916 fell to $5,000,000.

Praises should be judged solely by the way they were obtained.

"I'M SORRY"

By EARL REED SILVERS.

"Unless you tell me you're sorry, I'll never speak to you again." Althea Burton's brown eyes flashed angrily.

"But why should I be sorry for something I didn't do?" Bob Ransom was studying to be a civil engineer and was generally more practical than occasion demanded. He was also stubborn.

"You did do it," Althea answered. "I saw you out walking with Irene Fenwick last night. You went by this house."

"But I didn't. I was in the office last night."

"I don't believe you," she snapped. "I saw you with my own eyes."

"Well, if you don't believe me, it isn't my fault."

They were both young and these temporary tilts had come to be a weekly occurrence. Neither took them very seriously, although on this special occasion Althea seemed to be more angry than usual. But Bob accepted her attitude philosophically.

"Let's go to the movies," he suggested.

"No, I won't go anywhere until you say you're sorry."

"But Althea, I can't be sorry for something I didn't do. Won't you be reasonable?"

"Very well." She spoke calmly, but with decision. "I'm going in the house."

"What can we do in there?" He still failed to take her seriously.

"We can't do anything," she answered, emphasizing the personal pronoun. "But I have a book to read."

"I'll read too." He spoke lightly. "The movies aren't any good, anyhow."

"Are you going to say you're sorry?"

"Nope." He lighted a cigarette.

"Well, then," she spoke slowly. "I'm afraid that I'll have to say good-night."

"All right, we'll both say it." He smiled whimsically. "But what shall we say it to?"

"To each other." She held out her hand. "Good-night, Bob!"

"Good-night, Althea!"

He expected her to laugh and change the subject. But she didn't; instead, she turned abruptly and entered the house. Bob, rather puzzled, waited until the cigarette had burned to the smallest possible stub. Then he walked over to the window of the library and peered inside. Althea was nowhere to be seen. Slightly resentful, he pursed his lips and whistled softly. But she did not answer the signal; all was silent. Suddenly growing angry, he stamped across the porch and down the steps, lingering at the gate in the faint hope that she would call him back. But no summons came. Head held high, cheeks flushed angrily, he made his way homeward.

He thought that she might possibly telephone him the next forenoon, but in this he was also mistaken. Althea seemed to be very much in earnest in her resolution.

Finally he told his stenographer that he was through for the day and left the office.

"A round or two of golf will fix me up finely," he said to himself. "I need a little diversion."

At the Country club he was unable to find anyone to play with him, so he started off alone. The links were deserted except for one lone figure that hovered near the third hole. It was a girl, and she looked vaguely familiar. After Bob had reached the second hole he discovered that it was Althea. His heart beat a trifle more quickly.

"She plays much more slowly than I do," he said. "I'll probably catch her near the fifth hole."

But the girl had evidently seen him, for she followed the ball with unnecessary swiftness, and Bob, loafing along in the rear, did not materially decrease the gap between them.

"If she only weren't so stubborn," he mused, "we could play the round together."

At the seventh hole she sliced into the rough, and had difficulty in finding the ball. Bob was only about 100 yards away when she resumed playing, and he was forced to wait until she was the full two strokes ahead.

She sliced again at the eighth tee, sending the ball into the rough far to the left. Bob, taking this opportunity to "go through," hurried to the tee and drove hastily. But the ball, instead of going in a straight line, as it generally did when Bob was driving, sliced to the left. In a remarkably direct line, it soared for the exact spot where Althea was standing.

"Fore!"

Bob put all the strength of his lusty lungs into the call. The girl looked up, and attempted to dodge, but it was too late. The ball struck a stone in front of her and bounded swiftly, striking her just above the knee.

"Oh!" she said, and bent down to nurse the injured leg.

Bob ran forward at full speed. She looked at him half resentfully.

"Althea," he said, "I'm sorry. I didn't think for a moment that I would slice in this direction."

Suddenly her face broke into smiles.

"I'm glad," she answered, "because it made you say 'I'm sorry.'"

"Oh!" He smiled at the trick Fate had played. "Shall we finish the round together?"

"Yes." She looked at him shyly. "And now that you've said you're sorry about what has happened I want you to come to see me tonight. Will you?"

Bob grinned.

"You just bet I will," he said.

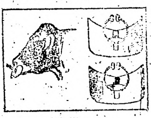
CALF WEANER IS EFFECTIVE

Device Arranged With Sharp Point Which Pricks Youngster's Nose—Can Graze Freely.

When a calf, wearing this weaner, tries to get a meal from its mother, the sharp point pricks its nose, also the shield is curved at the sides and prevents side sucking. Since the device is suspended freely from the nostrils, grazing is not interfered with.



Calf Weaner.

KEEP CORRECT MILK RECORDS

Note Production of Each Individual Cow and Save Heifer Calves From Large Producers.

You cannot always buy good cows, but another way to get a good herd together is by keeping records of the production of each individual cow in your herd and saving the heifer calves from the larger producers. These calves being from a good registered sire and from selected cows, it will not take many years to build up a first-class herd. You can only know your best cows by continuous weighing and testing of the milk, and keeping records of each individual, so that some information may be secured as to the cost of production, which is growing more important as the prices of feed stuffs and labor advance.

CALVES GROWN ON SKIM MILK

Cost Is Less Than Where Whole Milk Is Fed—Animals Make Better Gains in the Feed Lot.

The cost of growing calves on skim milk was less than where whole milk was fed, or where the calves ran with their dams, and the skim-milk calves made better gains when put into the feed lot than the others did, according to some experimental work at the Kansas station.

It cost [illegible] per 100 pounds gain on the calves fed on skim milk, $7.0[illegible] per 100 pounds gain on whole milk, and $4.41 per 100 pounds gain where the calves ran with their dams. When these same calves were put into the feed lot the skim-milk calves made the fastest gains and the whole-milk calves next.

EAT OUR MEATS

You'll need neither a hatchet nor a stick of dynamite
A good, ordinary set of molars will dispose of
A Fine Tenderloin Steak,
An Extra Porterhouse Steak,
A Luscious Round Steak
A Nutritious Roast,
A Dish of Pork Chops

If you haven't any teeth, we have sausage that will fairly melt in your mouth. Eat our meats. Good for your stomach. Buttermilk on ice, 5c. per quart. Bring your can.

Goodridge Meat Market
R. R. JOHNSON, Proprietor

CLEANLINESS OF CALF PENS

Use Abundance of Nice Straw and Dig Out All Manure Frequently—Calves Are Frisky.

The calf pen must be kept clean. Use lots of nice straw, not putting it upon a lot of fermented filth, but dig out all manure very frequently and add fresh straw almost daily. Calves are so frisky that they trump the straw into the manure to beat everything.

Separator milk, tender clover or alfalfa hay, bran, oil meal, silage, shelled corn, such feeds are the stuff good calves are made of.

CIVIL ENGINEER

Copyright by Fleming H. Revell Company

SYNOPSIS.

CHAPTER I—Bertram Meade is consulting engineer representing his father, the great Meade, who is the designer of the International bridge, the greatest cantilever structure the world has ever heard of. In the shadow of the uncompleted bridge young Meade receives Colonel Illingworth, president of the Martlet Bridge company, the constructors, and the colonel's daughter, Helen, whom he loves.

CHAPTER II—At dinner the possible weakness of the compression members of the bridge is talked of and Meade defends his father's calculations.

CHAPTER III—Meade and Helen go out upon the bridge in the moonlight and Helen narrowly escapes a fall to the river below. Meade tells his love and they go to the colonel, who approves their marriage when the bridge is finished.

CHAPTER IV—Abbott, the construction engineer, tells Meade there is a deflection in member C-10-R, but makes light of it. Meade, after vainly trying to stop the work, wires his father and follows the telegram to New York.

CHAPTER V—At the great engineer's office father and son try to prevent disaster, but young Meade only reaches Colonel Illingworth as a message comes that the bridge, with 150 men, is in the river.

CHAPTER VI—Abbott goes on with the work, ignoring Meade's protests, but while uneasily inspecting C-10-R the lacings snap under his eyes and he goes into eternity with the other men on the falling bridge.

CHAPTER VII—Young Meade has pointed out to his father the possible weakness, but his objections have been overruled. His father now prepares a statement showing his own fault and sends his secretary, Shurtliff, to the Gazette with it.

CHAPTER VIII—Young Meade, on his return, meets Rodney, an old college friend, and other reporters at the door of his father's office. He finds his father dead from heart failure. He assumes entire responsibility for the catastrophe. Shurtliff, who has not obeyed orders, but concealed the papers the dead man had given him to make public, also accuses the younger Meade.

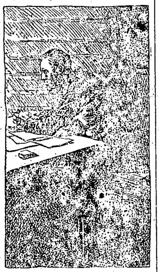
CHAPTER IX—In her father's presence and over her protest Meade breaks his engagement with Helen.

CHAPTER X—Out West, at a big irrigation dam under construction, Meade begins life over again as a rodman under an assumed name.

CHAPTER XI.

The Valley of Decision.

Much water had run under the bridges of the world and incidentally over the wreck of the International,



He Debated With Himself Whether It Would Not Be Better to End It Than to Live.

since that bitter farewell between Bertram Meade and Helen Illingworth over the grave of the old engineer. Life had seemed to hold absolutely nothing for Meade as he knelt by that low mound and watched the woman walk slowly away with many a backward glance, with many a pause, obviously reluctant. He realized that the lifting of a hand would have called her back. How hard it was for him to remain quiet; and, finally, before she disappeared and before she took her last look at him, to turn his back resolutely as if to mark the termination of the situation.

Father, fame, reputation, love, taken away at one and the same moment! A weaker man might have sent life to follow. In the troubled days after the fall of the bridge, his father's death, the inquests, his testimony and evidence freely given, and that parting, something like despair had filled the young engineer's heart. Life held nothing. He debated with himself whether it would not be better to end it than to live it. He envied his father his broken heart. Singularly enough, the thing that made life at least value was the thing that kept him from throwing it away—the woman.

Striving to analyze the complex emotions that centered about his losses he was forced to admit, although it seemed a sign of weakness, that love of woman was greater than love of fame, that in the balance one girl outweighed bridge and father. That the romance was ended was what made life insupportable. Yet the faint, vague possibility that it might be resumed if he could find some way to show his worthiness was what made him cling to it.

Of course he could have showed without much difficulty and beyond peradventure at the inquest over Abbott and the investigation into the cause of the failure of the bridge—unfortunate but too obvious—that the frightful and fatal error in the design was not his and that he had protested against the accepted plan, if only he had found the letter addressed to his father. But that he would never do and the letter had not been discovered anyway. He did not even regret the bold falsehood he had uttered or the practical subornation of perjury of which he had been guilty in drawing out and accepting and emphasizing Shurtliff's testimony.

There had been no inquest over his father's death. The autopsy had showed clearly heart failure. He had not been compelled to go on the witness stand and under oath as to that. Although, if that had been demanded, he must needs have gone through with it. Indeed so prompt and public had been his avowals of responsibility that he had not been seriously questioned thereon. He had left nothing uncertain. There was nothing concealed.

He had inherited a competence from his father. It was indeed much more than he or anyone had expected. He had realized enough ready money from the sale of certain securities for his present needs. The remainder he placed in Shurtliff's care and a few days after the funeral, having settled everything possible, he took a train for the West.

The whole world was before him, and he was measurably familiar with many portions of it. He could have buried himself in out-of-the-way corners of far countries, in strange continents. These possibilities did not attract him. He wanted to get away from, out of touch with, the life he had led. He wished to go to some place where he could be practically alone, where he could have time to recover his poise, to think things out, to plan his future, to try to devise a means for rehabilitation, if it were possible. He could do that just as well, perhaps better, in America than in any place else. And there was another reason that held him to his native land. He would still tread the same soil, breathe the same air, with the woman. He did not desire to put seas between them.

He swore to himself that the freedom he had offered her, that he had indeed forced upon her unwilling and rejecting it, should be no empty thing so far as he was concerned. He would leave her absolutely untrammeled. He would not write to her or communicate with her in any way. He would not even seek her to hear about her and of course as she would not know whither he had gone or where he was she could not communicate with him. The silence that had fallen between them should not be broken even forever unless and until— Ah, yes, he could not see any way to complete that "unless and until" at first, but perhaps after a while he might.

He knew exactly where he would go. Dick Winters, another classmate and devoted friend at Cambridge, had gone out West shortly after graduation. He had a big cattle ranch miles from a railroad in a young southwestern state. Winters, like the other member of the youthful triumvirate, Rodney, was a bachelor. He could be absolutely depended upon. He had often begged Meade to visit him. The engineer would do it now. He knew Winters would respect his moods, that he would let him severely alone, that he could get on a horse and ride into the hills and do what he pleased, think out his thoughts undisturbed.

To Winters, therefore, he had gone. He had an idea that his future would be outside of engineering. Indeed he had put all thought of his chosen profession out of his mind and heart, at least so he fancied. Yet, spending an idle forenoon in Chicago waiting for the departure of the western train, he found himself irresistibly drawn to the great steel-framed structures, the skyscrapers rising gaunt and rigid above the other buildings of the city.

Again the train was delayed and held up for half an hour just as it reached the Mississippi river. He left his seat in the dining car, his dinner uneaten on the table, to go out and inspect the bridge during the half-hour that the "limited" lay idle. The next day some enormous irrigation works in western Nebraska so engrossed his attention and aroused his interest that in spite of himself he stopped over between trains to see them. And these actions were typical.

Yet after every one of these excursions back into his own field, his conscience smote him. Was he never to get away from this engineering? Was [illegible] and stone, steel and concrete, designs and plans and undertaking and accomplishment in the world? Because it was the thing that he must abandon and put out of his mind, engineering seemed the only thing he cared for. There would be no engineering on that ranch on the slopes of the range. He could settle the question there.

Winters was glad to see him. He and Rodney and Meade had been the warmest of friends. Of course Meade could not tell Rodney the truth on account of his newspaper connections, but he decided finally that he could and would tell Winters under assurance of absolute secrecy. For one thing the big cattleman had bluntly refused to credit his friend's first statements; and, when he at last heard the truth, he blamed him roundly while he appreciated fully the nobleness of his self-sacrifice. The clear-headed, practical Winters put it this way: Meade was capable of doing splendid service to humanity as an engineer and bade fair to be even greater than his father, yet for the sake of the fame of a dead man, to whom after all it would matter little, he had thrown away that splendid opportunity!

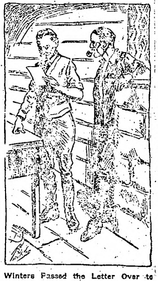
This was a new thought to Meade and a disturbing one. Unfortunately, as even Winters was forced to acknowledge, the suggestion came too late. The course had been entered upon. It would be cowardly to try to change it now. Indeed it would have been impossible with the disappearance of the written protests and notes. Even if Shurtliff had been willing, no one would have believed a delayed retraction and explanation, and Shurtliff would not have been willing Meade well knew. Neither for that matter was Meade himself. He was glad that the affair had been settled and would not change it even now though Winters', rough-and-ready presentation of the situation disquieted him.

Winters, who saw how greatly overwrought and unstrung his friend was, contented himself with the assertion. He did not press the point or argue it with him. He rested quietly confident that matters would right themselves some way in the long run. He treated Meade exactly right. He left him to his own devices. He did not force his company upon him. Sometimes the engineer would mount a horse—and all at the ranch were at his disposal—and would ride away into the woods and mountains with a camping outfit. Sometimes he would be gone for several days, coming back white and haggard and exhausted but victor in some hard battle fought out alone.

One day there came to the ranch a letter to Winters from Rodney, full of friendly chat and pleasant reminiscence.

"Meade has disappeared absolutely," wrote Rodney in closing. "Even Miss Illingworth, to whom he was reported engaged and upon whom I have called occasionally, says she does not know his whereabouts. Of course you saw in the papers his connection with the tragedy and failure of the International? Although his frank statement was corroborated by that of the older Meade's private secretary, I have never been able to believe it, neither does Miss Illingworth. I know Bert, and so does she. We can't accept even his own testimony. We have been working together to establish the truth, but with very faint prospects of success so far. There's some tremendous mystery about it. I have thought that maybe Meade might have come to you. If he has show him this letter and beg him to tell us the truth at any rate."

Winters passed the letter over to Meade without comment. The engineer read it with passionate eagerness. He was hungry for any news of Helen Illingworth. Rodney was calling upon her. A sharp pang of jealousy shot through him at that, although he knew there was no reason. Dear old Rodney! He could see his grave face, his disapproving manner, his air of unbelief, as he had taken down Meade's words in the office that tragic day.



Winters Passed the Letter Over to Meade Without Comment.

Of course, Helen Illingworth was not a recluse as he was. She mingled in society. She took up life with its demands. She entered into its pleasures and fulfilled its duties. He was jealous of everyone who might come in contact with her, but he knew the names of none except Rodney.

And they were suspicious of his avowal! That was balm to his soul. Of course Helen Illingworth was suspicious, but why should Rodney doubt his assumption of the blame? And they were working to establish his innocence. The thought disquieted him [illegible] some way. And it gave him joy also. They would work despite any remonstrance from him. He thought of that protest to his father always with uneasiness. If he could only have found it and destroyed it himself he would have been happier. Could it be in existence somewhere? Would it turn up? Would they unearth it? Well, he had done his best for his father, yet he was glad those two disbelieved and were working for him.

Meade had been the most brilliant, Winters the most indifferent, Rodney the most persevering, of the trio at college. He remembered that well. His first thought was to forbid Rodney to do anything further, although how far his friend would respect his wishes he could not tell. Anyway, he did not have to decide that matter, because he could not say a word to him. To have allowed Winters to write would have betrayed his whereabouts. He was living with Winters under an assumed name of course. He had had his hair cut differently and had grown a beard and mustache. He thought it would have taken a keen eye indeed to have recognized him with these changes.

In the end he handed the letter back to Winters, only charging him that if he wrote to Rodney he must not betray the fact that Meade was with him. He had plenty of time to think over the situation. He decided finally that so long as he had been born an engineer and trained and educated as an engineer he would have to be until the end of the chapter. He would go out and seek work, not such work as his ability and experience, but under some assumed name he would begin at the very beginning, at the foot of the ladder as a rodman, if he could; and then he would work on quietly, faithfully, obscurely, praying for his chance. If it came he would strive to be equal to the opportunity; if it did not at least he would be engaged in honest work in an honest way.

It was a very humble program, not at all promising or heroic or romantic, just a beginning. He would work on and wait. They say that all things come to him who waits. That is only half true. Some things come to him who waits sometimes. That is more nearly accurate. Well, he could think of no better plan. So he bade Winters good-by, swearing him again to secrecy until he should lift the ban against speech, and rode away. When he got to the little village on the Picket Wire below the dam he stopped a long time gazing at the long bridge, or viaduct, of steel that was replacing the old wooden trestle and carrying the railroad from the hills to the eastward over the river.

It was not such an undertaking as the lost International, still it was interesting engineering construction. It was work that would be intensely congenial, to which he was drawn almost irresistibly, yet he managed to hold himself aloof. The Martlet people were building this steel bridge and they had just finished the arch up under the mesa. A well-known construction company was building the great earth dam across the Picket Wire in the valley.

Meade's engineering life had been spent mainly out of the United States. He had never been connected with the Martlet and its employees until he had been associated with his father on the International. He could have gone among them with little danger of immediate discovery, since most of the men he had known had gone down with the bridge, but he decided not to do so. The work on the dam would be simpler and he would have less opportunity to betray himself and it would give him more chance to work up in a plausible and reasonable way. Besides, if Colonel Illingworth came on to inspect the bridge, as he would probably do, Meade would have to leave before his arrival. The dam would be safer. No one would ever think of looking for him there. And no one would ever recognize in the rough-bearded workman the clear-cut, smooth-faced young engineer of other days.

The dam was twenty miles up the valley. Yes, he would be less apt to be observed working there than on the bridge. Yet as he recalled that private car and that it might come there, he realized that she might be on it. His heart leaped even as it had leaped at the sight of the viaduct then building, as it had quivered to the familiar rat-tat-tat of the pneumatic riveters and the clang and the clash of the structural steel. But what was the use? He would not dare trust himself to look at her even from a distance. No, it was the dam that best suited his purpose, so he turned away from the bridge and rode up the valley. There he was fortunate in falling into a position, as has been set forth.

CHAPTER XII.

Marshaling the Evidence.

For all her sweetness and light, Helen Illingworth was dowered with intense energy and a powerful will. What she began she finished, and she was not deterred from beginning things by fears of consequences. She was convinced that Meade had not told the truth in that famous declaration in his father's office. She respected him for his desire to shield his father's name and fame even at the expense of his veracity, albeit she would not have been a woman if she had not resented the fact that in so doing he had sacrificed her happiness as well as his own.

The question whether Meade, Jr., was the more responsible or even responsible at all was more or less academic to Colonel Illingworth. He would have had nothing further to do with either of them if both were living, and certainly not with the younger survivor. He tried to believe that if it had come to a final choice the daughter [illegible] the habit of women in the experience of life, would not have given up age and her father for youth and her lover. Indeed she was too genuinely devoted to her father to do that except as a last resort.

She cherished the hope first, that Meade could re-establish himself—she had too sweeping a confidence in his character and capacity to doubt that—and second, that it could be shown that he had not been responsible for the failure of the bridge. She was more and more convinced that his assumption of the blame had been dictated by the highest of motives and instead of being a fit subject for censure and condemnation, he merited admiration and applause. She hoped with her woman's wit to prove this eventually, perhaps in spite of her lover, and to this end she applied herself assiduously to solve the problem.

To her, at her request, came Rodney. Now the reporters had dealt very gently with Helen Illingworth. They had made no announcement of the engagement or of its breaking at her father's earnest request. There was no necessity of bringing her into the bridge story, although it would have added a dramatic touch to their narratives. Her inclination had been to avow it. But upon reflection she saw it would have annoyed her father beyond expression, it would not have helped Meade any and it might hamper her in her work. She realized that she had Rodney to thank for this omission and after she had time to collect herself she asked him to call upon her. He was very glad to come.

"I sent for you, Mr. Rodney, on account of Mr. Bertram Meade," she began, after thanking him for his courtesy toward her the day the older Meade died and thereafter. "I want you to help me."

"I shall be delighted to do so for your own sake. I know how deeply interested you are in Meade's rehabilitation."

"Mr. Rodney," returned the woman, flushing a little, "you know of course that we were engaged. He considers the engagement broken."

"I suppose so. That would be like him," said Rodney gravely. "Indeed as a man of honor he could do no less."

"You are all alike," said the woman a little bitterly. "Your notions are supreme. You may sacrifice love and your best friend so long as you preserve those notions of honor intact."

"And yet if we weren't honorable men you wouldn't care for us at all."

"Yes, I suppose that's it. Well, I do care very much, as you understand. I may as well be frank with you. My father, of course, is bitterly antagonistic to Mr. Meade. He won't even allow his name to be mentioned."

"One can hardly blame him for that, Miss Illingworth. The failure of the bridge seriously embarrassed the Martlet Bridge company, and it is a great handicap for them to overcome in seeking any further contracts."

"But I did not summon you here to discuss the affairs of the Martlet Bridge company," said Helen, "interesting though they may be, but to see if by working together there was not some way by which we could prove that Bertram Meade has assumed the blame to save the honor and fame of his father."

"You believe that, Miss Illingworth?"

"I am sure of it."

"So am I," said Rodney quickly.

"Thank God," cried the girl a little hysterically, surprised and almost swept off her feet by this prompt avowal by one who, though young, was already an authority in the literature of engineering. "Why do you say that? What evidence have you?"

"Unfortunately," answered Rodney, "I haven't any tangible evidence whatever, but I know Bert Meade as few people know him, Miss Illingworth, perhaps not even you," he went on, in spite of her unspoken, but vigorous protest at that last statement, as she shook her head and smiled at him. "And there are several little circumstances that make me feel that he could not have been to blame. Have you any ground for your conviction?"

"Probably even less than you have and yet I, too, know him." Helen Illingworth looked into the plain, homely, but strong, reliable face of the man and dismissed any thought of reserve from her mind.

"Let us place," she began, "the little circumstances upon which our intuitions are based, if intuitions are ever based on anything tangible, together. Perhaps the sum of them may yield something."

"The suggestion is admirable," asserted Rodney, "and as I knew him first and longest I will begin. Perhaps it would be well, too, to take notes so that we may consider them at leisure getting an eye view as well as an ear view of them."

"Now, in the first place," he began, writing and speaking at the same time, "point one is, Meade's absolutely unbounded devotion to his father. The old man was not always right. The boy was as clear as a bell on most things, but I recall that he would maintain his father's propositions tenaciously, determinedly, long after everybody, perhaps even the old man himself, had been convinced of their fallacy. Engineering is in Meade's blood. He is the fifth of his family to graduate at Harvard and three of his forbears were engineers, his grandfather noted and his father world-famous. He fairly idolized his father. The affection between them was delightful. The king could do no wrong. Meade was quick-tempered and not very receptive to criticism, but he would take the severest stricture from the old man without a murmur."

"Here we have," said the woman, who had listened with strained attention, "an early devotion to a person himself, personally, to Mr. Meade and so he became his private secretary. By his own showing he had been with the dead man on that afternoon. He has the papers."

The woman rose to her feet as she spoke with fine conviction.

"I believe you are right," said Rodney, leaning back in his chair and staring at her through his glasses. "If we can only make him speak— But where is he?"

"Working for my father."

"What do you mean?"

"I mean that I suspected him from the first, and as there was an opening for a private confidential man, who understood engineering—a vacancy made by the promotion of my father's private secretary—I prevailed upon him to give the position to Shurtliff. Father hates the name of Meade, but he worships efficiency and he knows that Shurtliff is the very incarnation of the particular kind of ability that he desires, so he is with my father constantly and I have him always under my eye. When we go away in the car, he goes along."

"What are you going to do?"

"Win his confidence, his affection if I can, appeal to him, and—"

"By Jove," said Rodney, "I believe you can do it. You can't drive that old man."

"I know it," said the woman.

"You haven't told him that you thought it was his fault?"

"No."

"I couldn't do anything with a man like Shurtliff. You can. You can win his devotion, you can let him see how much the reinstatement of Bert Meade in honor again means to you. You can do it."

"Meanwhile you will help me, won't you?"

"In any way, in every way. Do you know where he has gone?"

"I haven't the slightest idea. He might be in Africa, or South America, or out West, or up North. Do you see those flowers?"—she pointed to a great bunch of American Beauty roses, which had been forced for her apparently, and which she had received on that very day—"Dards, you know, the Madison avenue florist, sends me a box of magnificent blossoms—roses, violets, orchids, always different—every week. They speak to me of him."

"Have you ever tried to trace them?"

"No. I know whence they come and that is all. We will hear from him some day, somewhere, somehow. Meanwhile we will work, work, work!"

"And you will allow me to say before I go that since I have had this conversation with you I do not see how even love for his father or his family name would have led Meade to do it."

"Don't say anything against him," said Helen Illingworth quickly. "He was mad with anxiety, shame, regret. Whatever he did I love him just the same."

TO BE CONTINUED.

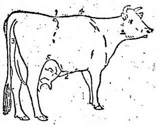
DAIRY

POINTS OF IDEAL DAIRY COW

Excellent Hints Given Which May Help Farmer in Selecting Animal for His Herd.

In selecting cows for dairy herds there are several essential points to consider.

The cow should have great stomach capacity; avoid a round bodied cow whose ribs are short, and a flat-ribbed cow. There should be ample room for the udder, which should extend well forward and not hang down. The milk veins should be large and the farther they go the better. The udder should be loose and pliable, when empty—not fleshy.



Ideal Dairy Cow.

The dairy cow should be deep and wide from 1 to 2 as this gives her large capacity for rough feed. The back from 1 to 4 should be sharp, with little flesh, when she is in good condition. She should be well cut up behind so that the udder can extend well up, as at 3. Her flank should be well arched, as at 5, to provide room for a large udder.

The eyes should be large and bright and project well out from the face. This is a strong indication of the nerve force needed for strong digestion and large milk secretion.

Dr. F. H. Gambell, 'phone No. 140. Thief River Falls, Minn.

Everybody come and see "Kindling the Hearth Fire" at the school house Friday evening April 13th.

S. Kennison, of Thief River Falls, was in town, Wednesday, visiting his old friend, C. H. Rossmon.

Willard Hegstrom, arrived here Friday, from near, St. James, Minn. with two cars of farm stock and machinery, and will go to farming on the O. J. Nesja, farm, which he bought last fall.

Rev. Bjornson, conducted services in the Synod church here last Sunday.

Edwin Rowberg, arrived here Tuesday evening from the southern part of this state, and will go to farming on the P. P. Palmer farm, which he bought this winter.

Arthur Tvedt, arrived here from Thief River Falls, Friday morning to spend a weeks vacation at his home here.

Miss Sarah Payne, came up from Thief River Falls, Friday morning to spend the Easter vacation at the home of her folks here.

Bert Walker, went to Thief River Falls, Tuesday evening, to attend an Old Settlers "blow out".

Si Miller, Superintendent for the Atlantic Elev. Co was attending to business matters in town Wednesday.

Ed. Abbot, of Grygla was a Goodridge visitor, Tuesday.

In this week's issue appears an auction sale advertisement for Jacob E. Lee. Read it thru carefully, there may be something among the list of articles offered for sale you may need.

The U. S. NAVY needs men. There is a Recruiting Station at No. 304 Marquette Ave., Minneapolis and branch offices at Grand Forks, N. D.

We are putting in a branch to sell flour, feed, Bran and Shorts at Goodridge, and we will give you the best prices considering the quality that can be obtained Call at the O. K. Restaurant or City Meat Market for prices.

Singer Bros.

Barred Plymouth Rock Eggs for setting, for sale at 5 cents apiece, prepaid.

Anton Knutsen,
(Apr. 12—4 wks) Rt. 1, Goodridge.

Stephen Bordenheimer, came up from Thief River Falls Wednesday evening to visit friends and look over his land interests here.

Henry and John Morken of Carmel, were Goodridge visitors, Wednesday.

John Foss, Howard Yehn, Andrew Sand and Frank Carpenter, left Sunday for east of Thorhult, with four loads of dredge machinery for the American Drainage Co. They returned Tuesday evening.

Miss Teresa Giefer, returned Monday morning from Thief River Falls, where she had spent the Easter vacation.

P. P. Palmer, J. P. Jensen, H. B. Rockne and Chester Tvedt, went to Thief River Falls, Thursday evening to attend a Christian Science lecture.

Mr. and Mrs. Chas. Castello, returned Tuesday from Grand Forks, where Mrs. Castello has been receiving medical treatment.

The United Ladies Aid will meet at home of Mrs. Bratland, Wednesday April 18th. Everybody Welcome.

Rev. Fr. Noesen, will conduct mass in St. Ann's Catholic church here next Tuesday April 17th.

FORSALE—1 12 Disk, or one 14 Disk, will sell either one, good condition, also [illegible] and [illegible] rate.

"Kindling The Hearth Fire"

"Kindling The Hearth Fire" a play in three acts will be presented by members of the Goodridge Literary Society, in the school house Friday evening, April 13th. This play is expected to be a winner, so remember the date and be there.

The following is the cast of characters:

Mrs. Frou, An overworked Farmers' wife, Stelle Arntz
Ned, her young son, Roy Olson
Doris, her daughter, Miss Ellen Gunnerson
Mrs. Stringer, a borrowing neighbor, Miss Hilda Christianson
Mr. Hortwell, A Graduate of the Agricultural College, Henry Rockne
Mr. Field, A prosperous Farmer, Sam Rouze
Dave Dalton, A farmer, who "owns his own farm" Alfred Tvedt
Ida Johnson, Clerk in a department store, Irene Ferdinandsen
Mrs Ryon, The manager of a lodging house, Mrs. McDonald
Mr. Bond, A man with money, Harry Van Tassel
Miss Brooks, A visiting housekeeper for the Welfare League, Miss Teresa Giefer
Pete, Olaf, Hired Men, Hugo Menzel and Alvin Rottke.

Exceptionl Milk Record Reported.

The past winter has held no particular terrors for those who have had a creamery check to look forward to the first of every month. Every day new instances are coming to light which go to show that the man who intelligently follows the pursuit of dairying is the fortunate individual in all seasons of the year.

H. P. Rued owns a good farm in the town of Silverton. Three years ago he secured four grade Holstein cows and a pure-bred bull from a live stock dealer at Northfield, his herd having grown to 12 head from this original investment. During the four months from November 1 to March 1 he milked ten of these cows on an average, with the following cash results: For the month of November his creamery check was $89 00, during December he sold milk and cream valued at $114 61, in January the receipts were $112.16, and in February $102 00 This is a total of $417.77 or the four months, or $104.44 per month. Mr. Rued says that his March account is not yet in, but he knows that it will be the largest he has yet received.

These results were not acheived through any fancy or complicated system of caring for the cattle nor by the employment of high priced milk-making feeds. The rations each consisted of a little grain, prairie hay and corn fodder. Mr. Rued says that had silage been used there is no doubt but that the record would have been better still. [T. R. F. Times.

Peter M. Ringdal,

GRAIN TESTER FOR ALFALFA

Percentage of Germinating Ability Easily Determined by Method Described Herewith.

(From the United States Department of Agriculture.)

The percentage of alfalfa seed that will grow can be easily determined by means of a simple tester. The seed should be thoroughly mixed, after which 100 or 200 seeds should be counted out. The seeds should be placed between two pieces of blotting paper or two folds of a piece of flannel cloth, care being taken that the seeds do not touch one another. The seed container should then be put on a plate, well moistened without saturating, covered with another plate inverted, and the tester then placed where the temperature can be kept at about 70 degrees Fahrenheit. After about three days the sprouted seed should be counted and removed each day until about the sixth, when most of the good seeds will have sprouted and the percentage that will grow can be determined. Some hard seed are occasionally present in a sample. These may be alive, but they require additional time for germination. In the case of Grimm alfalfa as much as 35 per cent of the seed is frequently hard.

NAIL HURTS ARE DANGEROUS

If Immediate Attention Is Not Given Wound May Cause Lockjaw or Permanent Lameness.

It is better to be safe than sorry! When a horse steps on a nail take no chances. Remove the nail as soon as possible and thoroughly cleanse the wound. When a horse limps investigate the cause. The removal of the nail can easily be accomplished with an ordinary claw hammer, a small block of wood being used as a fulcrum over which to pry. If the nail is not too large a pair of pliers is suitable for this work.

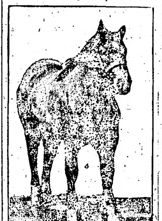
If not cared for immediately the wound may cause lockjaw or permanent lameness. For cleansing the wound a syringe and warm water may be used if care is taken to cleanse thoroughly. The best method is to apply liberally any coal-tar product, such as creolin, as it is effective in breaking up the infection. If a nail wound is given immediate and careful attention the life of a horse is usually safe.

SORE BACKS AND SHOULDERS

If Back Strap Pulls Out of Line, Unnecessary Strain Results and Horses Are Injured.

(By GEORGE H. GLOVER, Colorado Agricultural College, Fort Collins, Colo.)

Spring is here and so is spring plowing. If your horses get sore backs and shoulders, it is your own fault. There is a thought in this connection that is worth while and I want to call attention to it. It is about those back straps that go down to the tugs. Do not try to regulate the draft by tightening the back straps to the point where they will pull the tugs out of line. If they are even snug when hitched to the plow they will pull down hard on the back when hitched to a harrow. The work is hard enough on the team without the added burden of lifting the plow as well as pulling it. This weight comes directly over the loins where the back has no support from the ribs.



Splendid Horse for Farm Work.

WORKING IN SMALL GARDENS

Onion Sets and Lettuce or Radishes May Be Planted Together—Sow Spinach Between Cabbage.

(By LEROY CADY, Associate Horticulturist, University Farm, St. Paul.)

Where one has only a small space for the garden, it is well to work out a companion cropping scheme. For instance, onion sets and lettuce or radishes may be planted together. Three or four rows of spinach may be sown between rows of cabbage or cauliflower [illegible] out when [illegible] [illegible] together [illegible]

DAIRY

MILK SUBSTITUTE FOR CALF

Massachusetts Experiment Station Recommends Feeding Mixture Costing Three Cents Pound.

Nothing is better than milk on which to raise thrifty, growing calves, whether they are intended for the dairy, the feed lot or the show ring. The ordinary farmer often finds milk too expensive as a calf feed. The following substitute is recommended by the Massachusetts Experiment station: Twenty-two pounds ground oats, ten pounds linseed meal, five pounds middlings, 11 pounds fine corn meal, 1½ pounds fine blood meal, one-half pound salt. Total cost, three cents a pound.

Prepare by adding one-half pound of meal to two quarts of boiling water for each feed. At each feeding moisten the meal first with a little cold water to prevent it forming lumps, and then pour on the boiling water, and stir well. When this is cooled down to the temperature of milk fresh drawn from the cow it is ready to feed.

It is better to let the calf have whole milk for about a week, then gradually introduce a little of the milk substitute for ten days or two weeks, when you can cut out the milk entirely.

As soon as the calf will eat, let it have hay and a little of the meal dry, together with fresh water. Always have the calf meal mixture milk-warm when fed. Have the buckets clean and do not overfeed. A young calf will usually begin to eat hay at about three weeks old.

COW NEEDS RESTING PERIOD

Some Animals Maintain Good Milk Flow Right Up to Calving Time—Rest Is Important.

The dairying department of the New Jersey agricultural experiment station recommends that the dairy farmer should remember to give his cows a rest of six weeks or more before they freshen. Some cows may maintain a good flow of milk right up to calving time, and in such cases the dairyman hesitates to dry them off for a rest period of several weeks. This should be done, however, and the cow well fed so that she will be in good flesh when she freshens.

The work of producing a heavy yield of milk for ten months or a year is a severe strain upon the cow's strength and vitality, and a period of rest should be given her to recuperate and prepare for another lactation period. If she finishes her milking period quite thin in flesh, she should be given a longer dry period and more liberally fed. The loss of what milk the cow might produce during the dry period will be made up several times over by an increased yield during the following lactation period. A good rest and liberal feeding preceding the date of calving helps largely to bring about a good yield during the following year.

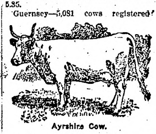
RECORD OF LEADING BREEDS

Jersey, Guernsey, Ayrshire and Holstein-Friesian Have 16,155 Animals Registered.

The following are the records of the four leading breeds of dairy cattle for the last year:

Jersey—6,146 cows registered; average yield, 7,816 pounds; average butterfat, 418 pounds; average per cent, 5.35.

Guernsey—5,081 cows registered; average yield, 8,848 pounds; average butterfat, 441 pounds; average per cent, 4.97.



Ayrshire Cow.

Ayrshire—2,186 cows registered; average yield, 9,447 pounds; average butterfat, 372.9 pounds; average per cent, 3.94.

Holstein-Friesian—2,742 cows registered; average yield, 14,619 pounds; average butterfat, 504 pounds; average per cent, 3.4.

Troubles.

It's easier to be philosophical about other people's troubles than it is to be quiet about our own.

Good and Bad.

GRAIN TESTER FOR ALFALFA

Percentage of Germinating Ability Easily Determined by Method Described Herewith.

(From the United States Department of Agriculture.)

The percentage of alfalfa seed that will grow can be easily determined by means of a simple tester. The seed should be thoroughly mixed, after which 100 or 200 seeds should be counted out. The seeds should be placed between two pieces of blotting paper or two folds of a piece of flannel cloth, care being taken that the seeds do not touch one another. The seed container should then be put on a plate, well moistened without saturating, covered with another plate inverted, and the tester then placed where the temperature can be kept at about 70 degrees Fahrenheit. After about three days the sprouted seed should be counted and removed each day until about the sixth, when most of the good seeds will have sprouted and the percentage that will grow can be determined. Some hard seed are occasionally present in a sample. These may be alive, but they require additional time for germination. In the case of Grimm alfalfa as much as 85 per cent of the seed is frequently hard.

NAIL HURTS ARE DANGEROUS

If Immediate Attention Is Not Given Wound May Cause Lockjaw or Permanent Lameness.

It is better to be safe than sorry! When a horse steps on a nail take no chances. Remove the nail as soon as possible and thoroughly cleanse the wound. When a horse limps investigate the cause. The removal of the nail can easily be accomplished with an ordinary claw hammer, a small block of wood being used as a fulcrum over which to pry. If the nail is not too large a pair of pliers is suitable for this work.

If not cared for immediately the wound may cause lockjaw or permanent lameness. For cleansing the wound a syringe and warm water may be used if care is taken to cleanse thoroughly. The best method is to apply liberally any coal-tar product, such as creolin, as it is effective in breaking up the infection. If a nail wound is given immediate and careful attention the life of a horse is usually safe.

SORE BACKS AND SHOULDERS

If Back Strap Pulls Out of Line, Unnecessary Strain Results and Horses Are Injured.

(By GEORGE H. GLOVER, Colorado Agricultural College, Fort Collins, Colo.)

Spring is here and so is spring plowing. If your horses get sore backs and shoulders, it is your own fault. There is a thought in this connection that is worth while and I want to call attention to it. It is about those back straps that go down to the tugs. Do not try to regulate the draft by tightening the back straps to the point where they will pull the tugs out of line. If they are even snug when hitched to the plow they will pull down hard on the back when hitched to a harrow. The work is hard enough on the team without the added burden of lifting the plow as well as pulling it. This weight comes directly over the loins where the back has no support from the ribs.

Splendid Horse for Farm Work.

WORKING IN SMALL GARDENS

Onion Sets and Lettuce or Radishes May Be Planted Together—Sow Spinach Between Cabbage.

(By LEROY CADY, Associate Horticulturist, University Farm, St. Paul.)

Where one has only a small space for the garden, it is well to work out a companion cropping scheme. For instance, onion sets and lettuce or radishes may be planted together. Three or four rows of spinach may be sown between the rows of cabbage or cauliflower and cut out when large enough. Many such [illegible] vegetables [illegible]

DAIRY

MILK SUBSTITUTE FOR CALF

Massachusetts Experiment Station Recommends Feeding Mixture Costing Three Cents Pound.

Nothing is better than milk on which to raise thrifty, growing calves, whether they are intended for the dairy, the feed lot or the show ring. The ordinary farmer often finds milk too expensive as a calf feed. The following substitute is recommended by the Massachusetts Experiment station: Twenty-two pounds ground oats, ten pounds linseed meal, five pounds middlings, 11 pounds fine corn meal, 1½ pounds fine blood meal, one-half pound salt. Total cost, three cents a pound.

Prepare by adding one-half pound of meal to two quarts of boiling water for each feed. At each feeding moisten the meal first with a little cold water to prevent it forming lumps, and then pour on the boiling water, and stir well. When this is cooled down to the temperature of milk fresh drawn from the cow it is ready to feed.

It is better to let the calf have whole milk for about a week, then gradually introduce a little of the milk substitute for ten days or two weeks, when you can cut out the milk entirely.

As soon as the calf will eat, let it have hay and a little of the meal dry, together with fresh water. Always have the calf meal mixture milk-warm when fed. Have the buckets clean and do not overfeed. A young calf will usually begin to eat hay at about three weeks old.

COW NEEDS RESTING PERIOD

Some Animals Maintain Good Milk Flow Right Up to Calving Time—Rest Is Important.

The dairying department of the New Jersey agricultural experiment station recommends that the dairy farmer should remember to give his cows a rest of six weeks or more before they freshen. Some cows may maintain a good flow of milk right up to calving time, and in such cases the dairyman hesitates to dry them off for a rest period of several weeks. This should be done, however, and the cow well fed so that she will be in good flesh when she freshens.

The work of producing a heavy yield of milk for ten months or a year is a severe drain upon the cow's strength and vitality, and a period of rest should be given her to recuperate and prepare for another lactation period. If she finishes her milking period quite thin in flesh, she should be given a longer dry period and more liberally fed. The loss of what milk the cow might produce during the dry period will be made up several times over by an increased yield during the following lactation period. A good rest and liberal feeding preceding the date of calving helps largely to bring about a good yield during the following year.

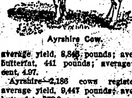
RECORD OF LEADING BREEDS

Jersey, Guernsey, Ayrshire and Holstein-Friesian Have 16,155 Animals Registered.

The following are the records of the four leading breeds of dairy cattle for the last year:

Jersey—6,146 cows registered; average yield, 7,816 pounds; average butterfat, 418 pounds; average per cent, 5.35.

Guernsey—5,081 cows registered; average yield, 8,848 pounds; average butterfat, 441 pounds; average per cent, 4.97.



Ayrshire Cow.

Ayrshire—2,186 cows registered; average yield, 9,447 pounds; average butterfat, 372.9 pounds; average per cent, 3.94.

Holstein-Friesian—2,742 cows registered; average yield, 14,619 pounds; average butterfat, 504 pounds; average per cent, 3.4.

Troubles.

It's easier to be philosophical about other people's troubles than it is to be quiet about our own.

Matches of Hemp.

In the use of early firearms a match consisted of a cord of hemp or similar material treated with niter so that it continued to smolder after it had been ignited. The match was attached to the cock of the musket and brought down by the action of the trigger on the powder priming.

How They Work.

In an argument against fanaticism the late General Funston said to a correspondent: "Even the looking glass and the wine glass have their uses. The looking glass reveals our defects to ourselves; the wine glass reveals them to others."

Persistent.

"You wouldn't kiss a girl against her will, would you?" asked the leap-year maiden. "No, I would not." Then she tried another approach. "Would you resist very much if a girl tried to kiss you?"—London Answers.

Plainly Not.

New York judge rules wives may frisk their sleeping husband's trousers, if the husband fails to turn over a fair portion of his weekly wage. And then they say this is man's world.—Milwaukee Sentinel.

Reading Print.

It is more difficult to read a line of print when the upper half is covered than when the lower half is covered. Try this and see for yourself.

Married Life.

Married life is a game of questions and answers. It's the wise man who asks few questions, and a wiser one who gives brief answers.

The Eligible Class.

Milly—"I would only marry a man who has lived and suffered." Billy—"I suppose what you want is a widower."

Degrees of Warmth.

We bow to an emergency and embrace an opportunity.—Kansas City Journal.

How Moving Signs Work.

In a general way, the mechanism of a moving electric sign is like the old-time music box drum, filled with pins. As the drum revolves the pins make the contacts at determined intervals, and the illusions of revolving circles of light, bird effects and designs almost without limit are produced.

Nothing New.

The Lawyer—"Don't you think $40 a week alimony is a little too much to demand when he's only making $50?" The Lady—"No, I don't. That's what I used to make him gimme while I was livin' with him."—Boston Transcript

Limit of Dishonesty.

Harduppe—"What is your opinion of Flubdub's honesty?" Borrowell—"Mighty poor. He actually came around to my house and stole an umbrella I had borrowed from him."—Life.

Very Deep.

Four-year-old Lucile, in great excitement—"Oh, mamma, come and see the big hole George and I digged in the the sand. It's more'n a foot deep. It's a foot an' a leg."

Worst Thing About Work.

"De hardest thing about work," said Uncle Eben, "is de worry it puts you to when you try to dodge it."—Washington Star.

Skate Fish.

There is a fish of the skate family which can inflict an electric shock severe enough to knock a man down.

Warning.

I hereby notify the party or gentleman who left me a gold watch at the depot in Goodridge last August to come and call for same and identify it or it will be sold.

CARL WALLENBERG,
Goodridge, Minn

Maybe Not!

Tactful Friend—"A hold-up man has just shot and killed your husband, ma'am, but he had just deposited the day's receipts, so there is nothing lost!"—Town Topics.

The Big Eater.

He (despondingly)—"My dear, we really must economize. Now, what can we get along without?" She—"I really don't know, Frank, unless it's your appetite."

KISMET

By SUSAN E. CLAGETT.

The air was filled with the perfume of roses, and the morning breeze that blew the curtains to and fro wafted the delicious fragrance through the open window into the room. A little child was seated on the floor burying a white kitten under a heap of the blood-red petals she had pulled from the stems scattered about. Near her lay a doll. Beside it, an array of clothes ready for use when its mistress remembered what was due to respectability.

Watching the group with listless eyes was a woman, stretched with an invalid's inertness upon a couch. She was half listening to the child's low talk when she caught the sound of a step in the hall. A faint color rose to her face to disappear even before the door opened to admit a man, quick and alert in movement, whose keen eyes softened to a marvelous gentleness as he looked toward her.

Then he turned and took the slender hand of the woman into his strong, warm clasp. With professional quickness he noticed the irregular pulse, the heavy eyes, and said gently:

"You did not sleep last night."

"No," she answered, a wave of color flooding her face as she met his eyes.

He sighed heavily. Rising, he went to the window, where he stood looking with unseeing eyes into the beautiful garden.

"You gain no strength," he said at last; the misery in his heart told in the sudden strain of his voice. "I see it every time I come. If I thought my leaving would be your gain. I would go within the hour, but you need me as a physician, a friend, a companion.

"Margaret," he continued, "happiness would be everything to you. Why will you put it from you? You need my love and care and the peace that will come from complete self-surrender. What is the use of this opposition? It is killing you. My life is a torment seeing you slowly but surely drifting from me. It is the constant effort to keep the barrier between us that tells upon your strength. God knows I think first of you. You harm no one by coming to me. You are alone as well as I, and hearts can be starved, as well as bodies, only some take longer to die than others. Will you be brave and come to me?"

"And Edith," she asked gently.

"Edith!" he said hoarsely, his hard won composure shaken by the name. "Fifteen years of separation leave me virtually free. She left me within a week of our wedding day. But you know the whole miserable story, the story that should have been told to me before our marriage. Margaret, are you going to let it spoil our lives?"

"Max, would that be at peace, if I did as you wish?" she asked simply, as she placed his hand over her laboring heart. "Could happiness continue where there would be regret? Try as I would to hide it, your love would find it out and you would be as miserable as I."

"Auntie, what does Doctor Max want you to do?" That forgotten child slipped between them and threw an arm across the frail figure.

"He wishes me to go away with him, dear."

"Will you?" Ruth questioned in sudden fear.

"No, sweetheart."

With a little laugh of relief the child resumed her play and the man quietly left the room.

Hours later the moon shimmered across the flower-scented room and rested gently upon a fair, white face. Half concealed in the shadow, his face hidden, knelt the man who had worked as never before to save the woman he loved. He had conquered. Patience and skill had won, and as he knelt, haggard and exhausted from the strain, a great thankfulness filling his heart, he murmured low-voiced words that carried strength and the will to fight for health to the girl, as yet too weak to do more than smile.

The turning of the doorknob and the rustle of the nurse's dress brought him to his feet. As he moved backward his eyes caught the edge of a crumpled paper lying upon the floor. Picking it up he re-read the words that had changed the current of his life.

For fifteen years he had been alone. At the age of twenty-five he had married and less than a year thereafter had placed his wife in a sanitarium, hopelessly insane. For twelve of the fifteen years he had lived his life as he could, filling it with his profession, with reading. Then he met Margaret Wilcox. After that it was chaos.

He had told her his story at the beginning of their acquaintance knowing that with her, as with himself, love had come unsought. But until that hour of yesterday reason had held in check words he had no right to speak.

He relived that hour as he looked absently at the paper in his hand. It had been handed to him as he entered her room to fight with all his skill for her flickering life. At the time the words had made little impression upon a mind concentrated upon the struggle before him. But now their full significance flashed upon his brain and he reread the few words that were written upon a telegraph form:

"Dr. M. C. Steward, New Orleans, La. Your wife died two days ago. Owing to heavy storms were unable to communicate with you before.—Chicago, Ill."

CIVIL ENGINEER

Copyright by Fleming H. Revell Company

SYNOPSIS.

CHAPTER I—Bertram Meade is consulting engineer representing his father, the great Meade, who is the designer of the international bridge, the greatest cantilever structure the world has ever heard of. In the shadow of the uncompleted bridge young Meade receives Colonel Illingworth, president of the Martlet Bridge company, the constructors, and the colonel's daughter, Helen, whom he loves.

CHAPTER II—At dinner the possible weakness of the compression members of the bridge is talked of and Meade defends his father's calculations.

CHAPTER III—Meade and Helen go out upon the bridge in the moonlight and Helen narrowly escapes a fall to the river below. Meade tells his love and they go to the colonel, who approves their marriage when the bridge is finished.

CHAPTER IV—Abbott, the construction engineer, tells Meade there is a deflection in member C-10-R, but makes light of it. Meade, after vainly trying to stop the work, wires his father and follows the telegram to New York.

CHAPTER V—At the great engineer's office father and son try to prevent disaster, but young Meade only reaches Colonel Illingworth as a message comes that the bridge, with 150 men, is in the river.

CHAPTER VI—Abbott goes on with the work, ignoring Meade's protests, but while uneasily inspecting C-10-R the lacings snap under his eyes and he goes into eternity with the other men on the falling bridge.

CHAPTER VII—Young Meade has pointed out to his father the possible weakness, but his objections have been overruled. His father now prepares a statement showing his own fault and sends his secretary, Shurtliff, to the Gazette with it.

CHAPTER VIII—Young Meade, on his return, meets Rodney, an old college friend, and other reporters at the door of his father's office. He finds his father dead from heart failure. He assumes entire responsibility for the catastrophe. Shurtliff, who has not obeyed orders, but concealed the papers the dead man had given him to make public, also accuses the younger Meade.

CHAPTER IX—In her father's presence and over her protest Meade breaks his engagement with Helen.

CHAPTER X—Out West, at a big irrigation dam under construction, Meade begins life over again as a rodman under an assumed name.

CHAPTER XI—Meade has gone to the ranch of Winters, a college friend, and there taken stock of himself and the terrible responsibility he has assumed to save his father's name from dishonor. He makes the new start as an unknown.

CHAPTER XII—Helen and Rodney conspire to save Meade from his own false confession in spite of himself. Shurtliff has been employed by the colonel and Helen, thinking he knows the truth, sets out to win his confidence.

CHAPTER XIII.

Working Up.

The autumn went by as a dream. Winter, warm and mild in that far southern clime, was at hand before Meade realized it. An ordinary engineer of half the ability of Bertram Meade, so suddenly reduced to the ranks, would have chafed against the position of subordination and would have resented the humble duties with which he was charged. But Meade was happy to be following, even in this extremely modest way, the profession that he loved. And he did his unimportant work with zeal and care. It is not much to say, but he was the most efficient of the junior engineering force on the dam.

It was not because Meade was unsocial that he kept to himself—not at all. From his own galvanized-iron quarters he used to stare longingly at the men grouped around the big campfires, for the nights were growing chill, smoking and laughing, exchanging experiences and telling stories. Nothing would have pleased him better than to have joined in, and he could have told stories and related experiences that would have been unique even in that gay crowd of young adventurers. But he did not dare. He feared to betray himself. What he wanted above everything was to preserve his incognito. It would be fatal to his chances of ever working up to anything worth while if they found out who he was.

And he had a tremendous pride to sustain him. They respected him now. As a matter of fact, they put his withdrawal of himself down to vagaries of temperament or causes they could not imagine, and they grew rather to like him even as they left him alone. And a few of the men of the humbler sort to whom he had been kind on occasion, and helpful, were stoutly devoted to him.

The idleness of an aimless life did not appeal to him even in his off-duty periods. Doing nothing had no attraction. He could not get relief that way. Even rambling alone about the hills would not serve. So quick and active a man, so vigorous and buoyant a spirit, so strong a body and mind were not calculated for aimless wandering.

Meade was a very accomplished engineer indeed. There was no branch of the art about which he did not know a little, although hydraulics and structural steel were the things that most appealed to him. He got relief in the duality of his affections for these branches of his profession. Neither one of them ever palled on him, because he did not work monotonously at either of them. He had a natural instinct for [illegible]

He Had a Natural Instinct for Topography.

eighth of a mile long at the bottom and touched the receding hill on one side and the spur of Spanish mesa on the other at the top—a huge mound of earth with a clay core extending from side to side at the narrowest part of the valley. When completed it would be 125 feet high above the old river bed, with a roadway 20 feet broad on top of it. Below the dam and on the low ground between the mesa and Baldwin's knob the camp, with its galvanized iron shops, bunkhouses, dining halls, kitchens and officers' quarters, had been erected. The configuration of the ground was such that, although it was unusual to put them there, convenience had rendered it desirable in this case.

It was intended to complete the dam before the early spring of next year, which was, if any time in the country could be so characterized, the rainy season. Of course, just as soon as the dam had begun to rise, the flow of the Picket Wire below it had been stopped, except when an occasional freshet had been allowed to pass the undersluice. It was known that the run-off of the river in the rainy season of some years was so small as scarcely to fill the reservoir, and it had been decided to store all the flow of the autumn and winter so that even if the spring rainy season were deficient, the beginning of the next summer would find the reservoir full and the new irrigation system could commence operations successfully.

Vandeventer, like the lost Abbott of the International, was also a driver, who spared neither his men nor himself. The work had proceeded with astonishing rapidity, although this was partially accounted for by the fact that the spillway, which should have occupied their attention, had as yet been only partially excavated. Now, to those ignorant of engineering, an earth dam may seem a temporary expedient, although most of the great irrigation dams of the world are of that character; and everybody knows that if the water should rise high enough to overflow an earth dam it would not last longer than it takes to describe its utter giving way. A flood would sweep it out of the way at once.

The device whereby possible floods are controlled and such dangers averted, consists of a broad channel at one side of the dam, and at such a distance below its crest that if, through any mischance or natural happening, such as the failure of the sluice gates, excessive rains, cloudbursts, or floods, the height of the water is increased until it promises to overflow the dam, this opening will carry off the surplus harmlessly. An earth dam without a spillway would presage almost certain destruction to all who lived in the valley below it.

In the case of the Picket Wire dam, the spillway had to be cut and, in part, blasted out of the mountain side—that is, through the spur of the mesa, which reached down from its high wall towards the narrows. There had been a series of blunders and mishaps, which included the explosion of a shipment of dynamite on the railroad, with very disastrous consequences to accompanying rock crushers and mixers, and other machinery. The spillway had not been completed. Its opening should have been about twelve feet below the level of the dam. Vandeventer was not responsible, of course. The chief engineer had fumed and protested, but had been directed by headquarters to go ahead with the other work and tackle the spillway later. There was, indeed, little reason to hold up the building of that particular dam because of the noncompletion of the spillway.

That was a country, so the most devoted inhabitants freely admitted, in which it was always safe to bet that it would not rain, no matter how threatening might be the appearance of the sky; for in ninety-nine times out of a hundred the negative would win the bet. Said inhabitants did not say the hundredth time might compensate for all the other failures. The weather was like the little girl with the proverbial curl—when it did rain there was no doubt in anybody's mind as to the fact. Sometimes the fountains of the great deep, which, in Holy Scripture at least, extended overhead, would be broken open and the violence of the fall and the quantity of it, and suddenness of it, would be such that the Western [illegible]

of the Picket Wire and in the plain beneath carefully tabulated reports of the rainfall for years had been considered by the engineers. They had chosen the right season for the building of the dam, but when its crest began to rise above the designed level of the spillway the delay in opening the channel gave cause for some alarm. It is not the probable or certain that is feared. An old version that, of "omne ignotum pro magnifico"—it is only the unknown of which men are afraid, or only the unknown to be feared. Still there was nothing Vandeventer could do but obey orders and go ahead. The danger, after all, was trifling. Another consequence of the waiting was that in his inability to work on the spillway, he had more hands to devote to the dam and it rose the quicker.

The shape of the country behind it was such that when the Picket Wire flowed with sufficient volume to fill it, a long lake going back through the valley, or canyon, and twisting among the hills for some miles would result. In other words, the dam would make a beautiful artificial sheet of water bordered on one side by a high range of hills, on the other by the dam, and on the third by the hills and the low hogback above Spanish mesa, which separated the Picket Wire valley from the Kicking Horse gorge up which the railroad ran.

Buried in his own thoughts, communing with himself, considering ceaselessly his position, dreaming of the woman he loved, planning a new career, Meade yet explored every foot of the valley and ravine. He climbed to the top of Spanish mesa, and from its height the whole country clear up the valley to the main range was visible to him. He could look down into the deep ravine of the Kicking Horse, and note the marvelous beauty and airiness of the arch bridge for all it so solidly carried the heavy freight trains of the railway.

He could see far up and around the crooked course of the Picket Wire. The big grass-covered, but otherwise bare and treeless hogback, that ran from the upper end of the stone island of the mesa was equally visible to him. As it was the low tide of the new reservoir, he descended to it and studied it carefully. On another occasion, having said nothing to anyone about his excursion, he took advantage of a half-holiday to go out and inspect the hogback and ascertain its elevation with relation to the dam. Of course the engineers who planned the great irrigation works had done that, but he wanted to do it for himself. At one place, where the distance between what might be called the edge of the valley and the head of the ravine was narrowest—indeed, he estimated after pacing it that it measured not over twenty feet across—he discovered that the rounded earth crest was slightly lower than the intended level of the top of the dam.

When he returned to the office, he found on examining the construction drawings that an earth dike was planned to run along the hogback so that the top level should be higher than that of the dam. This dike would be only a hundred and fifty feet long and a few feet high, and could be built in a few days' time. Work on the main dam being more important, nothing had as yet been done on the dike.

Meade had been promoted toward the end of the fall and in a rather unusual way. One of the transit men, a young engineer, got a better job and left his instrument. Vandeventer called Meade before him.

"Roberts," he said, "there's a vacancy for a transit man. You've done such good work so far and shown such familiarity with fieldwork, that I'd give it to you if I had any idea that you knew anything about handling instruments."

"I think I may be trusted with one, sir," answered Meade, his eyes brightening.

"Yes, perhaps; but I have watched you in odd hours. The young men around here are constantly practicing with the transits. I've never seen you put a hand to one. How about it?"

"I'm not exactly a youngster, Mr. Vandeventer," returned Meade, "and I really didn't think it necessary to practice, but if you trust me with one I believe I can manage it."

Old Vandeventer leaned back in his chair in the office and looked carelessly away from Meade to all appearances. He clasped his hands back of his head and seemed lost in thought. Suddenly he began humming a little scrap of verse about another college which Cambridge men sing with zest:

> I'm a physical wreck,
> From the grand old 'Tech',
> But a h—— of an engineer!

He stopped abruptly, whirled about in his swingchair, and shot a quick glance at Meade. It was a trap. And as he sprang it Vandeventer surprised the ghost of a smile, repressed quickly but there, on Meade's lips. The chief engineer was satisfied. Before this, little things had betrayed a fellow alumnus, or at least a fellow student of the old Lawrence Scientific school. Vandeventer was pleased at his adroitness. He did not, however, refer to it.

"There's a new transit in that box on the floor there," he said, resuming his indifferent manner. "I've had the case opened, but I haven't taken it out. Get it, and we'll go outside and see what you can do with it."

Now a transit, for all it is used in rough fieldwork, is one of the most expensive and delicate of instruments. It is capable of the most accurate adjustment [illegible]

constructed in accordance with the principles which experience has shown to be necessary, and each one is especially fitted to the particular instrument to be contained therein. The box is a complicated thing and the transit cannot be taken out or replaced except in one way. With a knowledge of the combination, so to speak, it is comparatively simple to take a transit from the box; without that knowledge, which none but an expert transitman, or the packer himself can have, it is rather difficult without running a risk of ruining the instrument.

This command was another of Vandeventer's tests, therefore. Meade knew this as well as his superior. In spite of himself, he would have to betray his familiarity. Well, he had brought himself to the conclusion that he could not continue his work without very soon disclosing the fact that he had been an engineer. And in case of the inevitable, the sooner the better. So long as he had to betray himself, he would have all the advantages as well as the disadvantages. He unlocked the door of the box, slid the instrument out quickly, accurately, without a moment's hesitation, and rapidly unscrewed the head from the slide-board, and screwed it carefully on the tripod. Vandeventer's eyes sparkled.

"Come outside," he said, leading the way to the side of the hill, "and set it up there over the tack in that stake and level it."

Beginners have been known to take ten minutes to get a transit set up, leveled and centered. It is good work if it is done inside of a minute; thirty seconds is very fast. In forty-five seconds Meade reported, "all ready, sir." He could have done it in less, but he was a little out of practice, he said to himself.

"Look here," said Vandeventer, "you can't pull any more bluff on me, Roberts; you're an engineer, all right."

"I know something about the practical side of it, sir," answered Meade, turning a little pale and wondering how far Vandeventer would press his questions and what he would learn.

But the engineer was a man.

"Practical, yes, and theoretical too, I'll be bound, but I don't seek to pry into your antecedents. It's enough for me if you do good work for me here."

"I'll do my best, sir."

"Good; the instrument is yours."

That was the first step and the next step came very shortly after, when, having further demonstrated his capacity in other ways, Meade was given charge of the work on the east end of the dam.

"I don't care who he is," said Vandeventer to his chief subordinate, "he knows what he's about, and if you watch him you'll see. He's keen on handling men. The other section foremen will be hard put to keep up with him. He keeps watch on himself. He's got some secret he won't betray. He doesn't mingle with the crowd, but every once in a while something slips out. What he doesn't know about engineering nobody needs to know, I'll wager."

"How do you account for his being out here?"

"Oh, it's the old story, I suppose; he's come a cropper somewhere—down and out and wants to begin again, and can't do anything but this. It's not our business, Stafford; he does good work for us and we're satisfied."

CHAPTER XIV.

The Former and the Latter Rain.

The work on the dam was progressing splendidly. Vandeventer, driving his men hard, shared in all their furious efforts. He was not only their leader, but their inspiration. He had surrounded himself with a body of able assistants, and his teamsters and workmen had been culled until they had become a small army of picked men of which to be proud.

Among all these Meade stood very high. In the four months he had been with Vandeventer he had shown such a grasp of things, such an ability to handle men, in one or two instances when, with intention to try him, the resident engineer had given him charge of some special work, that Vandeventer unconsciously looked to him in any emergency. He actually found himself consulting Meade on occasion.

He had accompanied the younger man on [illegible]

He Had Accompanied the Younger Man on One of His Rambles.

Vandeventer was not unknown in engineering circles. In earthwork he was by way of being an authority. His experience had been varied and extensive. Meade's reserve and reticence rather hurt the older engineer. He had invited confidence and had even given his affection. He intimated delicately that if the other were under a cloud Vandeventer might be in a position to help him.

It was fortunate for Meade's purpose of concealment, for his incognito, that most of his engineering work had been done abroad and that he had been out of touch with American engineering for practically the whole of his career. Vandeventer was a Harvard man, too, and that made it especially hard for Meade to keep from betraying himself. As a matter of fact, the younger man actually longed to make a clean breast of it, but he could not quite bring himself to do it yet. That might come later.

Three months ought to see the completion of the dam and the long canal, which was to carry the stored water to the irrigation ditches below. Vandeventer was already making plans for another big job, and he had decided, in his own mind, that among the subordinates whom he would take with him the newcomer should have the first chance. Vandeventer felt proud and satisfied when he surveyed the work that had been accomplished in the six months of labor. To be sure the delay in the completion of the spillway disquieted him a little.

The dam had reached the spillway level a fortnight before, and had now passed it. Indeed, on the fifth of January the dam-builders were within five feet of the top; that is, the crest of the dam was 120 feet above the level of the valley. They had planned to run the spillway around the eastern end of the dam. The rock drills and dynamite which had been ordered had finally arrived in December, and by putting as many as possible to work on the spillway Vandeventer had succeeded in opening it for its entire width to an average depth of about seven feet below the intended top of the dam; that is, it was now about two feet deeper than the actual crest of the dam, but it still lacked five feet of its designed depth.

The rainy season, an inspection of the records had shown, was not due for a month and a half yet. That would give him ample time to complete the dam and the spillway. This year, however, there had been some very unusual rains during the fall and the water back of the dam was now 98 feet deep, which made it 22 feet below the level to which the dam had risen and 20 feet below the spillway. This was much more water than anyone had dreamed would be in the reservoir at that time, and was perhaps more than should have been allowed. Still there was a safety margin of 22 feet, which Vandeventer was sure would be ample. The financial promoters of the project were very anxious to have the reservoir full when the irrigating season opened, and the engineer's judgment had been influenced by their eagerness to get it working.

The broad sheet of water ran back into the valley for many miles. In fact, the dam had transformed the country into a beautiful lake. Sometimes it rained in the mountains when it did not rain down in the valley, and there was a constant, if very small, rise in the level. Vandeventer personally carefully gauged the water every day. Naturally he had noted that it rose gradually, but as the dam rose proportionately more rapidly, he was not uneasy. Yet, as a good engineer, he was watchful and largely because of the unfinished spillway he urged the men to the very limit.

The weatherwise from the town, who sometimes rode up to inspect the work, assured Vandeventer that it could not possibly rain before March, and the mere fact that so much water had fallen rendered it more improbable that any more would come down. But at three on the afternoon of January sixth it suddenly began to rain hard without warning and with no premonition on the part of anybody. It was not one of those terrible downpours known as cloudbursts, but it was an excessively hard, steady rain. The heavens over the range were black with clouds and so far as anyone at the dam could see, it was raining from the crest of the mountains down. There were some anxious discussions in the dining room of the resident engineer and his American assistants.

At four o'clock it was decided to open the undersluice gate about halfway, but when this was done the volume of water it was capable of discharging was too small to help very much, and on opening it to its fullest extent the velocity of the water rushing through was so great that the river bed was rapidly scoured out. For fear of undermining the toe of the dam it was necessary partially to close the sluice once more.

The water was rising, first at the rate of three or four inches an hour, then half a foot, and finally nearly a foot. By six o'clock that night it had risen two feet. It was still raining hard at that hour, although not quite so furiously as it had been. If it did rain until morning at the present rate, there would still be a margin of safety of perhaps fourteen or fifteen feet at dawn. Although the situation required watchfulness and was somewhat alarming, it was not desperate. The men were advised to put in all the time in their bunks so as to be good and ready for the hard battle which might come in the morning [illegible]

Vandeventer, however, could not sleep. The rain kept up steadily all night. The resident engineer finally got up and dressed himself, and protected by high rubber boots and a cowboy slicker and a sou'wester, left his quarters and went out to inspect the dam. He carried a lantern, of course, for it was pitch dark and, if possible, the rain dropping from the black sky made it more difficult to see.

He was surprised when he got to the dam to see on the other side another lantern. Closing the slide of his own lantern to prevent observation, and being on familiar ground, he went straight toward the other side. The noise of the rain subdued any sound that he made, and he was able to come quite close to the other light without being noticed.

The lantern was standing on the roadway on top of the dam. A man was kneeling beyond it, his figure seen dimly in the faint light of the lantern. He was staring intently down the front of the dam at the water. The lantern was near the edge and it faintly illuminated the black, rain-lashed surface below. Vandeventer realized with a shock of horror how much more rapid the rise had been. A quick estimate convinced him that the level of the water was now within eight or nine feet of the dam—and it was still raining!

A Man Was Kneeling Beyond It.

The face of the kneeling man was hidden by a sou'wester and he had on a heavy black rubber raincoat. Vandeventer reached over and touched him on the shoulder.

"What are you doing here?" he asked.

The kneeling man sprang up with an exclamation. It was Meade. The relief in Vandeventer's mind was great at the recognition.

"I just came out to look at the water. I couldn't sleep with all that pounding on the iron roof of the quarters, so I dressed and came out."

Vandeventer opened the slide of his own lantern and threw the light on the reservoir.

"It's risen eight or ten feet since we saw it, and with this rain—"

"It's not coming down so hard as it was when I first came out here," said Meade. "I think you can see it slackening yourself."

"Yes," said the resident engineer, listening a moment, "I believe it is. If it stops now," he continued thoughtfully, "we ought to be safe."

"Yes, I think so," answered Meade.

In the night alone, together in that crisis in their fortunes, the two men were interchanging thoughts and ideas on terms of perfect equality. It did not occur to Vandeventer to question why, and that they were doing so aroused no surprise in the mind of Meade.

"Of course," continued Meade, "even if it does stop raining we'll continue to get a lot of runoff from the watershed for some time."

"Yes," said the resident engineer, "that of course, but if the rain stops everywhere we can scarcely have a rise of more than five or six feet, and that would still be a little below the spillway."

"It's stopping here now," pointed out Meade, and, indeed, the force of the downpour was greatly diminished.

The two stood watching the dam and the black lake beyond it in silence for a few moments until the rain practically ceased. The air was misty and heavy with moisture, but the rain was certainly over for the time at any rate.

"Thank goodness," said the resident engineer in great relief. "Now if it's stopped everywhere we'll be all right."

"Yes," said Meade, "and I'm inclined to think it has stopped everywhere. Whoever thought it would rain in January here? There hasn't a drop, to speak of, fallen in January for twenty years, or since there have been any records. Why in heaven's name it had to come now I don't see."

"Look here, Roberts," said Vandeventer suddenly, "you know you're a first-class engineer."

Meade shook his head.

"You can't fool me," said the older man. "I've watched you. You know more about the game than anybody here except myself. You don't choose to confide in me, although I like you, and I am in a position to help you."

"I appreciate what you say, Mr. Vandeventer," returned the other. "Once [illegible]

Morg. Vaughan, went to Thief River Falls Monday evening. to attend a patriotirm rally, which was being held there that evening

Jesse LaBree, came up from Thief River Falls Monday to conduct an auction sale for Jacob E. Lee, in town of Reiner.

A. C. Tvedt went to Thief River Falls Monday to see about some ditch matters. From there he went to Warren on the same mission.

Harry Van Tassel, returned Monday from near Plummer, where he had been with some horses for M. O. Seavey.

Henry and John Morken, of Carmel topped over here Tuesday evening while enroute for their home from Thief River Falls.

FOR SALE—350 bushels of seed wheat. Inquire of, John T. Homme, 3 miles East and ½ mile south of Highlanding.

Arthur Tvedt, returned to his studies at the Thief River Falls high school Monday morning, after spending the week's spring vacation at his home here.

Miss Sarah Payne returned to Thief River Falls Monday morning, to resume her studies at high school after spending a week's vacation at her home here.

There will be preaching Services next Sunday morning at eleven o'clock April 22nd by Rev. Barackman of Duluth, All are cordially invited to attend.

Will sell or exchange for propety in Thief River Falls the following land, Lot 4 in Section 30 and Lots 1, 2, 3 and NE¼ SW¼ in Sections 31-155-39.
H. O. Kjomme, Thief River Falls, Minnesota.

For Sale Cheap.

One 18-35 Horse power Titan tractor used two seasons, in good condition.

One 20 inch, two bottom brush breaker, used one year.

One six bottom Oliver Engine gang.

One 24 inch Rumley brush breaker.

All for $2500.00. 8 per cent discount for cash before April 25th.
T. J. Lillevold,
Grygla, Minn.

Notice.

I will receive bids up to 7 o'clock P. M. on the 7th day of May, 1917, for 2 acres of land to be used as a Cemetery for the Village of Goodridge and vicinity, not any further than 2 miles from City limits.

The Council reserves the right to reject any or all bids.
C. H. Christianson,
Village Recorder.

For Rent.

The Bernt Johnson quarter, the NE¼, of Section 4, Township of Highlanding. About 130 acres under cultivation.

Also other farms for rent,
Inquire at Goodridge State Bank

Warning.

I hereby notify the party or gentleman who left me a gold watch at the depot in Goodridge last August to come and call for same and indentify it or it will be sold
CARL WALLENBERG,
Goodridge, Minn.

Notice:

There will be a joint business meeting of the two Norwegian Congregations of Goodridge, Wednesday April 25th, 1 o'clock P. M., for the purpose of either accepting or rejecting the proposed Constitution formend by the appointed committee.

Every voting member is urged to be present as this will be very important for the future. The ladies of the above named congregations will serve coffee and lunch at the church for the benefit of the church.

Home Talant Play A Big Success.

The home talent play, entitled "Kinding the Hearth Fire", which was given by the members of the Goodridge Literary Society, in the school house was a big success from every standpoint. The school room was fairly well filled with people anxiously waiting for the curtain to rise. The play was a good one from start to finish and brought out very forceably the beauty of farm life and the evils young people from the country have to meet when they go to the city to work Those who took part in the play are to be commended for the very efficient manner in which they handled their parts. Prof. A. O. Halverson deserves credit also, for the able manner in which he coached the members of the play. The numbers between acts were very good and was enjoyed by all present. A neat little sum of money was realized, which will go to the piano fund of the local school.

On Saturday evening, the members of the play, accompanied by about seven auto loads, journeyed to Grygla, where the play was staged before a full house. The audience was interested as soon as the first act commenced, and remained so during the play, for at any time during the performance, you could have heard a pin drop. After the play was over a social dance was indulged in by nearly all present and was very much enjoyed by all, excellent music being furnished by the Grygla orchestra.

Much praise is due to the people of Grygla for the courteous treatment given us. for the articles loaned us for use in the play and for their liberal patronage. Should they ever decide to put on a play of their own, and decide to come to Goodridge with it, they will be assured a welcome.

The play will be given at Mavie Saturday evening, also a dance after the play, for which good music will be furnished.

Want 40 Men a Day.

The United States Navy wants 40 MEN a day from Minnesota. They are necessary to send the fleet to sea Only half that number are enlisting The Nation has called upon Minnesota for help. YOUNG MAN, will you be one of 40 to answer the call today? One MAN today may be worth two tomorrow.

Ordinance No. 9.

An Ordinance relating to dog licenses in the Village of Goodridge, Minn.

The Village council of the Village of Goodridge, Minnesota do ordain as follows:

SECTION I.

That every person owning, keeping harboring any dog before allowing or suffering such dog to run at large within the corporate limits of the Village of Goodridge shall annually on or before the first day of June cause such dog to be registered, numbered and described in the office of the Village recorder of said Village who shall thereupon issue to such person license, licensing and authorizing such person to keep such dog and every such person so licensed shall pay for such license one Dollar for every male dog and two Dollars for every female dog named in such license.

SECTION II

It shall be the duty of the village recorder to keep a correct list of all dogs registered, numbered and described as provided in section one of this ordinance with their number and description.

SECTION 3.

The recorder shall annually within one week after the first of July deliver to the Village Marshall or Village Constable a correct list of the dogs registered or whose owner or keeper have been licensed to keep same for the current year, and shall from time to time furnish to such Marshall or Constable lists of such dogs as are subsequently registered.

SECTION 4.

Nothing in this ordinance contained shall be so construed as autoorizing the Village Marshall or his deputies to kill ang dog temporarily within the Village of Goodridge with its owner or keeper and which is not owned, kept or harbored therein.

SECTION 5.

It shall be the duty of the Village Marshall or his deputies immediately on receiving from the recorder such list of all dogs registered, numbered and described as aforesaid to kill and bury or cause to be killed and buried all dogs found at large in said Village, contrary to provisions of this ordinance. The owner or keeper of any dog who allows or suffers such dog to run at large without having complied with the provisions of this ordinance on conviction thereof shall be punished by a fine of not less than five Dollars ($5.00) and not more than twenty Dollars ($20.00) one half to go to the complainant. In default of payment of such fine and cost of persecution said owner and keeper shall be committed to the Village or County jail until such fines are paid or until he is discharged by the President of said Village.

This ordinance shall take effect and be in force from and after its passage.

Passed by the Village council of the Village of Goodridge, Minnesota, this 16th day of April 1917
H. A. Halvorson,
Village President.
Carl Christianson,
Village Recorder.

GRADUAL CHANGE IN FEEDING

When Turning Cows on Fresh Pasture Grain Supply Should Be Continued for Short Period.

The practical dairyman has learned that any radical change in the winter feed of his cows should be made gradually if the milk flow is not to suffer. He is most likely to overlook the effects of turning his cows out to the fresh spring pastures.

Experiments which the Missouri college of agriculture has conducted have shown that a sudden change to pasture in the spring is likely to cause the cows to be underfed for several days. These fresh pastures are succulent, their water content is very high, and the cows are not accustomed to depend on their own activity for the food necessary for their milk. One of the results of this underfeeding, which is practically likely to occur with heavy or moderately heavy producers, will be a drop in the milk flow. It is difficult to raise this flow after it has once dropped, especially if it has been some time since the animals have freshened.

This underfeeding will also affect the composition of the butterfat.

It is important that all changes of feed of dairy cows, including the change to fresh pasture should be made gradually, and good milk-producing animals should be fed some grain in addition to the pasture. This will prevent the possibility of underfeeding. The grain feeding should be continued at least until the pastures become mature and the cows become accustomed to graze for their food.

Fail To Grant Bridge Request.

The matter of providing bridges across the Red Lake river in Pennington county was one of the interesting matters coming before the meeting of the board of commissioners Tuesday and Wednesday. Petitions signed by farmers residing along the stream were presented, praying that Bridges be provided at Kratka, Highlanding and Neptune. A number of citizens appeared to urge favorable action on the petitions, but the matter was laid over until a future meeting.

The Commissioners freely admitted that bridges at the points indicated were necessary and also that they were willing to provide them, but that the condition of the road and bridge fund of the county at this time made this impossible. It was suggested that the outlay be met by a bond issue, but the impression seemed to prevail among the officials that such proposition would stand slight show of being carried.

It was explainee that the county was a little hard pressed at present and would have to wait for the next tax settlement before making any extended improvements. The last term of court proved more costly than was expected and this made a hole in the visible supply of cash. Salaries had also been raised in some instances, this accounting for an extra outlay of $2,100 which was not taken into account when the revenue fund was provided for. Besides this there is about $2,100 tied up in wolf bounties still due from the state Under these conditions, it was explained, it would be impossible at this time to undertake the building of any bridges.—T. R. F. Times.

Hamre News.

The sale at Hanson's, Thursday was well attended.

Mrs. Oluf Sletten and sons Orin and Myran spent Friday with her parents, Mr. and Mrs. Thronson.

Mrs. Halvor Byklom accompanied Johnny Morken to Goodridge Saturday, she was called to Grand Forks, N. D. her father being very ill.

Glen Fish returned from Grygla last week, where he's been under the Doctor's care for some time, he will undergo an operation later on.

Mrs. Thompson called on the Thronson family, Friday.

Henry Morken and Loula Lovaas autoed to Goodridge last Wednesday.

(Too late for last week).

We surely have nice Spring weather The snow is nearly all gone in this part of the country, but plenty of water.

The Ladies Aid met with Mrs. Thompson, Thursday, April 5th. Their next meeting will be at Thor Thronson's, May 3rd.

Thorne and Tilie Byklome and Ruth Hawkins spent Sunday with the Lavaas girls.

Emil Brekke left last week for Halstad, Minn. where he will be working during the summer.

O. H. Thompson and T. Thronson made a trip to Oluf Sletten's, Saturday each brought back a load of hay.

Ray Paskewitz was out in this neighborhood last Thursday.

Ole Knutson called at the Homme home, Saturday.

Henry Morken has been out with his car already.

Thorn. Byklome left last Monday for Thompson, N. Dak., where he will be working for some time.

Oliver Howland called at the Thronson home, Saturday.

T. Thronson and daughter Alvilda, O. Brekke and Mr. Symingson were Grygla shoppers, Monday.

EVERGREEN TREES IN FAVOR

Useful, Both for Shelter Purposes and Landscape Effect—Spruces Best for Farmstead.

(By LE ROY CADY, Horticulturist, University Farm, St. Paul, Minn.)

The average farmstead can well afford a good planting of evergreen trees, both for shelter purposes and for landscape effect. Large or small trees may be planted and if properly cultivated and cared for soon make good shelter. The spruces are perhaps best for general planting. By using several kinds variety of color may be had, although often the best effect is secured by a solid planting. If these are all rather thick when small they may be thinned for planting in other places or for Christmas trees to advantage.

Every voting member is urged to be present as this will be very important for the future. The ladies of the above named congregations will serve [illegible]

Home Talent Play A Big Success.

The home talent play, entitled "Kinding the Hearth Fire", which was given by the members of the Goodridge Literary Society, in the school house was a big success from every standpoint. The school room was fairly well filled with people anxiously waiting for the curtain to rise. The play was a good one from start to finish and brought out very forceably the beauty of farm life and the evils young people from the country have to meet when they go to the city to work. Those who took part in the play are to be commended for the very efficient manner in which they handled their parts. Prof. A. O. Halverson deserves credit also, for the able manner in which he coached the members of the play. The numbers between acts were very good and was enjoyed by all present. A neat little sum of money was realized, which will go to the piano fund of the local school.

On Saturday evening, the members of the play, accompanied by about seven auto loads, journeyed to Grygla, where the play was staged before a full house. The audience was interested as soon as the first act commenced, and remained so during the play, for at any time during the performance, you could have heard a pin drop. After the play was over a social dance was indulged in by nearly all present and was very much enjoyed by all, excellent music being furnished by the Grygla orchestra.

Much praise is due to the people of Grygla for the courteous treatment given us. for the articles loaned us for use in the play and for their liberal patronage. Should they ever decide to put on a play of their own, and decide to come to Goodridge with it, they will be assured a welcome.

The play will be given at Mavie Saturday evening, also a dance after the play, for which good music will be furnished.

Want 40 Men a Day.

The United States Navy wants 40 MEN a day from Minnesota. They are necessary to send the fleet to sea Only half that number are enlisting The Nation has called upon Minnesota for help. YOUNG MAN, will you be one of 40 to answer the call today? One MAN today may be werth two tomorrow.

THE NAVY NEEDS MEN!

It Needs Them Now—To-day

Warships are waiting for MEN to run them. The Nation is waiting for MEN to defend its honor. Minnesota is waiting for MEN to fill its Navy quota.

Apply to the Navy Recruiting Station at No. 304 Marquette Ave., Minneapolis or in the following towns: St. Paul, Minn., Duluth, Minn., St. Cloud, Minn., Brainard, Minn., Fargo, N. Dak., Grand Forks, N. Dak., Minot, N. Dak.

Short Stories	Guy Rouze
Debate	[illegible]

Ordinance No. 9.

An Ordinance relating to dog licenses in the Village of Goodridge, Minn.

The Village council of the Village of Goodridge, Minnesota do ordain as follows:

SECTION I.

That every person owning, keeping or harboring any dog before allowing or suffering such dog to run at large within the corporate limits of the Village of Goodridge shall annually on or before the first day of June cause such dog to be registered, numbered and described in the office of the Village recorder of said Village who shall thereupon issue to such person a license, licensing and authorizing such person to keep such dog, and every such person so licensed shall pay for such license one Dollar for every male dog and two Dollars for every female dog named in such license.

SECTION II

It shall be the duty of the village recorder to keep a correct list of all dogs registered, numbered and described as provided in section one of this ordinance with their number and description.

SECTION 3.

The recorder shall annually within one week after the first of July deliver to the Village Marshall or Village Constable a correct list of the dogs registered or whose owner or keeper have been licensed to keep same for the current year, and shall from time to time furnish to such Marshall or Constable lists of such dogs as are subsequently registered.

SECTION 4.

Nothing in this ordinance contained shall be so construed as autorizing the Village Marshall or his deputies to kill any dog temporarily within the Village of Goodridge with its owner or keeper and which is not owned, kept or harbored therein.

SECTION 5.

It shall be the duty of the Village Marshall or his deputies immediately on receiving from the recorder such list of all dogs registered, numbered and described as aforesaid to kill and bury or cause to be killed and buried, all dogs found at large in said Village, contrary to provisions of this ordinance. The owner or keeper of any dog who allows or suffers such dog to run at large without having complied with the provisions of this ordinance on conviction thereof shall be punished by a fine of not less than five Dollars ($5.00) and not more than twenty Dollars ($20.00). one half to go to the complainant. In default of payment of such fine and cost of persecution said owner and keeper shall be committed to the Village or County jail until such fines are paid or until he is discharged by the President of said Village.

This ordinance shall take effect and be in force from and after its passage.

Passed by the Village council of the Village of Goodridge, Minnesota, this 16th day of April 1917

H. A. Halvorson,
Village President.

Carl Christianson,
Village Recorder.

GRADUAL CHANGE IN FEEDING

When Turning Cows on Fresh Pasture Grain Supply Should Be Continued for Short Period.

The practical dairyman has learned that any radical change in the winter feed of his cows should be made gradually if the milk flow is not to suffer. He is most likely to overlook the effects of turning his cows out to the fresh spring pastures.

Experiments which the Missouri college of agriculture has conducted have shown that a sudden change to pasture in the spring is likely to cause the cows to be underfed for several days. These fresh pastures are succulent, their water content is very high, and the cows are not accustomed to depend on their own activity for the food necessary for their milk. One of the results of this underfeeding, which is practically likely to occur with heavy or moderately heavy producers, will be a drop in the milk flow. It is difficult to raise this flow after it has once dropped, especially if it has been some time since the animals have freshened.

This underfeeding will also affect the composition of the butterfat.

It is important that all changes of feed of dairy cows, including the change to fresh pasture should be made gradually, and good milk-producing animals should be fed some grain in addition to the pasture. This will prevent the possibility of underfeeding. The grain feeding should be continued [illegible]

It was explainee that the county was a little hard pressed at present and would have to wait for the next tax settlement before making any extended improvements. The last term of court proved more costly than was expected and this made a hole in the visible supply of cash. Salaries had also been raised in some instances, this accounting for an extra outlay of $2,100 which was not taken into account when the revenue fund was provided for. Besides this there is about $2,100 tied up in wolf bounties still due from the state Under these conditions, it was explained, it would be impossible at this time to undertake the building of any bridges.—T. R. F. Times.

Hamre News.

The sale at Hanson's, Thursday was well attended.

Mrs. Olaf Sletten and sons Orin and Myran spent Friday with her parents, Mr. and Mrs. Thronson.

Mrs. Halvor Byklom accompanied Johnny Morken to Goodridge Saturday. She was called to Grand Forks, N. D. her father being very ill.

Glen Fish returned from Grygla last week, where he's been under the Doctor's care for some time, he will undergo an operation later on.

Mrs. Thompson called on the Thronson family, Friday.

Henry Morken and Loula Lovaas autoed to Goodridge last Wednesday.

(Too late for last week).

We surely have nice Spring weather The snow is nearly all gone in this part of the country, but plenty of water.

The Ladies Aid met with Mrs. Thompson, Thursday, April 5th. Their next meeting will be at Thor. Thronson's, May 3rd.

Thore and Tillie Byklome and Ruth Hawkins spent Sunday with the Lavaas girls.

Emil Brekke left last week for Halstad, Minn. where he will be working during the summer.

C. H. Thompson and T. Thronson made a trip to Olaf Sletten's, Saturday each brought back a load of hay.

Ray Paskewitz, was out in this neighborhood last Thursday.

Ole Knutson called at the Homme home, Saturday.

Henry Morken has been out with his car already.

John Byklome, left last Monday for Thompson, N. Dak., where he will be working for some time.

Oliver Howland called at the Thronson home, Saturday.

T. Thronson and daughter Alvilda, O. Brekke and Mr. Sviningson were Grygla shoppers, Monday.

EVERGREEN TREES IN FAVOR

Useful, Both for Shelter Purposes and Landscape Effect—Spruces Best for Farmstead.

(By LE ROY CADY, Horticulturist, University Farm, St. Paul, Minn.)

The average farmstead can well afford a good planting of evergreen trees, both for shelter purposes and for landscape effect. Large or small trees may be planted and if properly cultivated and cared for soon make good shelter. The spruces are perhaps best for general planting. By using several kinds variety of color may be had, although often the best effect is secured by a solid planting. If these are set rather thick when small they may be thinned for planting in other places [illegible]

INTENTIONAL DUPLICATE EXPOSURE

TOUT A VOUS

By CONSTANCE SEARLE.

With elbows resting upon the chest of drawers, face between her two hands, Charity Winthrop looked herself straight in the eyes; that is, she looked as straight as circumstances permitted, for the little old-fashioned looking-glass at its best was not very good, was more or less crinkled and mildewed on its silvered side.

It was just one of the little crosses she had to bear, this glass into which she had looked all of her girlhood. She had seen herself in other mirrors and knew that her eyes were bright and that her skin was satiny, with a tinge of color that was the envy of the summer boarders who frequented the point of land that stuck its nose into the Atlantic ocean down Cape Cod way.

This day, Valentine's day, she was angrier than she had ever been in her life before. Patience Cotton had shown her a valentine that had been slipped under her door early that morning. It was a home-made affair, two cut-out hearts with a bunch of dried forget-me-nots tied together with a bit of blue ribbon.

In one corner was a faintly traced monogram entwined with the outlines of a rudely-drawn heart.

It was this monogram that had flared to white heat the anger smoldering in Charity's breast. J. F. could only mean Josiah Foote and he had left her a few nights before with a look in his eyes that had turned her world upside down.

She agreed that it had come from Josiah. And of course she was glad he cared so much for Patience. But a little later she mounted the steep stairs to her room with lagging feet, walked slowly across the room to the chest of drawers, and with face between her two hands looked herself straight in the eyes.

Her mother's voice brought her to herself and recalled to her mind that Josiah Foote had told her he was coming over that evening to bring her something he had bought in Boston when he was there the week before.

To her surprise, Charity found him in the hall taking off his hat and coat.

"Guess I might as well give it to you here," he said nervously. "Your mother's in the sitting room and I mayn't have another chance." He handed her an envelope, his face flushing as he did so.

With a hairpin she carefully slit the envelope and drew from it a wonderful confection of paper lace, cupids and hearts with a dear little house half hidden by a lattice covered with roses. Tied to the top with a clumsy bow of blue ribbon was a ring set in turquoise to represent a cluster of forget-me-nots.

"Oh!" she cried, "for me? How did you know I wanted one? How could you know?"

He came a step nearer to her. "I didn't. But it looked so like you when I saw it in the window in Boston that I had to go in and buy it. Patience Cotton happened to come along and thought, as I did, that it was real pretty."

The name brought her back to earth.

"Patience!" she repeated the name slowly, but looking at him. "She was here this morning and told me you had bought a ring for her and were going to bring it to her tonight—that you had left it in Boston to have a date, and your initials and hers, engraved in it. I had forgotten." Then she flared around upon him, eyes blazing, color deepening. "How dare you bring this to me? How dare you?"

He looked at her in amazement, then swift anger took possession of him.

"There is nothing I do not dare," he retorted, catching her wrist in his hand as she flung past him. "Nothing—do you understand? But I will know what you mean. What's all this fuss about? Are you going to tell me?"

"No."

He changed his tactics. "Look at me, Charity." As she did not lift her head he put his disengaged hand under her chin and lifted her face. There was a little quiver of the lips and to her everlasting shame the tears that had filled her eyes rolled down her cheeks.

"Let me go, Jo. Let me go."

"Not until you have told me. You see, Charity, I care so much that I don't intend to let foolishness, or anything Patience Cotton may say, come between us; that is," he said diffidently, "if you have the least thought of me. I bought the ring for you, not for her. If you will look inside you will see the letters 'J. F. to C. W.' and some French words.

"I told the jeweler that I wanted something else besides the initials, and he said 'tout a vous' was just the thing."

For a moment he struggled with his New England reticence before he could speak the unaccustomed words with their note of tenderness. "They mean wholly yours. Do you feel that way toward me, Charity?"

"Now and always, Jo."

He leaned toward her, but a movement in the sitting room brought him suddenly erect.

"Well, now that that is settled I will go and have it out with Patience. I'll be back in an hour. And Charity—"

"Yes?"

"Light the parlor fire so that we can have a room to ourselves. You know I haven't—" but Charity had suddenly disappeared and getting into his great coat, Jo took himself out of the house.

(Copyright, 1917, by the McClure Newspaper Syndicate.)

[illegible]

The words had been pronounced which made the blushing debutante the wife of a young man of the type described by a blackfaced comedian as having all of his future behind him. The couple departed to make their home in a distant city.

"Now, don't forget to mention the bride's going-away dress," said the proud mother to a society reporter.

"I won't. Leave that to me."

"Yes, don't forget to mention her going-away dress," said the bride's dubious father, "for the Lord only knows what she'll come back in."

Had Quite Enough.

His offer of marriage had been declined without thanks.

"And," he said, "am I to have no assurance whatever?"

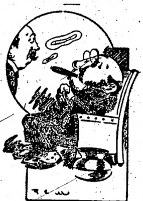
"Not from me," replied the unfair one.

"May I ask why not?" he queried.

"It isn't necessary," she replied, "because you have more assurance now than would suffice for a dozen men."

And seeing the case was hopeless, he proceeded to fade away.

NEEDED THE MONEY



The Bachelor—Are these jokes true about a woman's pocket being so hard to find?

The Benedict (whose wife has money)—Sure thing. I spent an hour last night trying to find my wife's pocket. Can you lend me a ten-spot, old man?

Work To Do.

Thrice welcome to the genial sun,
Whose face has long been hid.
Perhaps he'll dry the slipp'ry streets,
So auto cars won't skid.

Wanted to Know.

"I'll be down in a minute," called Mrs. Dubwaite from her dressing room.

"Just a moment, dear," answered Mr. Dubwaite.

"Well?"

"Do you mean the minute that is now being ticked off by the clocks and watches, or a minute that will begin about three-quarters of an hour from now?"

Hopeless Case.

"Are the Gadder girls still doing settlement work?"

"They dropped that long ago."

"They were not discouraged, I hope?"

"Very much so. They tried to interest a family of poor Italians in photography, and when Tony told them he would rather have a bushel of potatoes, they gave it up in disgust."

Point of View.

Meeker—This paper says a man should tell his wife daily that he loves her. What do you think of that?

Enpeck—Huh! I don't think a newspaper ought to encourage lying.

Unnecessary.

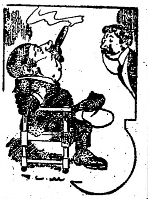
Hazel—So you were at the Smythe-Jones wedding, were you?

Aimee—Yes.

Hazel—Who gave the bride away?

Aimee—No one. She married for money.

FROM HIS PA'S SIDE



"She doesn't know where the baby gets its bad temper.

"That's strange. Most young mothers can place that sort of responsibility in a jiffy."

Really Worth While.

The wireless telegraph is fine,
Let all the poets harp it;
But wouldn't it be just divine
To have a beatless carpet?

His Only Chance.

"A man can't help his personal appearance," said the moralizer. "He isn't permitted to select his eyes or his hair."

"No," replied the demoralizer, "but in after years he can go to a dentist and pick his own teeth."

DAIRY STABLE HINTS

Timely Suggestions From Wisconsin Experiment Station.

Raise Well Heifer Calves From Cows Which Have Made Large and Profitable Production—Have a Babcock Milk Tester.

(Wisconsin Experiment Station.)

Use purebred dairy sires from cows having large and profitable productions of milk and butterfat.

Raise well the heifer calves from cows which for one or more generations have made large and profitable productions of milk and butterfat.

Breed heifers at the age of sixteen to twenty months.

Feed heifers liberally and milk regularly.

In Winter Time.

Feed cows daily one pound of grain for every three pounds of milk produced, twenty-five to forty pounds of corn silage, and what clover or alfalfa hay they will eat.

Do not turn cows out to remain and suffer in cold, stormy weather.

Allow them to have water which is not colder than that from a deep well, twice or three times daily.

Brush cows if you can possibly find the time, for it pays better than does grooming of horses, which as a rule is not neglected.

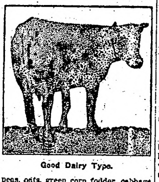
Keep cows in clean, well-lighted, properly ventilated stables.

In Summer Time.

Do not try to save feed by turning to pasture too early.

Provide plenty of pure, fresh water, shade, and protection against flies during hot weather.

Supplement poor pastures with corn silage or green soiling crops like rye,



Good Dairy Type.

peas, oats, green corn fodder, cabbage and other available feed.

At All Times.

Treat cows gently and avoid excitement.

Weigh the milk of each cow at milking time.

Get your neighbors to share with you in owning a Babcock milk tester and test the milk of each individual cow.

Discard the cow which has failed at the end of the year to pay market price for all the feed she has consumed.

Give cows six to eight weeks' rest between lactation periods.

Belong to a dairy cattle breeders' association, a cow testing association and every organization that will help to keep you posted and in touch with managing your dairy herd.

CULTIVATE TO AID ALFALFA

It Will Pay Farmer to Go Over Alfalfa Field With Disk After Cutting First Crop.

It will pay you to cultivate the ground as soon as you get the first crop of alfalfa hay off of the ground, especially if it is an old stand of alfalfa. The crop has shaded the soil. When you cut it, you let the hot sun strike the earth and it bakes it hard. If you will break that crust, you will add much to the crop. It takes nerve, but it pays to right your disk and set it so it will throw some dirt, and go over the alfalfa both ways, and then harrow it. If you set your disk too square you will destroy some of the crowns. Learn just how to set the disk by experience. It will do your alfalfa as much good as cultivation helps the corn. Try it once and be convinced.

STARVING TREES IN ORCHARDS

Neglect Means Greater Loss Than to Any Other Crop—Food and Care Are Most Essential.

Has the orchard played out? Has it begun to weaken and give way to the ravages of insect and fungus pests? Has it ceased to produce profitable yields of good sized fruit? If so, the chances are that you are starving the trees. Fruit trees need food and care the same as other plants. Neglect means the same loss—no, it means greater loss than to any other crop. If you starve a corn or oat crop, it can be remedied at any time in one year. They are annuals. But when you starve the orchard and weaken it till it is killed by its enemies, it takes years to grow another, however rich you may make the orchard soil.

REPAIRING ALL OLD HARNESS

Take Advantage of Idle Days to Rivet on Straps and Supply Buckles Wherever Needed.

There will be some idle days when it will be possible to mend up all old harnesses. Rivet on straps and supply buckles and snaps where needed. Pieces from cast-away harnesses will come in handy in the mending job.

FATIGUE OF WAR FELT IN GERMANY

Wage-Earning Class Becomes Sullen and Almost Rebellious, Says Consul.

WANT PEACE AT ANY PRICE

Russian Revolution Finds Echoes in Riots in German Industrial Centers—Standard of Living Lowered Fearfully.

New York.—Rumors from various sources that the Russian revolution has found echoes in riots in German industrial centers had an interesting sidelight here when A. Curtis Roth, American vice consul at Plauen, Saxony, described the awful conditions existing among the working classes of the central powers. Mr. Roth has just spent seven years in the Saxon industrial district. He said:

"Wage-earning Germany's nerves have been worn raw by the increasing weight of suffering that the war has brought it. This class of Germans has become sullen, dissatisfied with the government, almost rebellious. While the middle class remains intensely patriotic, parading before the casual observer a unified and determined Germany, fatigue of war is making alarming strides among the working people. A great many of these humble people want peace at any price—at the price of their colonies, of Alsace-Lorraine, even of their country's prestige and position.

"The working people, at least, in Saxony, are becoming restive. They have hungered and grieved and overworked for many months, with conditions steadily growing worse and with each promise of peace fading into an indefinite prospect of endurance. All foods but the very coarsest are beyond their means. The ration of these coarse foods is insufficient. The poor have been subsisting throughout the last year upon bread, potatoes, turnips and salt.

Second Peasants' War Possible.

"Pushed much further by the galling stress of starvation, overwork and loss of dear ones, a second peasants' war may well be added to the miseries of central Europe.

"The standard of living among the working people has been lowered fearfully. It is now on a par with the coolie standard of overcrowded Asia. Their work has increased; their share in comforts has diminished, and their amusements have entirely fallen away. The urban poor have become desperately poor, and they are beginning to realize that each added month of the war means that their plight must become more and more hopeless.

"In the beginning all was wild enthusiasm for the war. The people crowded around the railway stations to see the troop trains hurling past every 25 minutes. Then came the floods of wounded, the difficult readjustments made necessary by the absence of the wage earners, and then the numbing pinch of hunger. Worst of all was the atmosphere that settled down upon the land, an atmosphere of want, of fear, of suffering, of black depression, which seemed to seep through and through one and chill the consciousness.

"An eternal New England Sunday gripped the formerly bustling manufacturing towns in my district. The streets were bare of traffic. People passed about their errands silently. There was no laughing, whistling, loud talking or jovial greeting. The business streets were dotted everywhere by stores closed up by war. Grass grew between the cobbles in the roadway. Now and again oxen dragging primitive carts of farm produce lumbered through the streets. Restaurants and cafes were deserted. It cost money to frequent them, and, moreover, they had nothing to sell.

Sufferers on Every Hand.

"It is hard to describe life under these conditions. The best I can do is to say that it was suffocating. When not going to and fro about their work, the less well-to-do hid their unhappiness in their rooms. As it was, one was forever meeting on the street hollow-cheeked, emaciated, dry-eyed sufferers. I felt as though I had escaped from a dark prison when I got back to this country and saw happy, healthy, well-fed people again.

"The strain is beginning to tell. I have heard the emperor soundly berated by his famished subjects in the shops that the poor frequent. I have often during the last months of my stay listened to strangely seditious talk among the workers, men and women, which grew in violence after the check at Verdun. The working women have threatened a number of times to get out of hand and rough things. In Saxony, at least, war is successfully throttling, one by one, all the people's impulses for living.

"The Saxon casualty list has been very heavy. The Plauen regiment has been wiped out six times. All the young, dashing, professional officers who led the first onslaught have been wiped out. The troops are now officered by men of all classes, who have made good in the field, and in some cases that I know of the derivation of the officer testifies to the startling democratizing effects of war. The call for more men is always insistent. The high school boys go out once a week

MAIL ORDER EVIL; MAGAZINE MOVES TO REMEDY IT

Former Professor of University of Wisconsin Outlines Extraordinary Growth of Industry Which Must Be Curbed.

The fight between the retail selling of goods by local merchants and retail selling centralized in the hands of a few powerful corporations is an old one. But until now there has been no practical co-operation between the magazines and the million or more retail merchants of the country. The recent decision of the Delineator, the Designer and the Woman's Magazine to exclude all mail order advertising from their columns is important in that it brings to the thousands of scattered communities now conducting the fight a unifying force of nation wide scope and influence. If it can achieve recognition and co-operation at the hands of retail merchants it is perfectly evident they in turn will profit substantially under the new national leadership.

Paul H. Nystrom, former professor of political economy in the universities of Wisconsin and Minnesota, speaking of the growth of the mail order industry, which has grown to be a menace to local merchants, says:

"One chief cause of the recent rapid progress of the mail order business is the tremendous increase in circulation of popular periodical literature loaded with advertising, particularly the national women's magazines. Both reading matter and advertising have shown the way to greater variety in consumption."

The magazines which have changed their policy so as to exclude all mail order advertising have a circulation of over 1,500,000 a month among the better class of families in the United States. This in itself removes the menace of mail order competition from the reading matter of about one out of every five merchandise buying families in each community. Undoubtedly this will be a powerful if not the determining factor in the success of many a "buy at home" movement in territory that is now debatable.

THE WAIL OF A MALE WHO BOUGHT BY MAIL

Ma was reading out loud from her magazine,
When she says to me, "The best I've seen
For all the things that must be had
Is this here low price mail house ad.

"Here's Cross Grained Oats, 9 cents—no more—
'Gainst 10 they're charging at the store.
And if all the rest that's advertised
Is just as cheap I'd not be s'prised
That we'd save money in the end
By trading with our low price friend."

So I shot an order into the mail—
It carried my name, it carried my kale.
I ordered a lamp and a rocking chair,
A pail of prunes and some underwear.
My wife, she ordered two petticoats,
A new false puff and some Cross Grained oats;
A Noah's Ark for baby's toy,
A pair of boots for Bub, the boy;
Stockings for Nell, a waist for Lizzie—
Just writing that order kept me busy.

Well, we shot the order into the mail—
'Twas all of a thirty dollar sale;
We figured out three days was enough
To fetch us that dodblasted stuff.
They got my coin, but not a peep
Did I hear from the firm of Grab & Keep.
'Twas all of two weeks—maybe three—
Before them goods arrived for me.
I got a notice, hitched the ma'ar
And drove three miles to the railroad car.
I found a whacking big box there—
Some smashed up, but I didn't care.
(When you've hoped for prunes until it hurts
And your back is cold for lack of shirts,
When the goods in front of you 's labeled "Must,"
You grab 'em—if the box is bust!)

So I heaved the wreckage into the cart
And headed for home, feeling pretty smart.
My goods had come from a town that's real,
And I'd saved four dollars on the deal!

We soon got home and opened the case
And looked at our purchases, face to face
Well, sir, 'twas an eye opener, you can bet,
And one that I shan't soon forget!
The parcel of oats was torn to rags—
But we'd saved twelve cents on a dozen bags!
The prunes seemed good, and the baby's toy—
Before it broke he had one day's joy!
My wife's false puffs was some horsehair stuff,
And her petticoats wa'n't half large enough
The stockings for Nell looked thin and frail,
The waist was ruined by a rusty nail
The lamp was as lurid as a three weeks boil
And held 'bout a teacup full of oil
The boots for Bub cost the same, no more,
Than Hoskins asks at the village store
But the rocking chair, "built of solid oak,"
Was the funniest part of this wholesale joke
Oh, 'twas just like the picture, rod and rung
But the size of the thing's where we got stung
Ma tried it and found 'twas a false alarm—
'Twas a foot too narrow from arm to arm!
Nell had more luck, she wedged right in—
But we pried her out with the rolling pin!

Then I set right down and figured the sale
That "ad" had made through the U. S. mail.
I figgered an hour, and then some more,
And found we had nothing on the village store!
I'd sent thirty dollars to Chicago, Ill.,
And saved twelve cents on the total bill!
Then I seen at once 'twas them nine cent oats
Had taken our dollars and made us goats!
So I swore by all that was holy and pure
I'd read no ads with a low price lure.
I stopped ma's magazine on the spot.
Will I take it again? I reckon not;
Leastwise not till they put a ban
On that "come-on" stuff of the mail house man!

SYNOPSIS.

CHAPTER I—Bertram Meade is consulting engineer, representing his father, the great Meade, who is the designer of the International bridge, the greatest cantilever structure the world has ever heard of. In the shadow of the uncompleted bridge young Meade receives Colonel Illingworth, president of the Martlet Bridge company, the constructors, and the colonel's daughter, Helen, whom he loves.

CHAPTER II—At dinner the possible weakness of the compression members of the bridge is talked of and Meade defends his father's calculations.

CHAPTER III—Meade and Helen go out upon the bridge in the moonlight and Helen narrowly escapes a fall to the river below. Meade tells his love and they go to the colonel, who approves their marriage when the bridge is finished.

CHAPTER IV—Abbott, the construction engineer, tells Meade there is a deflection in member C-10-R, but makes light of it. Meade, after vainly trying to stop the work, wires his father and follows the telegram to New York.

CHAPTER V—At the great engineer's office father and son try to prevent disaster, but young Meade only reaches Colonel Illingworth as a message comes that the bridge, with 150 men, is in the river.

CHAPTER VI—Abbott goes on with the work, ignoring Meade's protests, but while uneasily inspecting C-10-R the lacings snap under his eyes and he goes into eternity with the other men on the falling bridge.

CHAPTER VII—Young Meade has pointed out to his father the possible weakness, but his objections have been overruled. His father now prepares a statement showing his own fault and sends his secretary, Shurtliff, to the Gazette with it.

CHAPTER VIII—Young Meade, on his return, meets Rodney, an old college friend, and other reporters at the door of his father's office. He finds his father dead from heart failure. He assumes entire responsibility for the catastrophe. Shurtliff, who has not obeyed orders, but concealed the papers the dead man had given him to make public, also accuses the younger Meade.

CHAPTER IX—In her father's presence and over her protest Meade breaks his engagement with Helen.

CHAPTER X—Out West, at a big irrigation dam under construction, Meade begins life over again as a rodman under an assumed name.

CHAPTER XI—Meade has gone to the ranch of Winters, a college friend, and there takes stock of himself and the terrible responsibility he has assumed to save his father's name from dishonor. He makes the new start as an unknown.

CHAPTER XII—Helen and Rodney conspire to save Meade from his own false confession in spite of himself. Shurtliff has been employed by the colonel and Helen, thinking he knows the truth, sets out to win his confidence.

CHAPTER XIII—Meade gains the confidence of Vandeventer, his chief, though he refuses to tell his own story. He is promoted.

CHAPTER XIV—Unexpected rains threaten the dam before the spillway is in shape to carry off surplus water.

"You keep your own counsel, but if you ever want a friend, count on me; meanwhile, as a man of experience and ability, what would you do?"

"Get out the men and build up a temporary dam on the top of the roadway here, to turn the flow over to the east bank and make the spillway do more work."

"But the rain has stopped."

"And in all probability will stay stopped—still you never can tell. A few more hours of rain like that we've had and the whole thing would go. If the water were as high as the top there'd only be two feet of head in the uncompleted spillway, and that wouldn't be enough to discharge it at the rate it's been coming in."

"Of course," said Vandeventer thoughtfully. "And if the dam goes," he added, "there are ten miles of back water up there and millions of cubic yards impounded, which would sweep down the valley. There wouldn't be a thing left of the camp, the town, the new railroad bridge, or anything else."

"Coming on top of the International, the loss of this big and expensive viaduct would about finish the Martlet company," said Meade thoughtlessly.

Vandeventer looked at him sharply. An idea suddenly came to him. Meade had turned away his head as he realized his slip, so he did not observe the light in Vandeventer's eyes. However, the resident engineer was a good sort.

"You are right," he said quickly. "I hate to call out the men, but we've got a little chance, now the rain has stopped, and we can work to advantage in spite of all this awful mud"—he lifted his foot up and disclosed it caked and clogged with masses. "I'll take charge in the center here, and Stafford on the left, and I'm going to give you charge of the east end of the dam, over by the spillway. If only those drills had been here six weeks ago."

"We might set the men to work on that rock now," said Meade.

"It would be useless. There's too much of it. No, if we're going to save the dam, we've got to build it up and try to keep ahead of the waters if they rise any more. The higher we can build it the greater will be the head on the spillway, and the more will be discharged. I'll turn the men out at once."

"But what are you going to do?"

"I'm going to palisade the top of the dam. There's plenty of timber already cut down, and we will cut a lot of young pines and build a palisade wall of timber across the top three or four feet back from the edge. Well banked on the downstream side, it may hold."

"I might be worth while to line the palisade with galvanized iron sheets from the houses," said Meade.

"A good idea," said Vandeventer, "and we'll pile what underbrush and small stuff we have in front of the palisade and heap what rocks we can find on top of that, and we'll bank it up on the other side with earth. It's a poor dependence, but it will hold for a while anyway, and every moment of time may be precious."

"How about sandbags, sir?"

"We've got a few hundred cement bags, but not enough. I wish we had a few thousand; however, we will fill what we have, and if the water rises and begins to trickle over the top and through the palisade, we'll jam those down at the danger points. Can you suggest anything more?"

"Nothing."

"Good. We'll turn out the men. They've had six hours' sleep anyway."

CHAPTER XV.

The Battle.

It was now three o'clock in the morning. In about half an hour the men, naturally grumbling and protesting at being deprived of any of their sleep, were out and at work. Lanterns were lighted everywhere. The rain had fortunately not resumed, and the air was soon filled with noise and confusion. Men with axes were busy on the hillside cutting the young pines. Horses were hitched to the dump wagons, the steam shovel began tearing away the hillside. Some of the men were detailed to knock down some of the galvanized iron houses and the battering of the hammers on the metal added to the din.

Under Vandeventer's personal direction a row of stakes was driven into the top of the dam about three feet from the front of it. Big sheets of overlapping galvanized iron were nailed roughly to the fronts of the firmly bedded stakes and the small branches and brushwood were thrown down before it. Bowlders and big stones were carried out on the dam in the wagons and thrown down on the brushwood; spare timbers, broken wagon beds, old wheels, joists of dismembered houses were driven into the earth to serve as braces behind the palisade; a bank of earth was piled up behind it, on which every man who could be spared from other tasks, even the chiefs themselves, labored with breathless energy. The water was still rising, although the rain had stopped; the natural drainage would cause that, but the rise was slower.

At dawn Vandeventer personally carefully measured the depth of the water and gauged it again. It was a scant six and a half feet below the top of the dam. If the water rose above the top it was gravely questionable whether the palisade would hold it at all, yet there was no other way of increasing the depth of the spillway enough to discharge the flood volume.

Working as hard as they could, they had barely succeeded in raising the earth bank back of it a foot high. They kept at it unremittingly, although it did not seem to be of much use. Vandeventer, Stafford and Meade gathered together and scanned the sky, seeking to discern the signs of the time, the purpose of the heavens. It was clearer in the east. The clouds to the northwestward were in violent action apparently. Lightning flashed through them and over the great range itself; low, muttered peals of thunder came down from the peaks lost to sight in the blackness overhead. They observed all this carefully and Vandeventer turned away, shaking his head.

"I don't know," he began—the three of them were over on the east side the better to see up the valley—"it looks pretty bad, doesn't it?"

"It does," answered Meade, while Stafford nodded his head.

"And, by the way, Stafford, have you notified the town and the bridge people of the danger and bid them prepare for it?"

"I tried to telephone them a while ago, but the connection has been broken; the storm has played havoc with the line probably," answered the assistant engineer.

"Well, what did you do then?" asked Vandeventer a little impatiently.

"I sent a man down on horseback in a hurry to warn them that if it rains again the dam might go, and if it did it would go with a rush; that the water was now only six feet below the level, and that they had better get up on the hills. Of course, last night's rain must have made the road almost impassable, but he ought to get there by nine o'clock. I told him to tell the Martlet people to take whatever steps they could devise to hold their viaduct and their machinery," answered Stafford, as he turned and walked toward his own part of the dam.

"Good," exclaimed Vandeventer. "There's nothing left for us to do but keep on."

The resident engineer looked white and haggard. Although it was cold and raw in the wet air, he wiped the sweat from his forehead.

"The men are doing splendidly, sir," said Meade.

"Yes," said Vandeventer, "many of them have their wives and children back in the town. Some of the Italians have bought land on the prairie and are going to settle here. They're fighting for everything they've got on earth. What do you think of the chances of this palisade of ours?"

Meade shook his head.

"It's all we can do, sir, but if the water rises more than seven or eight feet—"

"Say it," said Vandeventer.

"The dam would go like a house of cards."

"Exactly. And look at that cloud-bank over there in the northwest. It's spreading."

"What wind there is," said Meade, moistening his finger and holding it up to feel the direction, "is blowing the opposite way down here, but you can't tell what is happening up there. Well, all we can do is to fight on."

And fight they did. It was almost at first sight like the hand of man against the hand of God. There was no more room for engineering expedient. It was chop and hew, break and pound, dig and drive, carry and pile. Throwing off his coat, Vandeventer seized a spade and began to work like any other laborer, and the rest of the higher men followed his example.

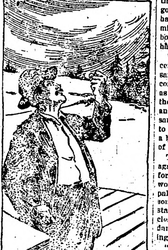
At six o'clock the blackness hanging in the northwest began to turn their way. It was coming down the mountain. It was headed for the valley. Vandeventer saw it, every teamster, every common laborer saw it. It was coming. Unless heaven itself interfered there would be more rain. They had worked desperately before, but now they applied themselves to their tasks with a kind of wild fury. A sort of insanity took possession of them. They would not be beaten. They cried, at first shrilly and then hoarsely and raucously, encouraging words and phrases from one to another; in words vivid, profane, desperate. They stood there and they heaved and dug and piled and hammered and hurled and drove fiercely. It was a battle madness that came into them. They saw red like the berserker of old. Yes, it was not unlike a battle in other ways, for with the rush of the northwest storm came roaring mighty thunder and vivid and terrifying lightning. It was as if great darts of light literally were hurled by some gigantic hand behind the black screen of sweeping cloud down upon the granite mountains. They saw splinters of fire where the thunderbolts struck. The pealing of thunder was appalling.

Their frail palisade backing was not half completed. It must be raining somewhere, for the water was still slowly rising. It was five and a half feet now from the crest. It was hopeless if another rain fell, and the rain was coming. There was an added chill in the still air of the valley as the storm drove down upon them. A few of the fainter hearts flung down pick and shovel and ax and stood craven. Oaths, curses, blows even, from those of the braver sort shamed them into work again. These brave hearts and true might be swept away with the dam if it gave way, but they would not give up, and no man working with them should flee his task or shirk his duty. By the living God, whose sport and plaything they seemed to be, they swore it; and so weak and strong, bold and timid labored on—desperate, resolved, godlike in their courage and persistence.

The clouds were moving swiftly now. To the east it had been clear, but now it was also black, and then with a roar greater even than a thousand thunderclaps, the wind tore down the mountains, through the narrow canyons, into the valleys, shrieking in the pines, and fell upon them and hurled them down and brushed them back. And after the wind, the rain. A drop or two struck Vandeventer's cheek; another, another, and then the flood. He lifted his head and stared and shook his fist at the sky and turned to the human termites he commanded.

"Carry on, carry on, boys," he cried, shrieking to be heard above the thunder peals, "we'll beat it yet."

A cheer rose about him and was caught up and ran along the top of the great dam. The half-maniacal yell was such a cry as men might give vent to in the heat of battle, the excitement of wild charge, and then they fell to it again. The more ignorant, unaware of the feebleness of the palisade, the more knowing indifferent to it, seeing only the job, alike realized only their duty to fight on, to answer the appeal to their manhood, to refuse to admit defeat even when life trembled in the balance.



—And Shook His Fist at the Sky.

Yes, to use the ancient simile again, the fountains of the great deep were broken open. What had befallen them before was nothing to this. The hard rain of the night seemed trifling compared to this avalanche of water. This was a cloudburst indeed. And to make it worse, to make their task harder, to render their efforts useless, the high wind roaring down the valley piled the water up and drove it in thunderous assaulting waves against the great mound of earth on which the men struggled and labored frantically. Vandeventer [illegible] he did not dare to throw it down, lest his action be misconstrued—went from gang to gang, from man to man, talking to them, appealing to them, pointing out weaknesses here and there, inspiring them, holding them up as a man might hold a stricken line against the onslaught of a victorious and overwhelming force. And against wind and rain in that thick darkness, blinded by the flashing lightning, stunned by the pealing thunder, with zeal superhuman they toiled on and on and on.

Back and forth went the chief, showing himself a leader of leaders, and wherever he stepped the fury and desperation of the effort to stem the tide increased. When he came plodding along the muddy roadway to the part committed to Meade he did not find the engineer.

"Where's Roberts?" he yelled above the noise of the storm.

"He and two men have gone, sir."

"Gone?" cried Vandeventer, cut to the heart at what he thought was a desertion. "Well," he shouted, realizing there was nothing he could do then and that he had neither breath nor time to waste, "there's more need for the rest of us to take their places."

He drew a man or two from the other gangs to re-enforce this danger point and himself directed their work.

Now it takes time for water to rise five feet, even in a cloudburst or a succession of them. The rain constantly seemed to increase as the wind drove it on. Vandeventer knew that the dam was doomed, that the sluice and the half-finished spillway combined could discharge only a small part of the flow, but he knew that he would have two hours at least to work before the water could pass the crest, undermine, and batter down the palisade and begin to trickle over. Just as soon as it did roll over the top, unless they could stop it, the whole thing was gone. For those two hours the supermen labored unremittingly in the downpour with a persistent and heroic courage that should have been recorded in song and story but which was not. It was remembered after a while by none save a few. To the many it was only "all in the day's work!"

The undersluice in the side of the dam which would later serve as headgate for the canal had been intended to pass the smaller floods which might occur during the construction and had been open since the rain began. It carried off a great volume of water, but hopelessly little in comparison with the flood. Foot by foot in the torrential downpour the water rose. At half after eight it reached the level of the spillway and commenced to rush through in ever-increasing volume, but the flow into the reservoir was far greater than the spillway's capacity.

Still the sight of the rushing water encouraged the men. Every one of them felt that if the palisade held the discharge would be increased enough to stop the rise, but at present the effect was small. By nine o'clock it was within a foot of the top. They began to measure its rise by inches. Although the dam had been carefully kept level as it was built, the trample of horses and men, the present digging and palisading and revetting had caused little depressions. Now the water rose to the level. Here and there it began to trickle over!

The rain coming down from the mountain tops was as cold as ice, yet the men were in a fever of excitement. They had got their second wind. They were too enthused, too desperate, to feel their weariness. They had not worked before as they did then. It was the last possible nervous outburst with most of them. They could keep it up a little longer—till they dropped dead. As the mad thoroughbred falls in his stride on the track, pushed beyond his power of endurance, as even the common carthorse can be made to go until he drops, so these men, white, haggard, nervous, drawn-faced, sweat mingling with the rain on their sodden bodies, would go till they broke. They had not quite reached that point yet.

There were some five hundred heavy cement bags which had been filled with sand and piled up on the roadway at convenient points. As a forlorn hope, as a last try, Vandeventer called all the diggers and ditchers, and hewers and drivers, and bade them tackle the sandbags. The timber wall that rose to four or five feet was now packed to a height of three with an unequal wall of earth.

The waves were beginning to roll against the rampart, although their force as yet was broken by the brushwood. Vandeventer jumped up on the palisade near the center. There were some large logs there where he could stand, and whence he could get as clear a view of the whole top of the dam as was possible through the driving rain.

"There," shouted the engineer, pointing to a red trickle—it seemed to him like blood, taking its hideous hue from the red clay of the banks—where the water had found a low spot and was washing across the top and trickling through the new wall and down on the other side. Even as he pointed, the trickle became a stream and the stream bade fair to be a flood. Men ran and dropped sandbags over in front of the palisade, right where the leak had occurred. Other men heaped up the earth behind the wall, seeking to smother it and stop it. The water checked there, they were forced to do the same thing at another place. Desperately they dropped their sandbags, sturdily they plied their shovels in the mud; scrambling and yelling, they ran from leak to leak. They lifted the heavy bags of sand as if they had been leaves of bread and jammed them down. They swung pick and shovel like toys, although the [illegible] all the earth sticky mud and the work all the harder. The water was clear over the top of the dam now, and streaming through the revetment of brush and surging against the palisade. Where it did not let the water through, the line of stakes was beginning to bend backward.

The men who had expended their sandbags and could get no more, in one final effort ran to the palisade, dug their heels madly in the wet, slimy earth and put their shoulders against the bending stakes as if to hold them up by main strength. Thin streams were flowing here and there, now unheeded. Checked and held in one spot, the water broke through at another. The spillway could not control the rise.

"She's gone, she's gone!" gasped Vandeventer under his breath. He had fought a good fight. He could do no more. There were no more bags of sand. Save for the men straining at the wall here and there and everywhere, there was left nothing but to stand and wait, having done all. As one man saw another the whole hundred and fifty caught the contagion and threw themselves against the palisade, wet and chilled from the rain but yet madly, recklessly, Americans and foreigners alike. They would hold it by main strength for another minute, they swore, oblivious to the fact that just as soon as it went it would go with a rush.

The stockade would be swept away first, and they would go with it. What of that? The men back of it matched their brawny arms against rain and wind, the powers of man against the powers of God, but not mockingly. It is perhaps doubtful if they realized what they did. It was instinct, habit, blind desperation now. If the flimsy wall failed under the terrific water pressure, they would be hurled beneath it, swept down the slope of the dam, buried in the débris as it was swept away, caught up if they by any chance survived so far, and hurled, broken and battered, down the valley in the terrible flood that would ensue. What did they know about that, or knowing, what did they care, as they strained at the wavering timber wall? And still they held as the rain poured down on them, soaking through their soggy clothes, the colder on their exhausted bodies for the keen wind that blew across them.

Well, they had done everything they could. Vandeventer jumped down and pressed himself against the nearest timber with the men and waited, silent. He had never sustained such a pressure in all his life. Like Atlas, he felt as if he were holding up a world. And the mocking thing about it all was his feeling, nay his realization, that he was not really holding anything, that if the palisades failed, his pressure, his resistance and that of all the other men amounted to nothing. Yet he held on, and they, too—demigods.

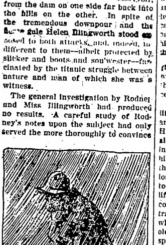
CHAPTER XVI.

The Ancient Art of Fascination.

And much of the last wild hurricane of work took place under the observation of a woman!

From the top of the big mesa there was a clear view of the new reservoir, from the dam on one side far back into the hills on the other. In spite of the tremendous downpour and the fierce gale Helen Illingworth stood exposed to both attacks, and, indeed, indifferent to them—albeit protected by slicker and boots and sou'wester—fascinated by the titanic struggle between nature and man of which she was a witness.

The general investigation by Rodney and Miss Illingworth had produced no results. A careful study of Rodney's notes upon the subject had only served the more thoroughly to convince them that Meade was blameless. But the most assiduous effort with the heartiest will in the world and the promptings of devotion and affection could not make a case out of these suggestions and their inferences that would hold water. They could not establish their contention beyond peradventure in the face of Meade's direct admission and Shurtliff's corroboration. They could not establish it in the public mind by any evidence at all if Meade and Shurtliff remained silent.



Helen Illingworth Stood Exposed to Both Attacks.

If either one or the other of the two conspirators could be brought to tell the truth, Meade could be restored, at least sufficiently so for the purpose of argument; the argument that Helen Illingworth sooner or later must make to her father. It was that to which she gave the most thought, it was for that she planned and longed.

Two people cannot resolve, even by mutual consent to dismiss from their daily thought and conversation any subject whatsoever without introducing in place of it a certain constraint. It is as futile to attempt to dismiss anything absolutely from the human mind as is the oft-suggested cure for rheumatism—doing certain things without thinking of the disease sought to be cured!

Colonel Illingworth had dismissed Meade from his mind because he hated him. Helen Illingworth refrained from talking about him to her father because she loved him. So they were never in each other's presence without thinking of the man. This was a source of great irritation to the father. On occasion he almost found himself at the point of shouting at his daughter to talk about him. And that she so carefully avoided the subject and as the avoidance was so obviously in accordance with his own wish, the restraint irritated him the more. The fact that they both sought so carefully to maintain the old relationship made it more impossible. For relationships which are primarily founded on love cannot be maintained by constraint without the weakening of the great force upon which their tenure had previously depended. There is nothing like concealment to impair and weaken a tie unless it be a ban! Prohibitions rarely prohibit.

Still there remained a deep and abiding affection between father and daughter and they managed somehow to get along outwardly much as before. Indeed Colonel Illingworth was more kind and considerate than ever to his daughter, and she repaid him with more than usual care and devotion. The very fact that she seemed to have accepted the situation and obeyed the law he had laid down gave him some compunctions of conscience. On that account, perhaps, he had been the more willing to accede to her request to take Shurtliff into his employ. In no way was Shurtliff responsible for the failure of the bridge or for any mistake in the calculations of the Meades, and Shurtliff was an invaluable man, not only for an engineer but for the president of the Martlet Bridge company.

He was familiar with the subjects that Colonel Illingworth discussed and wrote about. He was intelligent and reliable to the last degree, his reputation for steadiness and discretion unquestioned, and he was marvelously efficient in his subordinate position. The colonel, having first tried him out, had advanced him rapidly after learning his worth. He was now his private secretary. Shurtliff being an old bachelor without kith or kin, and not originally fond of women, found himself suddenly in touch with one of the sweetest and kindest, as well as the youngest and most beautiful of a sex about which he knew nothing.

His new position naturally brought him into close touch with the colonel. The old man transacted a good deal of his business in his own house. Shurtliff was frequently there. Under other circumstances Helen Illingworth would have treated him with that fine and gracious courtesy which she extended to everyone with whom she came in contact, but she would not have especially interested herself in him. She would not have made him the object of the delicate attention and given him the careful consideration which would have completely turned the head of a younger and more susceptible man.

There had been a prejudice in Shurtliff's mind against women in general, and Helen Illingworth in particular. He had quickly realized that she above all persons had the greatest interest in disproving Meade's statement and his own and in laying the blame for the failure of the bridge where it belonged, on the shoulders of the patron to love whom had been the habit of his life. Therefore the old secretary was constantly on his guard lest he be trapped into admissions or actions which might be used to discredit the older Meade and convict the two conspirators.

But Helen Illingworth was far too clever to allow any inkling of such a design to appear. Not the remotest hint of such a purpose did she betray. She deliberately set about to win the old man's regard and respect and perhaps eventually his affection. She had the ordering of her father's household, of course. That was a matter in which the colonel concerned himself not at all so long as things went smoothly, as they always did. He was a little astonished at her treatment of Shurtliff, but the old secretary was at heart a gentleman, and there was no reason why, if Helen chose, to include him among her friends and invite him to dinner and otherwise make him welcome in the house, she should not do so. And in his dry, precise way Shurtliff was rather likable. He was touched and flattered by her kindness, and in spite of his suspicions, which gradually grew less, by the way, he exerted himself to show his appreciation and to bear himself seemingly in his new life.

TO BE CONTINUED.

Troubles.

It's easier to be philosophical about other people's troubles than it is to be quiet about our own.

Good and Bad.

There is a good impulse in the meanest and a mean impulse in the best.

FOR SALE—350 bushels of seed wheat. Inquire of, John T. Homme, 3 miles East and ½ mile south of Highlanding

Ole Yatersund of Erie has bought the medicine business from Eddie Arveson and will sell the McConnon remidies.

Will sell or exchange for property in Thief River Falls the following land, Lot 4 in Section 30 and Lots 1, 2, 3 and NE¼ SW¼ in Sections 31-155-39.

H. O. Kjomme, Thief River Falls, Minnesota.

E. M. Stanton of Thief River Falls came up to attend a meeting of the farmers in this vicinity who are opposed to the estoblishment of Judicial No. 39. He will represent them at the final hearing being held at Bemidji today.

Eggs for setting from two year old White Leghorn chickens at 50 cent per dozen. By mail ten cents extra.

500 pounds clean mixed Clover and Timothy seed for sale at 8 cents per pound.

50 bushels 1915 seed oats at 80 cents per bushel.

Ole Nergaard, Goodridge, Minn.

The directors of the Red Lake East-e. Marshall Farmers Telephone Co., and The Eastern Development Telephone Company, met in the hall here Tuesday to talk over the proposition of operating a joint switch board in Goodridge instead of running two as now is the case. Nothing definite was decided on but it is hoped that they can come to some settlement on this matter as it would be better for all concerned if we only had one central in Goodridge.

There seems to be a large number of the farmers in this section opposed to the establishment of Judicial Ditch No. 39. Two meetings were held here, one on Saturday by farmers of Goodridge and a few from Cloverleaf who hired Attorney Stanton of Thief River Falls to represent them at the final hearing. The other meeting was held Monday by farmers mainly from Reiner township, who will be represented by Attorney James Manahan of Minneapolis. Attorney Sullivan, Manahan's partner attended the meeting held here Monday.

For Rent.

The Bernt Johnson quarter, the NE¼ of Section 4, Township of Highlanding. About 130 acres under cultivation.

Also other farms for rent,

Inquire at Goodridge State Bank

Notice.

I will receive bids up to 7 o'clock P M on the 7th day of May, 1917, for 2 acres of land to be used as a Cemetery for the Village of Goodridge and vicinity, not any further than 1 miles from City limits.

The Council reserves the right to reject any or all bids.

C H. Christianson,
Village Recorder

PUT YOUR HAND AND HEART BACK OF YOUR PRESIDENT!

"It (a state of war) will involve the immediate full equipment of the Navy in all respects," President Wilson told Congress, "but particularly in supplying it with the best means of dealing with the enemy's submarines."

THE NAVY'S GREATEST NEED IS MEN. Congress can supply money and material but MEN MUST VOLUNTEER.

You can enlist at the Navy Recruiting Station at 504 Marquette Ave., Minneapolis, or at the Stations in: St. Paul, Minn., Duluth, Minn., Brainerd, Minn., St. Cloud, Minn., Fargo, N. Dak., Grand Forks, N. Dak. Minot, N. Dak.

Post Office Building.

Giving Pleasure to Others.

The most delicate and the most sensible of all pleasures consists in promoting the pleasures of others.

Hamre News.

Dan Fish and Geo. Shoberg accompanied Walter Shoberg to Goodridge last week, the were on their way to Dakota.

Mr. Rusle and son Melvin spent Sunday with the Thompson family.

John Kyeland and family and Mr. Thronson and wife spent Sunday at the Sviningson home.

Johnny and Henry Morken made a trip to Goodridge and Thief River Falls last week.

Ben Howland and wife attended the sale at Hoff's Thursday.

Oscar and Alvilda Thronson spent Sunday with the Shoberg family.

Glenn Fish spent Friday with Oscar and Henry Thronson.

Lola and Martha Lovaas, Henry and Johnny Morken spent Sunday with Tillie Bykhome.

Fred Sundby and John Grande made a business trip to Howlands Wednesday.

C. P. Thompson made a trip to Morken's Sunday.

Ed. Thronsen made a trip to G. Lee's last week.

T. Torgerson made a business trip to Goodridge, Saturday.

Mr. Counsell, special representative of Favorite Feature Film corporation of Minneapolis, was in Goodridge today and completed arrangements with Manager Palmer of the Grand theater for presentation here of the great human interest play, "The Libertine," which The New York Evening Journal said is "A strong gripping story of modern life with a surprise finish like a breath of June roses bringing close to the hearts of the audience a powerful and timely moral."

According to Mr. Counsell, "The Libertine" has won high commendation from the movie critics where ever the picture has been shown. In practically every city it has broken the attendance records and has been acclaimed by the press and public and from the pulpit as the most remarkable picture of the kind ever filmed.

The story is said to strike at the army of spenders who, having fat purses as the result of the prosperous times in this country in the past few years, are throwing their wealth away on lives of pleasure, never thinking of the proverbial "rainy day" and of those who will have to bear the burden of their foolishness.

In point of photographic excellence, careful direction and selection of players, "The Libertine" is said to rank with the greatest pictures in filmdom.

Smiles drive away the tears in "The Libertine," the great human interest play, which will be seen at the Grand theatre May 11th.

This is one of the really big productions of the past two years and Manager Palmer of the Grand theatre is fortunate in being able to arrange for the presentation here so soon after the picture has been released in the larges cities.

The stars are John Mason, who has appeared on the stage in many of the most popular offerings, and Alma Hanlon, daughter of John Hanlon of the famous Hanlon Brothers, whose "Superba" and "Fantasma" were the talk of theatre goers some years ago. The selection of Mr. Mason for the part of Jim Mills, "the libertine" who could afford to "play the game," and Miss Hanlon, as Elsie Corwin, the cloak model, who could not afford to play with him, could not have been improved on.

The principals are supported by a strong cast which includes Marie Alexander, Walter Hitchcock, Edward Langford and Jean Stuart.

The presentation of "The Libertine" at the Grand theatre should prove to be one of the worthwhile events of the season. The picture handles a vital subject, but does it such a delicate manner that it not only preaches forceful sermon, but leaves the better sort of an impression with the audience.

REMOVAL OF DECAYING WOOD

Pieces Harbor Disease and Insect Pests That Will Soon Spread to Neighboring Trees.

Dead or decaying wood of any fruit plant should be removed as soon as it is noticed, it matters not what the season may be.

Such wood harbors disease and insect pests that will spread to healthy parts of the tree and to neighboring

Ordinance No. 9.

An Ordinance relating to dog licences in the Village of Goodridge, Minn.

The Village council of the Village of Goodridge, Minnesota do ordain as follows:

SECTION I.

That every person owning, keeping harboring any dog before allowing or suffering such dog to run at large within the corporate limits of the Village of Goodridge shall annually on or before the first day of June cause such dog to be registered, numbered and described in the office of the Village recorder of said Village who shall thereupon issue to such person a license, licensing and authorizing such person to keep such dog and every such person so licensed shall pay for such license one Dollar for every male dog and two Dollars for every female dog named in such license

SECTION II

It shall be the duty of the village recorder to keep a correct list of all dogs registered, numbered and described as provided in section one of this ordinance with their number and description.

SECTION 3.

The recorder shall annually within one week after the first of July deliver to the Village Marshall or Village Constable a correct list of the dogs registered or whose owner or keeper have been licensed to keep same for the current year, and shall from time to time, furnish to such Marshall or Constable lists of such dogs as are subsequently registered.

SECTION 4.

Nothing in this ordinance contained shall be so construed as auteorizing the Village Marshall or his deputies to kill any dog, temporarily within the Village of Goodridge with its owner or keeper and which is not owned, kept or harbored therein.

SECTION 5.

It shall be the duty of the Village Marshall or his deputies immediately on receiving from the recorder such list of all dogs registered, numbered and described as aforesaid to kill and bury or cause to be killed and buried, all dogs found at large in said Village, contrary to provisions of this ordinance. The owner or keeper of any dog who allows or suffers such dog to run at large without having complied with the provisions of this ordinance on conviction thereof shall be punished by a fine of not less than five Dollars ($5.00) and not more than twenty Dollars ($20.00) one half to go to the complainant. In default of payment of such fine and cost of persecution said owner and keeper shall be committed to the Village or County jail until such fines are paid or until he is discharged by the President of said Village.

This ordinance shall take effect and be in force from and after its passage.

Passed by the Village council of the Village of Goodridge, Minnesota, this 16th day of April 1917.

H. A. Halvorson,
Village President

Carl Christianson,
Village Recorder.

Stage Play at Mavie.

The Goodridge Literary Society staged their play entitled "Kindling the Hearth Fire" at Mavie Saturday evening. A fair sized crowd was in attendance, but not as large as usual on account of other doings going on in the country. Those in attendance were interested from start to finish and were loud in their praises for the able manner in which everyone went thru their parts. After the play a social time was indulged in which was very much enjoyed by all. Music for the dance was furnished by Bert Walker and Charley Lowery.

Clean up Order — Issued by the Board Of Health,

All residents of the Village of Goodridge are hereby notified to clean up their premises before the 15th day of May, 1917, under pain of incuring the penalty provided by law for neglecting to comply with the ordinance provisions. As a measure for the protection of the public health it is necessary that all winter accumulation is removed before the approach of warm weather. Compliance with this request is earnestly requested.

Signed, Board of Health,
M. G. Thereson

Rural School Notes.

Attention of the teachers is called to the notices of the May H. S. Board Examinations. For the Rural Schools the program is as follows:-

Friday May 25th: Physiology 2:00 p. m.
Tuesday May 29th- American History 8:00 p. m., Spelling (30 min.) 10:15 a. m., 8th Grade Grammar and composition 2:00 p. m.
Thursday May 31st- Arithmetic 8:00 a. m., Geography 2:00 p. m.

Papers must be sent to Co. Supt's. office not later than June 5th.

The teacher, at whose school the examination is held and who will conduct the exams. will mark all the papers of pupils partaking in the examination therein and certify to it. The teachers in the respective schools wanting an examination for any of their pupils should not fail to notify the Co. Supt. as to name and number of pupils, age address, and No. of home Dist. The address of each must be stated to the Deputy Examiner."

The returns of the March Examination are excellent. We trust that a number of pupils will do further justice to themselves and their respective schools by entering in and to pass the May Exam. The Co. Supt. plans in having a county graduation for those who complete the Rural School Course.

The following pupils have passed the March Exams:-

NOTE—The addresses of all of these pupils are not known. Kindly write or call at the office if your certificate is not sent to you.

The school year is drawing to a close and we may say with confidence that teachers and pupils have been hard at work and the result is certainly good. The teachers deserve the hearty thanks of school patrons and school officers for their untiring efforts.

The school year ends while a war cloud hangs over our horison. America is holding its breath for it knows not what manner of disaster the morrow will bring. It behooves, therefore, the youths in our schools to take a survey an inventory of the priviledges they enjoy under the freedom of our country's flag and the protection of their paternal home. Do they, do we realize what free school and freedom of activities, intellectual physical, and morally have meant for us? Think it over boys and girls of our schools and ponder seriously on what your duties to home and country are. If we do this we will have something to say and to do in these awful days so full of possibilities for the American nation.

The County Superintendent has called attention during the spring visitation to certain Boy's and Girl's Contest work outlined by the Extension Dept of the State University. I trust the teachers will impress upon the pupils the value of this work, and, doing this again, I will call attention to certain facts and resolutions adopted by the Red River Crop & Public Welfare Association.

An Organization called the "Red River Valley Crop and Public Welfare Association" was formed at Crookston a few days ago for the purpose of stimulating food production, and in other ways conserving the public welfare. I am acting as chairman of Pennington County on churches and schools under the above association. We are facing a serious war, and, at the same time, a shortage of food.

You are asked as a public school teacher to urge the seeding of wheat, the planting of potatoes, and the cultivation of navy beans. The boys and girls are sure of big prices for all that can be produced. The cultivation of gardens and any vacant plots of ground will help. It is our country that is calling us to help at this critical time.

R. L. Barackman.

(Chairman for schools and churches in Pennington County under the Red River Valley Crop and Public Welfare Ass'n)

The undersigned endorses most heartily the plan outlined above and can not urge too strongly upon teachers to put the matter before the pupils of various school districts. Let us all unitedly help our country in the pending crisis by conserving our economic forces and thus aid in the hour of need.

E. A [illegible]ostue,
County Supt. of schools.

Star News.

(Too late for last week).

Rhinehart Jacobson made a short call on Gilmour Tharaldson Tuesday.

Theodore Jacobson was a caller at Thief River Falls one day last week

Mr. and Mrs. Theodore Sunsdahl were Erie callers, Tuesday.

Oliver Tommerdahl and Halvor Bjornearaa and Amound Bjorgufson were busy hauling seed from Goodridge Friday

Quite a number of automobiles have been seen in this vicinity for the last few days, which is proof that the roads are improving fast. The water is also disappearing fast and the farmers will be out in the fields before many days, if no bad weather sets in.

Knut Berg, Gilmour Tharaldson and Oliver Tommerdahl called at Halvor Bjornearaa's, Monday.

Oliver Tommerdahl has been busy moving to the Theodore Jacobson place.

Sven Bjorgufson visited at Ole Tharaldson one day last week.

(THIS WEEK'S NEWS)

Misses Gertie Bjornearaa and Tillie Bjorgufson were Erie callers Friday afternoon.

Knute and Elling Vake are busy hauling hay from Ole Homme's place.

Henry Tommerdahl was transacting business in Goodridge Friday.

Sven Bjorgufson is busy hauling hay from Edward Hanson's place.

Gilmour Tharaldsot was a Erie visitor [illegible].

Tehor Hovet left Thursday for [illegible] where he will spend a few days.

Gilmour Tharaldsor went to Brinkeleen Saturday on business matters.

Amound Bjorgufson made a short call at Tom Vake's, Friday.

Oliver Tommerdahl made a short call at Knut Roysland's one day last week.

Miss Tillie Bjorgufson was a caller at Oliver Tommerdahl's Wednesday evening.

Halvor Bjornearaa and Gilmour were seen hauling stones, Thursday.

Bjorguf Roysland made a short call at Halvor Bjornearaa's Wednesday.

H. C. Iverson was a Thief River Falls visitor Saturday.

Oliver Tommerdahl was transacting business at Goodridge Saturday.

G. G. Olson was a Erie caller

Eggs for setting from two year old White Leghorn chickens at 50 cents per dozen. By mail ten cents extra.

500 pounds clean mixed Clover and Timothy seed for sale at 8 cents per pound.

50 bushels 1915 seed oats at 80 cents per bushel.

Ole Nergaard, Goodridge, Minn.

The directors of the Red Lake East, Marshall Farmers Telephone Co., and The Eastern Development Telephone Company, met in the hall here Tuesday to talk over the proposition of operating a joint switch board in Goodridge instead of running two as now is the case. Nothing definite was decided on but it is hoped that they can come to some settlement on this matter as it would be better for all concerned if we only had one central in Goodridge.

There seems to be a large number of the farmers in this section opposed to the establishment of Judicial Ditch No. 39. Two meetings were held here, one on Saturday by farmers of Goodridge and a few from Cloverleaf who hired Attorney Stanton of Thief River Falls to represent them at the final hearing. The other meeting was held Monday by farmers mainly from Reiner township, who will be represented by Attorney James Manahan of Minneapolis. Attorney Sullivan, Manahan's partner attended the meeting held here Monday.

For Rent.

The Bernt Johnson quarter, the NE¼, of Section 4, Township of Highlanding. About 130 acres under cultivation.

Also other farms for rent,

Inquire at Goodridge State Bank

Notice.

I will receive bids up to 7 o'clock P M on the 7th day of May, 1917, for 2 acres of land to be used as a Cemetery for the Village of Goodridge and vicinity, not any further than [illegible] miles from City limits.

The Council reserves the right to reject any or all bids.

C H. Christianson,

Village Recorder.

NOTE—The addresses of all of these pupils are not known. Kindly write or call at the office if, your certificate is not sent to you

The school year is drawing to a close and we may say with confidence that teachers and pupils have been hard at work and the result is certainly [illegible]. The teachers deserve the hearty thanks of school patrons and school officers for their untiring efforts.

The school year ends while a war cloud hangs over our horison. America is holding its breath for it knows not what manner of disaster the morrow will bring. It behooves, therefore, the youths in our schools to take a survey an inventory of the priviledges they enjoy under the freedom of our country's flag and the protection of their paternal home. Do they, do we realize what free school and freedom of activities, intellectual physical, and moral have meant for us? Think it over boys and girls of our schools and ponder seriously on what your duties to home and country are. If we do this we will have something to say and to do in these awful days so full of possibilties for the American nation.

The County Superintendent has called attention during the spring visitation to certain Boy's and Girl's Contest work outlined by the Extension Dept of the State University. I trust the teachers will impress upon the pupils the value of this work, and, doing this again, I will call attention to certain facts and resolutions adopted by the Red River Crop & Public Welfare Association.

An Organization called the "Red River Valley Crop and Public Welfare Association" was formed at Crookston a few days ago for the purpose of stimulating food production, and in other ways conserving the public welfare. I am acting as chairman of Pennington County on churches and schools under the above association. We are facing a serious war, and, at the same time, a shortage of food.

You are asked as a public school teacher to urge the seedidg of wheat, the planting of potatoes, and the cultivation of navy beans. The boys and girls are sure of big prices for all that can be produced. The cultivation of gardens and any vacant plots of ground will help. It is our country that is calling us to help at this critical time.

R. L. Brackman.

(Chairman for schools and churches in Pennington County under the Red River Valley Crop and Public Welfare Ass'n)

The undersigned endorses most heartily the plan outlined above and cannot urge too strongly upon teachers to put the matter before the pupils of various school districts. Let us all unitedly help our country in the pending crisis by conserving our economic forces and thus aid in the hour of need

E. A. Fostue,

County Supt. of schools.

Star News.

(Too late for last week).

Rhinehart Jacobson made a short call on Gilmour Tharaldson Tuesday.

Theodore Jacobson was a caller at Thief River Falls one day last week

Mr. and Mrs. Theodore Sunsdahl were Erie callers Tuesday.

Oliver Tommerdahl and Halvor Bjornearra and Amound Bjorgufson were busy hauling seed from Goodridge Friday

Quite a number of automobiles have been seen in this vicinity for the last few days, which is proof that the roads are improving fast. The water is also disappearing fast and the farmers will be out in the fields before many days, if no bad weather sets in.

Knut Berg, Gilmour Tharaldson and Oliver Tommerdahl called at Halvor Bjornearra's, Monday.

Oliver Tommerdahl has been busy moving to the Theodore Jacobson place.

Sven Bjorgufson visited at Ole Tharaldson one day last week

(THIS WEEK'S NEWS)

Misses Gertie Bjornearaa and Tillie Bjorgufson were Erie callers Friday afternoon.

Knute and Eiling Vake are busy hauling hay from Ole Homme's place.

Henry Tommerdahl was transacting business in Goodridge Friday.

Sven Bjorgufson is busy hauling hay from Edward Hanson's place.

Gilmour Tharaldson was a Erie visitor [illegible]

Teho Hove left Thursday for Gary where he will spend a few days.

Gilmour Tharaldson went to [illegible] Saturday on business matters.

Amound Bjorgufson made a short call [illegible], Friday.

Oliver Tommerdahl made a short call at Knut Roysland's one day last week.

Miss Tillie Bjorgufson was a caller at Oliver Tommerdahl's Wednesday evening.

Halvor Bjornearaa and Gilmour were seen hauling stones, Thursday.

Bjorgulf Roysland made a short call at Halvor Bjornearaa's Wednesday.

H. C. Iverson was a Thief River Falls visitor Saturday.

Oliver Tommerdahl was transacting business at Goodridge Saturday.

G. G. Olson was a Erie caller [illegible] day.

INTENTIONAL DUPLICATE EXPOSURE

HER HOPE CHEST

By SYLVIA TURNER.

"I never saw one before, Cousin Jess. It must be more fun getting it stocked up. How do you start one? Do you have to wait until you meet someone you like best?"

"No. You start in on hopes, dear, don't you see? You hope the right one may come, and you try to be ready for him."

"But didn't you ever—you don't mind my asking, do you—have anybody—I mean—didn't it ever seem as if you might use the things?"

"Yes, once." Jessica's tone was quite impersonal and cheery. "When I was nineteen. We had a new minister. He was quite young, and very talented. It was a shame to waste him here in this little dead and alive place. We were engaged to be married for several months."

"Then what?" Dora rested her rounded chin on her palm eagerly. She did admire this self-sufficient, charming cousin greatly. After the steady round of humdrum life in Hollywood is was like a real glimpse into the outside world of endeavor and achievement to have her visit them.

"Then I just broke it. Because he refused a call to a city church. I was ambitious, and he felt that his duty lay here."

"But haven't you ever really been in love—I mean so it hurt you?"

"Yes, I have loved, richly and fully, and, my dear, he never knew. Close up the hope chest. I'll give you everything in it when you are ready to have your own bridal veil pinned on."

"And not one single word more would she say, mother, dear," Dora exclaimed that night when she had told Mrs. Dinsmore of the hope chest story. "Who do you suppose it was?"

Mrs. Dinsmore shook her head with a little smile. But the following day while she was driving through the little town with Jessica, she bowed to someone just emerging from the City hotel.

"It's Greg Ivesson," she said, casually. "He's our city attorney, and running for the legislature, too. He made a splendid record on some factory cases. He pushed several cases and won them. Harley Lane stood back of him and led the better town element on his side. You remember Harley, of course. He's still minister here at Grace church."

"I—I always thought he was so conservative," said Jessica, haltingly. She was frowning.

"Well, he was, until he married Nellie Stevens. She made a splendid wife for Harley. It means everything to a man, what kind of a woman he chooses for a wife. To a man like either Harley or Greg Ivesson, marriage would mean more than just love and companionship. A woman would be the inspiration of their life. If she could not be this, I am sure—"

Jessica gave a quick cry as the horse swerved and backed. In an instant it had reared and bolted straight down the street, headed for the railroad tracks. Greg Ivesson had just stepped into his car when the horse started. As it swung down the street he followed, bending low over the wheel, seeing, not so much the swaying carriage, as the figure to the right—Jessica Hayes. Just as they came to the tracks there was a whistle of the down express. It did not stop at Hollywood, he knew, and the frenzied horse made straight for the crossing with ears laid back and staring eyes. How he did it he never could have told, but he turned the car directly across its path, and the two came together heavily, the car and the carriage, but the express swept on. And the figure on the ground was Greg's.

Jessica's stay had lengthened from one week to six. Every day she went with Mrs. Dinsmore to call at the hotel and ask after Greg. During the time when he lay unconscious that first day she sat alone, thinking of all her aunt had said. A woman should be the inspiration for a man like him or Harley. She had not been.

When Greg was better Mrs. Dinsmore insisted on his coming up to the Pines as her guest for a rest.

"You know, in spite of his success, he leads rather a monotonous life. You won't mind, will you Jess?" innocently.

"Oh, not at all," answered Jess. "I'm going Monday, anyway."

But Sunday as she passed along the walk to the street to join Dora she heard her name spoken. Greg came toward her from the stables.

"You've changed so wonderfully," he said to her. "I remember you as a girl here. I mean when you were about eighteen. Perhaps you never guessed it, but I was awfully in love with you then."

"I never guessed it," said Jessica, with a curious little smile. "I expect I was rather selfish."

"But even though I never told you Jess, you became my inspiration in my work. A real love is that to a man. Perhaps if I had married you then, we would have been unfitted for each other, while now—well, I'm waiting for your answer, dear."

When Dora heard the news of the coming wedding she gave a little cry of make-believe regret.

"Oh, Cousin Jess, I lose the hope chest, don't I?"

But Jessica shook her head smilingly.

"You may keep it, dear. I'd rather start out on new hopes than those buried away in old lavender."

(Copyright, 191[illegible], by the McClure Newspa[illegible])

CARRIED AWAY

"You can hardly blame people for the mere fact that they are fools, because they are born that way."

"Quite true."

"But I have no patience with the kind of people who are continually advertising their lack of common sense."

"Proceed."

"I was walking through one of those measly little moth-eaten city parks about a block square the other day when a poetical-looking chap paused near a dusty shrub, clasped his hands together and exclaimed, 'Oh, how I love the great outdoors!'"

A Woman's Theory.

"It was my painful duty to decline an offer of marriage from Professor Brainard last night," said the young widow.

"Indeed," said her lady friend. "Why did you refuse him? He is considered the most eminent mathematician of the age."

"Yes, and that is just why I refused him," said the y. w. "He would be always trying to mathematically demonstrate the errors in my dressmaker's bills."

TO THE POINT

Howe—Every rose has its thorn.
Wise—Also its price.

The Touch Oblique.

I like to hear a funny yarn,
But listen to my sorrow:
When he who tells it says: "Please lend
Me fifty till tomorrow."

Drawing the Line.

"No," said the fussy old bachelor with the absent hair, "I'm not an advocate of boarding-house socialism. No, indeed!"

"What do you mean by boarding-house socialism?" queried the new boarder.

"It's the kind," explained the f. o. b., "that gives everybody an equal chance at the piano."

Not an Expansionist.

He—Then there is no hope for me?

She—Not a hope.

He—But you admit you love me.

She—You have said it.

He—Then why do you refuse to marry me?

She—Lack of confidence.

He—In me?

She—No; in my ability to support a husband properly.

Proof to the Contrary.

"No matter what sort of paper Mrs. Diggs reads at her club meetings, her spiteful neighbors always say Professor Diggs wrote it."

"What nonsense! Last week she read a paper on 'The Benefits Derived From Fresh Air,' and Professor Diggs hasn't permitted the windows of his study to be raised in 20 years."

Parental Training.

Smith—How old is your son, Jones?

Jones—He will be twenty-one tomorrow.

Smith—He's certainly a credit to you.

Jones—Well, he ought to be. I spent 15 years in bringing him up and six more in calling him down.

RAN TOGETHER

She—Well, we'd never have been married if you hadn't run after me.

He—No. And if you'd run away instead of toward me when I ran after you, we wouldn't, either.

The Lust for Power.

"Have you a law and order league in this town?"

"We used to have one, but it disbanded."

"What was the trouble?"

"Too many of the members wanted to lay down the law and issue orders."

Can't Be.

"Are they influential?"

"Hardly. Their automobile is last [illegible]—Judge.

BIG [illegible] FISH TRADE

Public Could Buy Its Seafood Much Cheaper If Industry Were on Efficient Basis, It Is Declared.

If the entire fishing industry were put on an efficiency basis, the general public would buy its seafood much cheaper and better, is the opinion of William K. Beardsley, manager of the New England fish exchange. He asserts, however, that even under present conditions fish is the most economical of foodstuffs in this country.

"The fishing industry has been conducted in a more or less haphazard manner," he says. "Small competition has developed it, but up to date little has been done to put it on a sound business basis. Those intimately connected with the industry do not seem to realize that the extensive waste must be eliminated and efficiency brought in.

"For example, dealers still ship fish in small quantities everywhere. This necessitates enormous transportation expenses with slow service, when the same goods could be shipped in carload lots to control distributing points, and much needless expenditure saved.

"Fish is the coming food of America, and it therefore behooves this country to awaken to the value of its fisheries. It is also necessary for our fish merchants to awaken to the value of efficiency and place their trade on a systematic basis. Every dollar wasted comes out of the public's pockets, so that the people as a whole have a vital interest in this matter."

Continuing, he states that government experts contend that before long this country will be actually forced to look to its fisheries for food.—New York Times.

TOWN LIFE REAL DRUDGERY

Let Country Boys Get a Taste of the City, and They Will Want to Stay on Farm, It Is Declared.

Why not encourage the boys to familiarize themselves with town life to some extent? Our word for it, they would soon lose many of their illusions, says the Natchitoches (La.) Times. Let a boy go among the young men who are filling positions in the town. Impress upon him that these men, instead of living like millionaires, are in reality worse drudges than he; that while he sometimes must work early and late for a very short season, these young men must frequently be at their work before he is out of bed, and must remain there until he is back in bed again; and that as to the matter of fine clothes, frequently the suits he sees on their backs comprise their entire wardrobe. Let him also learn that while they frequently handle much money, very little of its sticks to their fingers except with ugly results to themselves.

Let the boy come to town. Let him have a taste of town life and make the acquaintance of town boys. Let him learn, as he is bound to do, that not by any means is all gold that glitters. Thus, with the right surroundings and conditions on the farm, an occasional dose of town life will not hurt him, and he will soon grow to see that his own life is infinitely to be preferred to that of any town boy of his acquaintance.

Simple Fire Alarm.

A new automatic fire alarm has just been put on the market which is so cheap and simple that it can be installed almost anywhere. It will give the small private house the same protection that is afforded to large plants by more complicated systems. The new alarm consists simply of a small air chamber and an electric bell. The chamber is pierced with very fine holes. When the temperature of the room changes in a gradual and natural manner the holes permit the air in the chamber to pass slowly in and out. But if the temperature rises rapidly, as it does in case of fire the holes are too small to take care of the quick expansion of the imprisoned air. The walls of the chamber are pushed outward and close an electric circuit which rings the alarm bell.

Knitting in Church.

Knitting in church is suggested by Rev. A. M. Mitchell, a Church of England clergyman, in his parish magazine. "Better to knit for our soldiers and sailors in sermon time," he says, "than to talk and whisper, laugh and giggle, flirt and misbehave, criticize hats, gowns and fur coats. Those constantly knitting learn to do so quite mechanically and their attention is not diverted from speech. Knitting in sermon time would mean a great saving of time."

He Was "Taken In."

A battered specimen of a man, with a bump on his head and bruises on his face walked into the office of a Muncie newspaper not long ago and said to the first man he saw there: "Say, I want you to make things right with me. You said in yesterday's paper, speaking of my joining a lodge, that I was 'taken in.' Well, I was, but I don't want everybody to know it."—Indianapolis News.

Naturally.

He—Why don't you take a more suitable time to go to your dressmaker?

She—My dear man, all times to go to a dressmaker are fitting ones.

Painful Fix.

"Flubdub has a boil on the back of his neck."

"Yes, and, what's worse, there seems to be no adequate way of blaming it on his wife."

HER HOPE CHEST

By SYLVIA TURNER.

"I never saw one before, Cousin Jess. It must be more fun getting it stocked up. How do you start one? Do you have to wait until you meet someone you like best?"

"No. You start in on hopes, dear, don't you see? You hope the right one may come, and you try to be ready for him."

"But didn't you ever—you don't mind my asking, do you—have anybody—I mean—didn't it ever seem as if you might use the things?"

"Yes, once." Jessica's tone was quite impersonal and cheery. "When I was nineteen. We had a new minister. He was quite young, and very talented. It was a shame to waste him here in this little dead and alive place. We were engaged to be married for several months."

"Then what?" Dora rested her rounded chin on her palm eagerly. She did admire this self-sufficient, charming cousin greatly. After the steady round of humdrum life in Hollywood it was like a real glimpse into the outside world of endeavor and achievement to have her visit them.

"Then I just broke it. Because he refused a call to a city church. I was ambitious, and he felt that his duty lay here."

"But haven't you ever really been in love—I mean so it hurt you?"

"Yes, I have loved, richly and fully, and, my dear, he never knew. Close up the hope chest. I'll give you everything in it when you are ready to have your own bridal veil pinned on."

"And not one single word more would she say, mother, dear," Dora exclaimed that night when she had told Mrs. Dinsmore of the hope chest story. "Who do you suppose it was?"

Mrs. Dinsmore shook her head with a little smile. But the following day while she was driving through the little town with Jessica she bowed to someone just emerging from the City hotel.

"It's Greg Ivesson," she said casually. "He's our city attorney, and running for the legislature, too. He made a splendid record on some factory cases. He pushed several cases and won them. Harley Lane stood back of him and led the better town element on his side. You remember Harley, of course. He's still minister here at Grace church."

"I—I always thought he was so conservative," said Jessica, haltingly. She was frowning.

"Well, he was, until he married Nellie Stevens. She made a splendid wife for Harley. It means everything to a man, what kind of a woman he chooses for a wife. To a man like either Harley or Greg Ivesson, marriage would mean more than just love and companionship. A woman would be the inspiration of their life. If she could not be this, I am sure—"

Jessica gave a quick cry as the horse swerved and backed. In an instant it had reared and bolted straight down the street, headed for the railroad tracks. Greg Ivesson had just stepped into his car when the horse started. As it swung down the street he followed, bending low over the wheel, seeing, not so much the swaying carriage, as the figure to the right—Jessica Hayes. Just as they came to the tracks there was a whistle of the down express. It did not stop at Hollywood, he knew, and the frenzied horse made straight for the crossing with ears laid back and staring eyes. How he did it he never could have told, but he turned the car directly across its path, and the two came together heavily, the car and the carriage, but the express swept on. And the figure on the ground was Greg's.

Jessica's stay had lengthened from one week to six. Every day she went with Mrs. Dinsmore to call at the hotel and ask after Greg. During the time when he lay unconscious that first day she sat alone, thinking of all her aunt had said. A woman should be the inspiration for a man like him or Harley. She had not been.

When Greg was better Mrs. Dinsmore insisted on his coming up to the Pines as her guest for a rest.

"You know, in spite of his success, he leads rather a monotonous life. You won't mind, will you Jess?" innocently.

"Oh, not at all," answered Jess. "I'm going Monday, anyway."

But Sunday as she passed along the walk to the street to join Dora she heard her name spoken. Greg came toward her from the stables.

"You've changed so wonderfully," he said to her. "I remember you as a girl here. I mean when you were about eighteen. Perhaps you never guessed it, but I was awfully in love with you then."

"I never guessed it," said Jessica, with a curious little smile. "I expect I was rather selfish."

"But even though I never told you Jess, you became my inspiration in my work. A real love is that to a man. Perhaps if I had married you then, we would have been unfitted for each other, while now—well, I'm waiting for your answer, dear."

When Dora heard the news of the coming wedding she gave a little cry of make-believe regret.

"Oh, Cousin Jess. I lose the hope chest, don't I?"

But Jessica shook her head smilingly.

"You may keep it, dear. I'd rather start out on new hopes than those buried away in old lavender."

CARRIED AWAY.

"You can hardly blame people for the mere fact that they are fools, because they are born that way."

"Quite true."

"But I have no patience with the kind of people who are continually advertising their lack of common sense."

"Proceed."

"I was walking through one of those measly little moth-eaten city parks about a block square the other day when a poetical-looking chap paused near a dusty shrub, clasped his hands together and exclaimed, 'Oh, how I love the great outdoors!'"

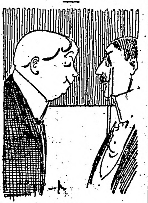
A Woman's Theory.

"It was my painful duty to decline an offer of marriage from Professor Brainard last night," said the young widow.

"Indeed," said her lady friend. "Why did you refuse him? He is considered the most eminent mathematician of the age."

"Yes, and that is just why I refused him," said the y. w. "He would be always trying to mathematically demonstrate the errors in my dressmaker's bills."

TO THE POINT



Howe—Every rose has its thorn.

Wise—Also its price.

The Touch Oblique.

I like to hear a funny yarn,
But listen to my sorrow.
When he who tells it says: "Please lend
Me fifty till tomorrow."

Drawing the Line.

"No," said the fussy old bachelor with the absent hair, "I'm not an advocate of boarding-house socialism. No, indeed!"

"What do you mean by boarding-house socialism?" queried the new boarder.

"It's the kind," explained the f. o. b., "that gives everybody an equal chance at the piano."

Not an Expansionist.

He—Then there is no hope for me?

She—Not a hope.

He—But you admit you love me.

She—You have said it.

He—Then why do you refuse to marry me?

She—Lack of confidence.

He—In me?

She—No; in my ability to support a husband properly.

Proof to the Contrary.

"No matter what sort of paper Mrs. Diggs reads at her club meetings, her spiteful neighbors always say Professor Diggs wrote it."

"What nonsense! Last week she read a paper on 'The Benefits Derived From Fresh Air,' and Professor Diggs hasn't permitted the windows of his study to be raised in 20 years."

Parental Training.

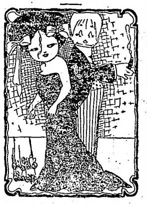
Smith—How old is your son, Jones?

Jones—He will be twenty-one tomorrow.

Smith—He's certainly a credit to you.

Jones—Well, he ought to be. I spent 15 years in bringing him up and six more in calling him down.

RAN TOGETHER



She—Well, we'd never have been married if you hadn't run after me.

He—No. And if you'd run away instead of toward me when I ran after you, we wouldn't, either.

The Lust for Power.

"Have you a law and order league in this town?"

"We used to have one, but it disbanded."

"What was the trouble?"

"Too many of the members wanted to lay down the law and issue orders."

Can't Be.

"Are they influential?"

"Hardly. Their automobile is last

BIG WASTE IN FISH TRADE

Public Could Buy Its Seafood Much Cheaper If Industry Were on Efficient Basis, It Is Declared.

If the entire fishing industry were put on an efficiency basis, the general public would buy its seafood much cheaper and better, is the opinion of William K. Beardsley, manager of the New England fish exchange. He asserts, however, that even under present conditions fish is the most economical of foodstuffs in this country.

"The fishing industry has been conducted in a more or less haphazard manner," he says. "Small competition has developed it, but up to date little has been done to put it on a sound business basis. Those intimately connected with the industry do not seem to realize that the extensive waste must be eliminated and efficiency brought in.

"For example, dealers still ship fish in small quantities everywhere. This necessitates enormous transportation expenses with slow service, when the same goods could be shipped in carload lots to control distributing points, and much needless expenditure saved.

"Fish is the coming food of America, and it therefore behooves this country to awaken to the value of its fisheries. It is also necessary for our fish merchants to awaken to the value of efficiency and place their trade on a systematic basis. Every dollar wasted comes out of the public's pockets, so that the people as a whole have a vital interest in this matter."

Continuing, he states that government experts contend that before long this country will be actually forced to look to its fisheries for food.—New York Times.

TOWN LIFE REAL DRUDGERY

Let Country Boys Get a Taste of the City and They Will Want to Stay on Farm, It Is Declared.

Why not encourage the boys to familiarize themselves with town life to some extent? Our word for it, they would soon lose many of their illusions, says the Natchitoches (La.) Times. Let a boy go among the young men who are filling positions in the town. Impress upon him that these men, instead of living like millionaires, are in reality worse drudges than he; that while he sometimes must work early and late for a very short season, these young men must frequently be at their work before he is out of bed, and must remain there until he is back in bed again; and that as to the matter of fine clothes, frequently the suits he sees on their backs comprise their entire wardrobe. Let him also learn that while they frequently handle much money, very little of its sticks to their fingers except with ugly results to themselves.

Let the boy come to town. Let him have a taste of town life and make the acquaintance of town boys. Let him learn, as he is bound to do, that not by any means is all gold that glitters. Thus, with the right surroundings and conditions on the farm, an occasional dose of town life will not hurt him, and he will soon grow to see that his own life is infinitely to be preferred to that of any town boy of his acquaintance.

Simple Fire Alarm.

A new automatic fire alarm has just been put on the market which is so cheap and simple that it can be installed almost anywhere. It will give the small private house the same protection that is afforded to large plants by more complicated systems. The new alarm consists simply of a small air chamber and an electric bell. The chamber is pierced with very fine holes. When the temperature of the room changes in a gradual and natural manner the holes permit the air in the chamber to pass slowly in and out. But if the temperature rises rapidly, as it does in case of fire the holes are too small to take care of the quick expansion of the imprisoned air. The walls of the chamber are pushed outward and close an electric circuit which rings the alarm bell.

Knitting in Church.

Knitting in church is suggested by Rev. A. M. Mitchell, a Church of England clergyman, in his parish magazine. "Better to knit for our soldiers and sailors in sermon time," he says, "than to talk and whisper, laugh and giggle, flirt and misbehave, criticize hats, gowns and fur coats. Those constantly knitting learn to do so quite mechanically and their attention is not diverted from speech. Knitting in sermon time would mean a great saving of time."

He Was "Taken In."

A battered specimen of a man, with a bump on his head and bruises on his face walked into the office of a Muncie newspaper not long ago and said to the first man he saw there: "Say, I want you to make things right with me. You said in yesterday's paper, speaking of my joining a lodge, that I was 'taken in.' Well, I was, but I don't want everybody to know it."—Indianapolis News.

Naturally.

He—Why don't you take a more suitable time to go to your dressmaker?

She—My dear man, all times to go to a dressmaker are fitting ones.

Painful Fix.

"Flubdub has a boil on the back of his neck."

"Yes, and what's worse, there seems to be no adequate way of blaming it on his wife."

IS THIS TOWN A WAREHOUSE SUBURB OR NOT

By HONORE WILLSIE, Editor of the Delineator.

Two years ago the Delineator started an architectural series which we called The House That Grows. The plan was to present a house in three stages of growth, each stage being complete and habitable. One could live in the first stage until financially able to add the second, then the third. The idea was to satisfy the American desire for growth and improvement without sacrificing America's great need for permanent homes.

For the lack of homes is one of America's fundamental weaknesses. It goes hand in hand with our lack of family pride, and this breeds inevitably a lack of civic pride.

Community pride follows the love of home as surely as fine growth follows rich planting. And community pride dies where there is no community of interests.

The great complaint against the average suburban town is that it lacks interest in itself. You can't get the merchants and the townspeople to co-operate to any extent.

And the stores are poor and the suburban population is shifting and unreliable.

Doesn't this apply as well to the towns given over to mail order buying? Do you want your town, the town in which you have started your home, to thrive and improve? Well, it won't thrive and improve unless the tradespeople in your town are getting and giving a fair deal. Mail order buying turns your town into a suburb of a great city mail order house. It is taking out of your town the life blood, the circulation of which nourishes your home as well as those of your neighbors. It doesn't pay. That is why I'm glad The Delineator has excluded mail order announcements from the advertising columns. It has removed from our readers' homes a powerful temptation to buy away from home."

ROYAL RAIMENT FROM AMERICAN SPECIFICATIONS

Royal wardrobes from American dress patterns? Ridiculous!

Nevertheless it is a fact that for years the nobility of England, France, Germany and other European powers have been fashioning the garments of their women folks from identically the same tissue paper pattern that is on sale in practically every nook and corner of the United States.

The funny part of it is that, while the world recognizes that Paris originates style, few people realize that the distribution of style information and the adaptation of Paris creations to the world's millions of well-dressed women are entirely in the hands of Americans.

There is one sixteen story building in New York city entirely devoted to the business of making dress patterns and publishing magazines which go to the four corners of the earth regularly with style information gathered from the fashion centers of the world, particularly Paris. These magazines not only are read in the United States to the extent of 1,500,000 a month, but the counterpart of one of them goes regularly to England, France, Germany, Italy and the Spanish speaking countries in editions especially preparer in those languages.

Furthermore, the paper patterns, which reproduce the fashions illustrated and explained in this magazine, also go to all of these countries, where they outsell all similar magazines and patterns indigenous to those lands.

And the best part of it all is that the woman who lives in Paris, Tex., is enabled to buy the very latest pattern from the house of Butterick at the same time that the woman of Paris, France, is seeking the same pattern in the Avenue de l' Opera shop of the concern. An interesting exhibit at the New York plant is a collection of original letters from titled ladies of Europe ordering Butterick patterns or the foreign editions of The Delineator. There are so many of these letters from French, English, German, Austrian, Russian and Scandinavian noblewomen that the eleven vellum bound volumes in which they are kept are known as "Butterick's Peerage." One letter is from the British Royal household, advising that the present Prince of Wales as a child was dressed by Butterick patterns. This supremacy of a United States institution in fashion distribution is certainly gratifying to every red blooded American who believes in "America Over All."

CIVIL ENGINEER

Copyright by Fleming H. Revell Company

SYNOPSIS.

CHAPTER I—Bertram Meade is consulting engineer representing his father, the great Meade, who is the designer of the International bridge, the greatest cantilever structure the world has ever heard of. In the shadow of the uncompleted bridge young Meade receives Colonel Illingworth, president of the Martlet Bridge company, the constructors, and the colonel's daughter, Helen, whom he loves.

CHAPTER II—At dinner the possible weakness of the compression members of the bridge is talked of and Meade defends his father's calculations.

CHAPTER III—Meade and Helen go out upon the bridge in the moonlight and Helen narrowly escapes a fall to the river below. Meade tells his love and they go to the colonel, who approves their marriage when the bridge is finished.

CHAPTER IV—Abbott, the construction engineer, tells Meade there is a deflection in member C-10-R, but makes light of it. Meade, after vainly trying to stop the work, wires his father and follows the telegram to New York.

CHAPTER V—At the great engineer's office father and son try to prevent disaster, but young Meade only reaches Colonel Illingworth as a message comes that the bridge, with 150 men, is in the river.

CHAPTER VI—Abbott goes on with the work, ignoring Meade's protests, but while uneasily inspecting C-10-R the lacings snap under his eyes and he goes into eternity with the other men on the falling bridge.

CHAPTER VII—Young Meade has pointed out to his father the possible weakness, but his objections have been overruled. His father now prepares a statement showing his own fault and sends his secretary, Shurtliff, to the Gazette with it.

CHAPTER VIII—Young Meade, on his return, meets Rodney, an old college friend, and other reporters at the door of his father's office. He finds his father dead from heart failure. He assumes entire responsibility for the catastrophe. Shurtliff, who has not obeyed orders, but concealed the papers the dead man had given him to make public, also accuses the younger Meade.

CHAPTER IX—In her father's presence and over her protest Meade breaks his engagement with Helen.

CHAPTER X—Out West, at a big irrigation dam under construction, Meade begins life over again as a rodman under an assumed name.

CHAPTER XI—Meade has gone to the ranch of Winters, a college friend, and there takes stock of himself and the terrible responsibility he has assumed to save his father's name from dishonor. He makes the new start as an unknown.

CHAPTER XII—Helen and Rodney conspire to save Meade from his own false confession in spite of himself. Shurtliff has been employed by the colonel and Helen, thinking he knows the truth, sets out to win his confidence.

CHAPTER XIII—Meade gains the confidence of Vandeventer, his chief, though he refuses to tell his own story. He is promoted.

CHAPTER XIV — Unexpected rains threaten the dam before the spillway is in shape to carry off surplus water.

CHAPTER XV—Continued rains force Vandeventer and his men into an almost superhuman fight to prevent the flood waters from carrying away the dam. Disaster is imminent though every emergency means known to engineering skill is used.

CHAPTER XVI—Helen gains Shurtliff's confidence but is unable to get any admission from him. Meade has dropped out of sight and the only remembrance she has of him is the flowers that come to her daily from a sender unnamed.

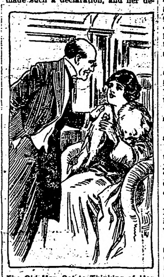
Colonel Illingworth had no suspicions whatsoever that there had been any conspiracy to suppress the truth and shift the blame. True, his daughter had protested on that fatal day that she did not believe Meade and Shurtliff, but that was in the excitement of the moment and understandable in view of her plighted troth. Helen had never discussed that with him; even the very name of the engineer being banned, she was silent. She was wise enough not to try to worry or bother her father with arguments on that point, to which, of course, he would not have listened in any event.

Accordingly the conferences with Rodney had never been brought to his notice. There was no use stirring up trouble and strife. There was no necessity even to discuss it with her father until she had found more proof. So he at least had no suspicions as to her treatment of Shurtliff. He could not see any end to be gained and therefore he jumped to the conclusion that there was none.

In course of time, as Miss Illingworth never referred to Meade in the secretary's presence, all his mistrust disappeared. Finally he even brought up the subject of Meade's whereabouts of his own motion. Although the girl was fairly wild to talk and ask questions she had wit and resolution enough to change the subject when it had been first broached and for many times thereafter.

Helen Illingworth was fighting for the reputation of the man she loved and for her own happiness, and she was resolved to neglect no point in the game. She partook in a large measure of her father's capacity, but she added to his somewhat blunt and military way of doing things the infinite tact of woman, stimulated by a growing, overwhelming devotion to her absent lover. She cherished that feeling for him in any event and would have done so but the whole situation was so charged with mystery and surcharged with romance that it made the most powerful and stimulating appeal to her.

She lived to vindicate Meade and she bent every effort toward that end. She did not overdo it, either. Finally, as he himself continued to press the subject upon her, she made no secret to Shurtliff of her devotion to the younger Meade, her sorrow that he had made such a declaration, and her determination to wait for him. She was always careful to end every conversation by saying that she knew her outlook was perfectly hopeless and that she could expect nothing except sorrow until the younger Meade was rehabilitated. She so contrived matters, while constantly affirming her feeling for Meade, as to let Shurtliff infer that she was convinced that he had been **telling the truth in what he had said.**



The Old Man Got to Thinking of Her as a Daughter.

After a time she deftly appealed to him to know if he could not help her discover the truth she tactfully maintained even in face of the evidence that Shurtliff had given. And she did this in such an adroit way that Shurtliff became convinced that she did not connect him with any willful deception, and that she believed that he was deluded himself and occupied the position of an innocent abettor. And Shurtliff, in his strange, old, self-contained way, finally grew to like Helen Illingworth exceedingly. Indeed he started in his work with natural antagonism to Colonel Illingworth, and when he sensed, as he very soon did, the difference that had arisen between father and daughter, he espoused the cause of the latter. He was the kind of a man who had to devote himself to somebody. He began to wonder if there was any way to secure the girl's happiness without betraying the elder Meade.

She compassed the secretary, who was, of course, old enough to be her father, with sweet observances and he found it increasingly hard to keep true to his falsehood. Now she was capable of fascinating bigger personalities than Shurtliff, although she cared little for that power and rarely exercised it. The old man actually got to thinking of her as a daughter. Sometimes when they had an hour together he found himself seconding her arguments for the innocence of the younger Meade, for she had progressed that far by now, with little details which his knowledge and experience of the two men could supply. Trifling in themselves as were these contributions, as Rodney pointed out when she repeated them to him, they nevertheless added something to the cumulative force of the argument so laboriously built up by the friend and woman. And they were decidedly indicative of a growing mental condition on the part of Shurtliff from which much might be hoped and expected.

But Shurtliff could not bring himself to come out boldly and confess, and his failure to do that made him more and more miserable. At first his conscience had been entirely clear. He had viewed his conduct in the light of a noble sacrifice for the great man. Now he began to question: Was it right to blast the future of the living for the sake of the fame of the dead? Probably he would have questioned that eventually without regard to Helen Illingworth, but when he began to grow fond of the woman and when he realized, as she unmistakably disclosed it to him, that her own happiness was engaged and that he was not only ruining the career of a man but wrecking the life and crushing the heart of an entirely innocent woman, he had a constant battle royal with himself to pursue his course and to keep silent.

Yet such is the character of a temperament like that of Shurtliff, narrowed and contracted by a single passion of life and lacking the breadth which comes from intercourse with men and women, that his compunctions of conscience only made him the more resolved. The lonely, heart-broken old man swore that he would never tell. The young man could go his own gait and work out his own salvation, or be damned, if he must. The woman's heart might break, pitiful as that would be, but he would never tell. He was as unhappy in that determination as any other man fighting against his conscience must inevitably be.

Sometimes looking at the misery in the old man's face (for on his countenance his heart wrote his secret). Helen Illingworth experienced compunctions of conscience of her own which she told to Rodney in default of other confessor. That fine young man appreciated fully the woman's feelings and understood her keen sensibilities, and his comprehension was a great comfort to her. He encouraged her to persevere. Since it was only through Shurtliff that the truth could be established, she must not falter nor reject any fair and reasonable means to gain his whole confidence and make him speak. It was, after all, simply a question of whether the game was worth the candle. How best could they expose or fight a deceit? And that the deception was for a noble purpose and to serve a laudable end in the minds of the deceivers did not alter that fact.

"You are doing nothing in the least degree dishonorable, Miss Illingworth," said Rodney, reassuringly. "Woman's wiles have been her weapons since the Stone Age."

"But I do feel compunctions of conscience occasionally."

"Personally I think you are abundantly justified," urged Rodney.

"Yes, to establish the truth, to give the man I love his good name would justify more than this," she replied, "and yet"—she smiled faintly—"my conscience does hurt me a little. The old man is beginning to love me."

"That's the reason it hurts you," said Rodney. "When he loves you enough he will do anything you want, as I would—"

The young man stopped, looked long at her, and then turned away with a little gesture of—was it appeal or renunciation? He was too loyal to his friend to speak, but he could not control everything. The tone of his voice, the look in his eyes, his quick avoidance of her, told the woman a little story. They had been very closely associated, these two. Rodney also had not had much advantage of woman's society, certainly not of a woman like Helen Illingworth. She had given him her full confidence in the intimacy. He was a man. He loved like others. She was too fond of him, too great, too true a woman to pretend.

"Mr. Rodney," said the girl, laying **her hand on his arm as though to restrain him**, "that way madness lies."

"Miss Illingworth," said Rodney, turning and facing her, his lips firmly compressed, his eyes shining. "I'm devoted to Bert Meade and to you"—he lifted her hand from his arm and kissed it—"and I'm going to do everything for your happiness."

Brave words and he said them more bravely.

"I understand," said the woman, "and I honor you for your loyalty to your friend and your devotion to me. Loyalty is not always the easiest thing on earth, I know."

"You make it easy for me because you understand."

So the fall and winter were filled with interest to Helen Illingworth and there was in her days no lack of hope. Every Saturday the flowers that Meade had arranged for spoke words of love to her and bade her not forget, although that was admonition she did not need.

That was the only message that she received from her lover. He had dropped out of sight completely. They caused search to be made for him, sought tidings of him in every possible way, but in vain. Her heart almost broke sometimes at the separation. She had confidence enough in her power over him, and in her woman's wit, to feel that if she had only another opportunity she might learn the truth, force it from him, constrain him to tell it, because she loved him!

CHAPTER XVII.

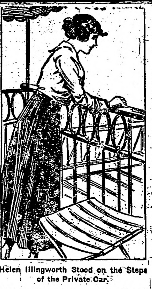
Once More Unto the Work.

The Martlet Bridge company had finally weathered the storm, although it was, of course, not intrusted with the new International bridge which was about to be commenced. When Bertram Meade read of the new undertaking, it cut him to the heart. This time there would be no mistake. In the necessity of recouping its fortunes, the Martlet Bridge company entered upon an even wider career. The directors took contracts which they had hitherto disdained because they were comparatively unimportant, and they bid on operations which they had hitherto left to competitors. They were building the great steel viaduct by the town of Coronado below the dam, and they had already built the splendid steel arch that spanned the ravine, here almost a gorge, in the valley of the Kicking Horse to the eastward of the big mesa.

After Christmas, Colonel Illingworth decided to make another of his tours of inspection, and as Helen was not looking particularly well from the strain under which she was laboring, he offered to take her with him, especially as he was going to the far Southwest where the weather would be mild and pleasant, to inspect the growing viaduct and the completed arch. She gladly availed herself of the permission. There was always a possibility, albeit a most remote one, that she might hear of Meade. That it might be well to invite a representative of The Engineering News, to wit, Rodney, to accompany them, so that the really splendid [illegible] the Martlet company was doing [illegible] be made widely known. The party consisted of the father and daughter, Curtiss, the chief engineer, Doctor Severence, the vice president and financial man, and Rodney.

Now Helen Illingworth had not the least reason in the world to suspect that Bertram Meade was in any way connected with this engineering project, but Rodney had pointed out and had imbued her with his own belief that sooner or later, when Meade was found, he would be found engaged in engineering in some capacity.

"It's in his blood," said Rodney. "He can no more [illegible] away from it than he can stop [illegible]. He can't do anything else. [illegible] where he's at the old job. It might be in America, and it might be out there at Coronado, or it might be in South America, Europe, Asia, or—"



Helen Illingworth Stood on the Steps of the Private Car.

"I wonder if we can't find out all the engineering work that is being done in the world and send representatives to seek him," said Helen Illingworth.

Rodney laughed.

"To hunt that way would be like hunting a needle in a haystack. I cannot bid you hope that he is there; in fact, I think it is most unlikely that he would be any place near where the Martlet people are operating, but there's a chance, even if only the faintest one."

Well, women's hearts can build a great deal on a faint chance. They are **calculated for the forlorn hope. And** so Helen Illingworth stood on the steps of the private car as it rolled across the mile-long temporary bridge at Coronado, and scanned the workmen grouped on one side of the track, their work suspended for a moment that the train might pass on the wooden trestling, in hope that she could see in one of them the man she loved and sought. And Rodney stood by her side, equally interested, searching the crowd with his glance, also.

There was nothing in the town to attract Helen out of the car. She had visited West and Southwest many times. Colonel Illingworth, with Rodney and Severence, there left the train. Miss Illingworth decided to go into the hills and get away from the arid and heated plains. A siding had been built near the steel arch under the slope of the hill from which the huge mesa arose, within two miles of the dam, and the car was to be placed there. The men left behind would use the private car of the division superintendent of the railroad when they had ended their several tasks.

It had been raining dismally during the afternoon, and when the car was detached and switched to the siding and left up in the hills some twenty miles from the town, it was too wet and uncomfortable to leave it. Disregarding the downpour, however, Curtiss, who had come up with it, made a very careful investigation of the completed bridge, which more than surpassed his expectations in its appearance of sturdy grace, as well as in the evidences of careful workmanship in its erection.

That evening the special engine pushed the other private car up from the valley, bringing the people who had inspected the bridge. A few more weeks would complete the great viaduct. Everything was proceeding in the most satisfactory way and Colonel Illingworth was very much elated over the situation.

"Who would have thought," he said as they sat down to dinner in the brightly lighted observation room, "that it would rain in this country at this season of the year?"

"It will probably be over by tomorrow morning," observed Rodney.

"If it continued long enough and rained hard enough, that dam would have to be looked after. We'll go over and see it tomorrow," said the colonel cheerfully.

"What would happen if it gave way?" asked his daughter.

"It would flood the valley, sweep away the town, and—" he paused.

"Well, father?"

"Ruin the bridge."

"We can't afford to have another failure after the International," said Severence.

Now there was a newcomer at the table, a big rancher named Winters, whom Rodney had met in the town and had introduced to Colonel Illingworth. The latter had invited him to dinner and to stay the night in the extra sleeper, and Winters, who had particular reasons for wanting to talk with Rodney and to meet Miss Illingworth, had accepted.

"You can count on its stopping," he said at last. "My ranch is a hundred miles to the north of here. I heard Rodney was with your party, and as he was an old classmate of mine—in fact, my best friend at Harvard along with Bert Meade"—and the mention of the forbidden name caused quick glances to be passed around the table, but raised no comment—"the chance of seeing him brought me down here. I know the weather along this whole section of the country; it's the dryest place on earth, and I would almost offer to swallow all the rain that will fall after this storm spends itself."

"Well, that's [illegible]," said Curtiss, "because I've heard that the dam lacks very [illegible], but that the spillway has been delayed."

"You'll find that the storm has broken in the morning," said Winters confidently.

After dinner Colonel Illingworth, desirous of talking business, called the men of the party, except Rodney and Winters, back into the observation room of the other car, leaving the two men with Helen.

"Mr. Shurtliff," said Helen, as the men stepped out on the platform, the secretary following, since his employer had intimated his services might be needed, "if you can, I wish you would come back here as soon as possible."

"Certainly, Miss Illingworth," said the secretary, "immediately, if your father finds that he does not need me."

"Rod," said Winters when they were alone, "I'd go a long way to see you, but I might as well be frank. I did not come down these hundred miles, leaving my ranch in the dead of winter with all its possibilities of mishap to the cattle, simply to see you, or even Miss Illingworth here, although she is worth it," he went on with the frank bluntness of a western man.

"Of course you didn't," said Rodney, smiling. "I know I'm not a sufficient attraction."

"I came to talk about Meade."

"Mr. Winters," said Helen, clasping her hands over her knees and leaning forward, "if you know anything about him, where he is, what he is doing, how he fares, is he well, does he think of—I beg you to tell me."

"Miss Illingworth, there is nothing I would refuse to tell you if it rested with me."

"I don't mind confessing to you, you are such old friends, you and Mr. Rodney, and so devoted to Bert, that I am worrying—"

"You need say nothing more, Miss Illingworth. I know all about the situation. Rodney wrote me and—"

"Well, then, you understand my anxiety, my reason for asking?"

"I do."

"And you will tell us?"

"I wish to heaven I could."

"Can't you tell us anything?"

"Well, yes, I can."

"What?"

"It may be a breach of confidence."

"I'd take the risk," said the girl, her bosom heaving. Was she at last about to hear from her lover?

"Know where he is, old man?" asked Rodney.

"I think so—not sure, but—"

"Where?"—from the woman, breathlessly.

"I didn't agree to tell you that."

"What then?"

"All I can say is that after the death of his father he turned up at my ranch one day some five months ago and told me his story."

"What!" exclaimed Rodney. "Did he tell you he was innocent?"

"Not at first. He told me he was guilty."

"But you didn't believe him, did you?" asked the woman impulsively.

"I certainly did not."

"Why not?"

"Well, I don't know why. I just didn't, that's all. I know Meade. I know him well. I know his make-up. We get accustomed to sizing up a man's actions out West here, and it didn't take me longer than it took him to tell the story to know that it wasn't true."

"Oh, thank you for that," said the woman.

"But our beliefs are not evidence, Dick," interposed Rodney.

"We can't prove it and that's the point. I told him," continued Winters, "that it was a da—darned lie—I beg your pardon, Miss Illingworth. I mean I told him that it was not true and that he was a fool for sticking to it, and—er—he—admitted—I—er," floundered Winters, suddenly realizing that he was on the eve of a breach of confidence and checking himself just in time. "In fact, the subject was painful to him, and I let him alone, which is what we generally do to a man who doesn't want his affairs inquired into too closely," Winters ended lamely, realizing how near he had come to betraying his friend's confidence and telling of Meade's own admission that he had said what he had to save the fame and honor of the father.

"Well, what next?" asked Rodney, understanding as did Helen Illingworth herself the ranchman's hesitation, and respecting it, although the unavoidable inference gave her great joy.

"He hung around the ranch for a month or six weeks to get his balance. He was pretty badly broken up. I'm a bachelor myself and don't know much about those things, but I can say that he loved you, Miss Illingworth, more than life itself."

"But not more than the reputation of his father," she said with a little tinge of bitterness.

"Well, I take it he looked at that as a matter of honor. You know a man's got to keep his ideals of honor."

"Even at the expense of a woman's heart?" said the girl.

"It sounds hard, but I guess we've got to admit that. But that's neither here nor there," he continued, gliding over the subject, "the point is I found that he had to fight it out himself, and I mainly let him alone. I gave him a horse and gun and turned him loose in the wilds. Best place on earth for a man in his condition, Miss Illingworth. You can go out into the wilderness and get nearer to God there than any place I know of. He came back finally, turned in his gun, borrowed the horse, bade me good-by, and said he was going out to make a new start."

"Where did he go? Which way?"

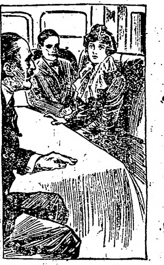
"He was headed south when I saw him last, and all this lay in his way."

"You mean—?" cried the woman.

"He may be here?" said Rodney.

Winters nodded.

"I have thought so. It's only a guess, of course, and probably a poor one. But when I read in the papers that Colonel Illingworth was coming here, and that you were along, and Miss Illingworth, I thought I'd just take a run down here and see what could be done."



"He Wouldn't Be a Common Workman, Would He?" Asked the Girl.

"Oh, I'm so glad you have come."

"He's not working on the bridge," said Rodney.

"How do you know, Rod?"

"I examined all the pay rolls, and none of them bears his name."

"He wouldn't work under his own name in the Martlet Bridge company," said the woman.

"Certainly not. That was only my first step. I went around among the workmen, too, and I got a look at every one of them. I'm sure he's not there."

"He wouldn't be a common workman, would he?" asked the girl, more disappointed than she could express.

"Certainly not. He'd be keeping track of material, or running a transit, or acting as a gang foreman. Most of the workmen are foreigners, although the bridge erectors are Americans."

"You're sure that he's not here?"

"Absolutely."

"There's the dam," said Winters. "We'll try that in the morning."

"What good is it going to do us, Dick?" asked Rodney a little irritably. "Even if we do find him, we can't make him speak."

"I don't know," answered the woman slowly. "But if I could just see him once again, Mr. Rodney"—she spoke without hesitation or reserve, and both men felt deeply for her—"if I could just speak to him, if he would only—"

"I believe you can persuade him," said Winters.

"Yes, perhaps, but I want Shurtliff to speak first, then we can approach our friend himself with more confidence," said Rodney.

TO BE CONTINUED

March and Macaroons.

It may not be generally known that the month of March has a cake dedicated to its honor. Macaroons used to be called March-panes, from the medieval Latin, Martispanes, "bread of March." Some say the cakes were named after Marcus Apicius, the famous epicure; by another authority the cakes were made by the priests of Rome and sacred to the god Mars. The receipt for the making of macaroons is very old.

"Draw" Shots in Golf.

The flights of golf balls and base balls in the air are similar to the trajectories of billiard balls on felt cloth and governed by the same laws. A blow with a brassie on the under side of a golf ball is precisely the same as a draw shot in billiards. The polished ivory needs the rough surface of the felt to produce resistance, and the tenuous air needs the corrugated surface of the golf ball for the same purpose.

Duration of Human Life.

The average duration of human life is about thirty-three years. One-quarter of the people of the earth die before the age of six; one-half before the age of sixteen, and only one of every 100 lives to the age of sixty-five. The average age, however, is slowly increasing, probably owing to better sanitary conditions, and greater medical skill.

SELL BUTTER CARDS; JAILED

Two German Waiters in Berlin Are Sentenced to Three Years in Prison Each.

Berlin.—Because they tried to sell 15,000 butter cards which they had found, Fritz Braceī and Robert Tress, two waiters, have been sentenced to three years in prison each.

A bundle of butter cards fell from a delivery wagon on the way from the printer to the offices of the bread commission of the Thirty-eighth district [illegible] and was picked up by Tress. The waiter, with the aid of his friend Braceī, started to sell the cards. For several days the two men did a rushing business. When they finally were arrested they had over $400 in their pockets and still possessed about 6,000 of the cards. The law makes the sale of food cards a serious crime.

Clean up Order [illegible] by the

Board Of Health,

All residents of the Village of Goodridge are hereby notified to clean up their premises before the 15th day of May, 1917, under pain of incurring the penalty provided by law for neglecting to comply with the ordinance provisions. As a measure for the protection of the public health it is necessary that all winter accumulations be removed before the approach of warm weather. Compliance with this request is [illegible] requested.
Signed, Board of Health,
M. G. Thoresen.

Ditch 39 Knocked Out.

At the final hearing on Ditch 39, held at Bemidji last Thursday, the entire system was put out of commission. A large number for this section of the county went down to Bemidji to oppose the establishment of the ditch They all returned Friday morning feeling well pleased with the result of the hearing.

Goodridge To Help Food Supply.

Goodridge will help a little in raising food stuff for the next winter. The lots on the south side of the main street, reserved, for park purposes, will be broken up and planted into potatoes. Next spring after the ground gets into shape, grass seed will be sown and trees planted around the lots. This is a step in the right direction, as nothing adds to the beauty of a town, more than a good park.

Literary Program.

Tellof Hovet was transacting business in Goodridge, Saturday.

"The Libertine."

That there is a little bad in every good little city is pictured in a new way in "The Libertine," which comes to the Grand theatre May 14th. This superfeature does not lift the lid off the tenderloin for a night merely to show the sordid life there, but it takes one into the homes of the "high and mighty," where wickedness is found hidden under the cloak of respectability.

"The Libertine" is said to be the first photoplay that has dared to invade the mansions of the idle rich in its story of free love, loose living and the eventual wrecked lives of man and maid. Life in these sections of every big city where the morals are thought to be above reproach provides many interesting situations in this unusual screen drama. The picture is heralded as one that will arouse fathers and mothers to a sense responsibility to their children as nothing in film [illegible]

"The Libertine," the most recent of the morality plays, differs from those that have before in that the acting and photography are as fine as in the most costly productions. The cast has not been selected at random, but is composed of some of the best-known players in the country. John Mason, who is called "America's foremost actor," and Miss Alma Hanlon, one of the [illegible] girls in the movies, head the list.

Wherever "The Libertine" has been exhibited it has been acclaimed by the critics as one of the really big attractions of the year

Remember the base ball dance to be given in the Goodridge Hall Saturday evening May 12th.

Ordinance No. 9.

An Ordinance relating to dog licenses in the Village of Goodridge, Minn.

The Village council of the Village of Goodridge, Minnesota do ordain as follows:

SECTION I.

That every person owning, keeping harboring any dog before allowing or suffering such dog to run at large within the corporate limits of the Village of Goodridge shall annually on or before the first day of June cause such dog to be registered, numbered and described in the office of the Village recorder of said Village who shall thereupon issue to such person license, licensing and authorizing such person to keep such dog and every such person so licensed shall pay for such license one Dollar for every male dog and two Dollars for every female dog named in such license.

SECTION II

It shall be the duty of the village recorder to keep a correct list of all dogs registered, numbered and described as provided in section one of this ordinance with their number and description.

SECTION 3.

The recorder shall annually within one week after the first of July deliver to the Village Marshall or Village Constable a correct list of the dogs registered or whose owner or keeper have been licensed to keep same for the current year, and shall from time to time furnish to such Marshall or Constable lists of such dogs as are subsequently registered.

SECTION 4

Nothing in this ordinance contained shall be so construed as autorizing the Village Marshall or his deputies to kill ang dog temporarily within the Village of Goodridge with its owner or keeper and which is not owned, kept or harbored therein.

SECTION 5.

It shall be the duty of the Village Marshall or his deputies immediately on receiving from the recorder such list of all dogs registered, numbered and described as aforesaid to kill or bury or cause to be killed and buried all dogs found at large in said Village contrary to provisions of this ordinance. The owner or keeper of any dog who allows or suffers such dog to run at large without having complied with the provisions of this ordinance on conviction thereof shall be punished by a fine of not less than five Dollars ($5.00) and not more than twenty Dollars ($20.00) one half [illegible] to the complainant. In default of payment of such fine and cost of prosecution such owner and keeper shall be committed to the Village or County jail until such fines are paid or until he is discharged by the President of said Village.

This ordinance shall take effect and be in force from and after its passage.

Passed by the Village council of the Village of Goodridge, Minnesota, this 16th day of April 1917
H. A. Halvorson,
Village President
Carl Christianson.
Village Recorder.

Defective Flues Four Times As Dangerous As Gasoline Says Fire Marshall.

Robert W. Hargadine, State Fire Marshall.

Contrary to the general belief, gasoline is not such a prolific cause of fires as some other reputed less dangerous article.

During the past year in Minnesota there were only 67 fires directly traceable to gasoline and these include two fires from gasoline lamps, five from gasoline torches, 24 from gasoline stoves and 36 from gasoline explosions and the total property loss from these causes amounted to $52,154, says Robert W. Hargadine, state fire marshall.

"Compare with this the number of fires due to defective flues, he says. "This cause resulted in 156 fires and the property loss was $203,197, or about four times as great as the aggregate loss from gasoline fires.

"This explained by the fact that people are awake to the dangerous possibilities in a can of gasoline but these same people hardly ever think of their chimney flues.

"therefore this department urges all people, in the interest of proper fire prevention to watch for possible fire hazards, not in the obvious, but in the apparently innocent and 'perfectly safe' places."

Help To Meet Food Shortage.

At a recent meeting at Crookston of delegates from the Red River Valley counties, measures were adopted to meet the great food shortage in the nation and prevent a greater scarcity as the war progresses. It seems unnecessary to call attention of the farmers to the fact that while this movement is a patriotic one, it is going to be most profitable to them as prices will continue high during the war.

Appeals have been issued to every township in the county to organize, in order of co-operation of farmer with farmer and with the county and district committees may insure an increase of grain, vegetables and stock. Those having seed of any kind to spare ought to notify the township committee or the proper county chairman named below, and those needing seed also should notify the same parties. The buyer and seller can thus be brought together promptly and at no expense. A need of labor this spring or during the season can be cared for similarly. Men will be provided when needed, not only during the spring, but, in haying and harvesting. Financial aid is also made available for seeding and also stock purchases.

The Pennington organization is as follows, and these men will promptly assist anyone needing help in their respective departments:

J. H Hay, Finance and county chairman.

Henry Werner, Stock,

C. W. McDaniel, Seed and crops

Jesse LaBree, Labor.

Rev. R. L. Barackman, Schools and churches.

Mrs. Pratt, Woman's work.

A sacrifice of female stock of any kind at this time, must not be made. Farmers who feel pressed to sell it [illegible] communicate with the county committee in order that this can be avoided. Every producer of food now has an opportunity under the press of the war to serve his country and him[illegible] urged to complete his township organization and get in touch with the county committee, which is able and willing to meet every call made upon it.

Pennington County Committee,
Red River Valley Crop and Public Welfare association.

The Red Lake Drainage Project.

(By H. C. [illegible])

With an apology to the Northern Minn. Development Association the following rhyme, as "[illegible] [illegible]" as the "[illegible]" [illegible] [illegible] himself, is dedicated to all CONSISTENT boosters, past and present, BOOSTERS FOR THE RECLAMATION OF THE SLOUGHS. Reference to page 206 Pearson's Magazine-October 1916 issue may substantiate "pork" comments. Incidentally, "Hats Off" to J. J. Opsahl et al.

There's the Red Lake Drainage Project under way
Surveys made and surveys to be made, we know
Help and boost or you never see the day
When surplus waters through the MAIN CANAL will flow.

A "Barrel of Pork" they try to make us to believe
When crops of states and nations are submerged
Red Rivers of the North you can't deceive;
States of North Star Rainy Regions all concerned

Of a "stream" in Lone Star State we read some time ago
Where millions were expanded on a project very bad;
They [illegible] artesian wells to make the water flow
Now, [illegible] "Barrels of Pork" gone mad?

If you afford to boost for Northern Minnesota
[illegible] for the RECLAMATION [illegible] THE SLOUGHS
Why don't you urge your solons one iota,
[illegible] of the project [illegible] the news?

Come to the Base-ball Dance at the Goodridge Hall Saturday evening, May 12th. Good music will be furnished. Don't miss it

HIGHLANDING NEWS

Mrs A. T. Nelson, Mabel Larson and children and Miss Ella Olson visited with Mrs. Overum Saturday afternoon.

Thomas Hill from Marion, Ind., left Tuesday for Grygla where he will buy land and make his future home.

A. T. Olson was a business caller in Goodridge, Friday.

A Ladies Aid was organized at a meeting held at the home of Mrs. P. P. Korstad Thursday, April 12th.

The following were elected officers:—Mrs. P. P. Korstad, Pres., Mrs. T. Jacobson, Vice Pres., Mrs. B. Overum, Treas., Mrs. S Nelson, Clerk.

Sever Nelson was a business caller in Thief River Falls, Tuesday.

That life is just what we make it is the principal thought in "The Libertine", the big photoplay which has been booked by Manager Palmer of the Grand theatre for presentation in this city May 14th. Matinee at 2:30 p. m.

To drive home its lesson, the author of "The Libertine" laid most of the scenes in the mansions of the idle rich where the lives of this class of folks are "shown up" in amazing fashion.

The photography of "The Libertine" is as fine as that in any of the greatest pictures. The stars are John Mason and Alma Hanlon, two of the most popular players of stage and screen.

When the picture first was shown in New York City, the star paid the production this tribute:

"Every man, woman and child in this great land of ours should see "The Libertine." It leaves a lasting impression — and a commendable one."

PREVENTING RUST AND SMUTS.

(National Crop Improvement Service.)

Barley is comparatively free from diseases and insect enemies. It is, however, affected with rust and smut, but not to the extent that oats are usually affected. Little has been done regarding the prevention of rust, but considerable has been done in the eradication of smuts. Ordinary smut can be handled with the formaldehyde treatment the same as oats, but the loose smut is hard to eradicate unless the modified hot water treatment is used. This is a delicate proposition and should be done carefully. Place the barley in gunny sacks and submerge in cold water from seven to twelve hours. Remove and drain for one hour, then submerge for five minutes in a barrel of hot water, held at a constant temperature of 130 degrees Fahrenheit. The water ought to be thoroughly warmed before putting in the barley because it will cool off the water. Boiling water should be kept near at hand, which can be added at intervals which will keep the temperature nearly constant, but should never be allowed to come into direct contact with the grain as its vitality will be injured or destroyed. Be careful that your thermometer is correct. You ought to get yours tested at the creamery or the cheese factory.

After this treatment the grain should be spread upon the barn floor to cool before sowing. It should be sown the same day or not later than the day after treatment, for if you don't look out it will swell and start to sprout and it will be hard to get it through the seeder.

In the treatment for smut, formaldehyde is the most desirable as it is easiest to handle. Smut is not so very bad in barley this year, which is fortunate because if you wish to make a profit on a crop you can put it in after all other crops are planted, except corn and potatoes.

LOCAL LEADERSHIP

Somebody Must Take the Initiative—Are You Willing to Serve?

(National Crop Improvement Service.)

Many agricultural plans are like a sky rocket. They make a fuss going up and blow up a few stars and descend like the stick. The reason of this is because few men can make a continued effort. They will get up a little scheme but at the first discouragement, their energy wanes and there is nothing to show for their activity.

Yet it cannot be said that this sort of energy is wasted. Like the overlapping waves of a tide, public opinion is being formed. Things which were ignored when crop-improvement began its propaganda, are now adopted as a matter of course.

Local leadership is the weakest spot in this work. Somebody must take the initiative but it is not necessary that one man should undertake the whole thing. In every community there are bankers, commercial clubs, farmers clubs, granges, institutes, millers, grain dealers and public leaders of various kinds who can unite their efforts on a few specific things and after [illegible] [illegible] problem be [illegible] strengthened [illegible] others.

For Rent.

The Bernt Johnson quarter, the [illegible] of Section 34, Township of Highlanding. About 130 acres under cultivation.

Also other farms for rent,
Inquire at Goodridge State Bank

Clean up Order Issued by the

Board Of Health,

All residents of the Village of Goodridge are hereby notified to clean up their premises before the 15th day of May, 1917, under pain of incuring the penalty provided by law for neglecting to comply with the ordinance provisions. As a measure for the protection of the public health it is necessary that all winter accumulations be removed before the approach of warm weather. Compliance with this request is greatly requested.

Signed, Board of Health,
M. G. Thoreson

Ditch 39 Knocked Out.

At the final hearing on Ditch 39, held at Bemidji last Thursday, the entire system was put out of commission. A large number for this section of the county went down to Bemidji to oppose the establishment of the ditch. They all returned Friday morning feeling well pleased with the result of the hearing.

Goodridge To Help Food Supply.

Goodridge will help a little in raising food stuff for the next winter. The lots on the south side of the main street, reserved, for park purposes, will be broken up and planted into potatoes. Next spring after the ground gets into shape, grass seed will be sown and trees planted around the lots. This is a step in the right direction, as nothing adds to the beauty of a town, more than a good park.

Literary Program.

The next meeting of the Literary Society will be held in the schoolhouse Thursday, May 10th. The following is the program for the evening.

Mr. and Mrs. Knut Danielson visited at Tellof Hovet's, Sunday.

Sakarias Hoie made a flying trip to Goodridge one day last week.

Mr. and Mrs. Ole Tharaldson were business callers in Goodridge, Saturday.

Mrs. Knute Roysland visited at the Svare home Sunday.

Gilmour Tharaldson and John. Hovet left Saturday for North Dakota where they will work for some time.

Gunder Danielson from McIntosh is visiting his son Knute this week.

Tellof Hovet was transacting business in Goodridge, Saturday.

"The Libertine."

That there is a little bad in every good little city is pictured in a new way in "The Libertine," which comes to the Grand theatre May 14th. This superfeature does not lift the lid off the tenderlion for a night merely to show the sordid life there, but it takes one into the homes of the "high and mighty," where wickedness is found hidden under the cloak of respectability.

"The Libertine" is said to be the first photoplay that has dared to invade the mansions of the idle rich. It's story of free love, loose living and the eventual wrecked lives of man and maid. Life in those sections of every big city where the morals are thought to be above reproach provides many interesting situations in this unusual screen drama. The picture is heralded as one that will arouse fathers and mothers to a sense responsibility to their children as nothing in film can ever has.

"The Libertine," the most recent of the morality plays, differs from those that have before in that the acting and photography are as fine as in the most costly productions. The cast has not been selected at random, but is composed of some of the best-known players in the country. John Mason, who is called "America's foremost actor," and Miss Alma Hanlon, one of the prettiest girls in the movies, head the list.

Where ever "The Libertine" has been exhibited it has been acclaimed by the critics as one of the really big productions of the year

Remember the base ball dance to be given in the Goodridge Hall Saturday evening May 12th.

Ordinance No. 9.

An Ordinance relating to dog licenses in the Village of Goodridge, Minn.

The Village council of the Village of Goodridge, Minnesota do ordain as follows:

SECTION I.

That every person owning, keeping, harboring any dog before allowing or suffering such dog to run at large within the corporate limits of the Village of Goodridge shall annually on or before the first day of June cause such dog to be registered, numbered and described in the office of the Village recorder of said Village who shall thereupon issue to such person a license, licensing and authorizing such person to keep such dog and every such person so licensed shall pay for such license one Dollar for every male dog and two Dollars for every female dog named in such license.

SECTION II.

It shall be the duty of the village recorder to keep a correct list of all dogs registered, numbered and described as provided in section one of this ordinance with their number and description.

SECTION 3.

The recorder shall annually within one week after the first of July deliver to the Village Marshall or Village Constable a correct list of the dogs registered or whose owner or keeper have been licensed to keep same for the current year, and shall from time to time furnish to such Marshall or Constable lists of such dogs as are subsequently registered.

SECTION 4.

Nothing in this ordinance contained shall be so construed as autorizing the Village Marshall or his deputies to kill ang dog temporarily within the Village of Goodridge with its owner or keeper and which is not owned, kept or harbored therein.

SECTION 5.

It shall be the duty of the Village Marshall or his deputies immediately on receiving from the recorder such list of all dogs registered, numbered and described as aforesaid to kill and bury or cause to be killed and buried all dogs found at large in said Village contrary to provisions of this ordinance. The owner or keeper of any dog who allows or suffers such dog to run at large without having complied with the provisions of this ordinance on conviction thereof shall be punished by a fine of not less than five Dollars, ($5.00) and not more than twenty Dollars ($20.00) one half to go to the complainant. In default of payment of such fine and cost of persecution said owner and keeper shall be committed to the Village or County jail until such fines are paid or until he is discharged by the President of said Village.

This ordinance shall take effect and be in force from and after its passage.

Passed by the Village council of the Village of Goodridge, Minnesota, the 16th day of April 1917

H. A. Halvorson,
Village President.

Carl Christianson,
Village Recorder.

Defective Flues Four Times As Dangerous As Gasoline Says Fire Marshall.

Robert W. Hargadine, State Fire Marshall.

Contrary to the general belief, gasoline is not such a prolific cause of fires as some other reputed less dangerous article.

During the past year in Minnesota there were only 67 fires directly traceable to gasoline and these include two fires from gasoline lamps, five from gasoline torches, 24 from gasoline stoves and 36 from gasoline explosions and the total property loss from these causes amounted to $52,254, says Robert W. Hargadine, state fire marshall.

"Compare with this the number of fires due to defective flues, he says. "This cause resulted in 196 fires, and the property loss was $209,197, or about four times as great as the aggregate loss from gasoline fires.

"This explained by the fact that people are awake to the dangerous possibilities in a can of gasoline but these same people hardly ever think of their chimney flues.

"therefore this department urges all people, in the interest of proper fire prevention to watch for possible fire hazards, not in the obvious, but in the apparently innocent and perfectly safe.

Help To Meet Food Shortage.

At a recent meeting at Crookston of delegates from the Red River Valley counties, measures were adopted to meet the great food shortage in the nation and prevent a greater scarcity as the war progresses. It seems unnecessary to call attention of the farmers to the fact that while this movement is a patriotic one, it is going to be most profitable to them as prices will continue high during the war.

Appeals have been issued to every township in the county to organize, in order of co-operation of farmer with farmer and with the county and district committees may insure an increase of grain, vegetables and stock. Those having seed of any kind to spare ought to notify the township committee or the proper county chairman named below, and those needing seed also should notify the same parties. The buyer and seller can thus be brought together promptly and at no expense. A need of labor this spring or during the season can be cared for similarly. Men will be provided when needed, not only during the spring, but, in haying and harvesting. Financial aid is also made available for seeding and also stock purchases.

The Pennington organization is as follows, and these men will promptly assist anyone needing help in their respective departments:

J. H. Hay, Finance and county chairman,

Henry Werner, Stock,

C. W. McDaniel, Seed and crops

Jesse LaBree, Labor.

Rev. R. L. Barackman, Schools and churches.

Mrs. Pratt, Woman's work.

A sacrifice of female stock of any kind at this time, must not be made. Farmers who feel pressed to sell it ought to communicate with the county committee in order that this can be avoided. Every producer of food now has an opportunity under the press of the war to serve his country and himself. [illegible] urged to complete his township organization and get in touch with the county committee, which is able and willing to meet every call made upon it.

Pennington County Committee,
Red River Valley Crop and Public Welfare association.

The Red Lake Drainage Project.

(By H. C. Iverson)

With an apology to the Northern Minn. Development Association, following Rhyme, as "crude" as "fresh" as the "native" would-a-ther himself, is dedicated to all CONSISTENT boosters, past and present, BOOSTERS FOR THE RECLAMATION OF THE SLOUGHS. Reference to page 196 Pearson's Magazine-October 1916 issue may substantiate "pork" comments: Incidentally, "Hats Off" to J. J. Opsahl et.al.

There's the Red Lake Drainage Project under way
Surveys made and surveys to be made, we know
Help and boost or you never see the day
When surplus waters throurh the MAIN CANAL will flow.

A "Barrel of Pork" they try to make us to believe
When crops of states and nations are submerged
Red Rivers of the North you can't deceive;

HIGHLANDING NEWS

Mrs A. T. Nelson, Mabel Larson and children and Miss Ella Olson visited with Mrs. Overum Saturday afternoon.

Thomas Hill from Marion, Ind., left Tuesday for Grygla where he will buy land and make his future home.

A. T. Olson was a business caller in Goodridge, Friday.

A Ladies Aid was organized at a meeting held at the home of Mrs. P. P. Korstad Thursday, April 12th.

The following were elected officers—Mrs. P. P. Korstad, Pres., Mrs. T. Jacobson, Vice Pres., Mrs. B. Overum, Treas., Mrs. S. Nelson, Clerk.

Sever Nelson was a business caller in Thief River Falls, Tuesday.

That life is just what we make it is the principal thought in "The Libertine", the big photoplay which has been booked by Manager Palmer of the Grand theatre for presentation in this city May 14th, Matinee at 2:30 p. m.

To send home it's lesson, the author of "The Libertine" laid most of the scenes in the mansions of the idle rich where the lives of this class of folks are "shown up" in amazing fashion.

The photography of "The Libertine" is as fine as that in any of the greatest pictures. The stars are John Mason and Alma Hanlon, two of the most popular players of stage and screen.

When the picture first was shown in New York City, the star paid the production this tribute:-

"Every man, woman and child in this great land of ours should see "The Libertine." It leaves a lasting impression — and a commendable one."

PREVENTING RUST AND SMUTS.

[National Crop Improvement Service.]

Barley is comparatively free from diseases and insect enemies. It is, however, affected with rust and smut, but not to the extent that oats are usually affected. Little has been done regarding [illegible] but considerable has been done in the eradication of smuts. Ordinary smut can be handled with the formaldehyde treatment the same as oats, but the loose smut is hard to eradicate unless the modified hot water treatment is used. This is a delicate proposition and should be done carefully. Place the barley in gunny sacks and submerge in cold water from seven to twelve hours. Remove and drain for one hour, then submerge for five minutes in a barrel of hot water, held at a constant temperature of 130 degrees Fahrenheit. The water ought to be thoroughly warmed before putting in the barley because it will cool off the water. Boiling water should be kept near at hand, which can be added at intervals which will keep the temperature nearly constant, but should never be allowed to come into direct contact with the grain as its vitality will be injured or destroyed. Be careful that your thermometer is correct. You ought to get yours tested at the creamery or the cheese factory.

After this treatment the grain should be spread upon the barn floor to cool before sowing. It should be sown the same day or not later than the day after treatment, for if you don't look out it will swell and start to sprout and it will be hard to get it through the seeder.

In the treatment for smut, formaldehyde is the most desirable as it is easiest to handle. Smut is not so very bad in barley this year, which is fortunate because if you wish to make a profit on a crop you can put it in after all other crops are planted, except corn and potatoes.

LOCAL LEADERSHIP

Somebody Must Take the Initiative—Are You Willing to Serve?

[National Crop Improvement Service.]

Many agricultural plans are like a sky rocket. They make a fuss going up and blow up a few stars and descend like the stick. The reason of this is because few men can make a continued effort. They will get up a little scheme but at the first discouragement, their energy wanes and there is nothing to show for their activity.

Yet it cannot be said that this sort of energy is wasted. Like the overlapping waves of a tide, public opinion is being formed. Things which were ignored when crop improvement began its propaganda, are now adopted as a matter of course.

Local leadership is the weakest spot in this work. Somebody must take the initiative but it is not necessary that one man should undertake the whole thing. In every community there are bankers, commercial clubs, farmers clubs, granges, institutes, millers, grain dealers and public leaders of various kinds who can unite their efforts on a few specific things and after successfully tackling the problem be strengthened to [illegible] others.

INTENTIONAL DUPLICATE EXPOSURE

Origin of Billiards.

Many men believe that billiards was not an invention, says the Providence Journal, but a growth, while others maintain, most likely because of the name, that it was a French invention, and they contend that it was played by the Germans, Dutch, Italians and French long before it appeared in England. But on this matter, says the New York Sun, there is room for doubt. A number of literary references to the game may be found in Elizabethan days.

Where Cranks Abound.

If ever you want to hear nonsense talked you should go to a conference. I don't care in what department of human life or thought, whenever you get a conference cranks are always to the front. Newspapers will not print their views, so that when they have a conference at their mercy and can insist on being listened to, then is the happy time of the crank.—Sir Edward Clarke.

Where Your Breakfast Comes From.

Brazil, using only a small fraction of the land adapted to coffee cultivation, produces three-fourths of the world's coffee supply—over a billion and a half pounds yearly. Enough sugar is produced in one province of Argentina to sweeten this giant coffee cup. The province of Tucuman yields nearly 5,000,000 pounds of sugar a year.—World Outlook.

Real Fortunate.

Willis—Did you ever read the story of the sword of Damocles? Just think of a man sitting through a whole meal with a sword above him suspended by a single hair." Gillis—"Bah! He isn't in it with the woman who can dance serenely all evening with her whole wardrobe depending on a dinky little shoulder strap."

How to Protect Floor.

When your kitchen floor has been varnished or painted, you may use your stove and sink just the same by taking two wide boards and nailing one large size cork on each end and two in the center. When the floor is dry and the boards are taken up, there will only be the places where the corks rested to touch up.

Buying at Home.

A surgeon in a Western town, engaged to perform an operation of minor character upon a somewhat unsophisticated patient, asked him if he were willing to have only a local anesthetic. "Sure," replied the other, "I believe in patronizing home industry whenever you can."

Fate of Early Poisoners.

In medieval times in Europe poisoners, when detected, were usually broken alive upon the wheel, after having first been given a taste of the rack while in prison awaiting execution, as a sort of gentle reminder of what they had presently got to go through.

Musk Loses Weight.

Charles Bazzoni, a French chemist, demonstrates that a grain of musk loses weight until it ceases to give off its odor, after which its weight remains the same. This proves that perfume is caused by volatile particles given off by the odoriferous body.

Put Stick in Knot.

When tying a knot in rope which must stand much strain, put a stick of soft wood in the knot for it to close on. When you want to untie the knot break the stick and pull out both ends. Your knot can be easily untied.—Farm and Fireside.

Thoughts.

Thoughts are springs of action. The secret of the highest human blessedness is found in the mastery of one's thought habits. As compared with such an achievement, gold is but dross, diamonds but rubbish.

Spiritual Mongrels.

The religions in Russia are almost as diversified as the races. In European Russia the Greek church rules. In Asiatic Russia there are Mahommedans, Buddhists, Jews and Christians.

Unique Popularity.

"A man dat minds his own business," said Uncle Eben, "is so unusual dat he's liable to find mo' people buttin' in on him dan a regular mixer."—Washington Star.

Telling the Truth.

To tell truth, rightly understood, is not to state the true facts, but to convey a true impression; truth in spirit, not truth to letter is the true veracity. —Stevenson.

Great Possibility.

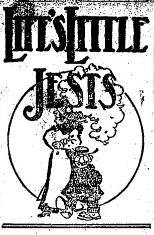
Small Johnnie (watching the passing of a brass band)—"Say, pop, if it was to rain, them tuba players could catch a barrel of rain water, couldn't they?"

A Wise Teller.

It is a wise paying teller who checks a fellow's cash before he cashes his check.

Hand-Shaking Custom Old.

The custom of handshaking dates back to Henry II of England.



His Weak Spot.

"It's a hard matter to see some of these money kings."

"That depends on whether they have hobbies or not."

"How so?"

"Six ordinary millionaires were waiting to have an audience with a financier of that sort the other day when a fellow wearing a sweater, who had a couple of prize bulldogs for sale, got by the whole crowd and spent half an hour in the august presence."

Quite Another Story.

Stern Parent—No, daughter, I can never consent to your marriage with a man who gambles like young Sniffkins does.

Pretty Daughter—But, papa, he says he will return every dollar he ever won from you on our wedding day.

Stern Parent—Well, why didn't you say so in the first place? The sooner you marry him, my dear, the better.

Business Proposition.

The foreign nobleman entered the old man's private office.

"Mr. Millyuns," he began, "I love your daughter, and have come this morning to ask you for her hand in marriage."

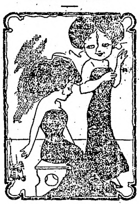
"Hem!" exclaimed the old man, musingly, "what are your lowest terms?"

No More Drawing Done.

"According to Pope," remarked the literary boarder, "beauty draws us with a single hair."

"Perhaps it did in Pope's day," growled the fussy bachelor, "but it's different now. When a beauty reaches the stage where she has only one hair left to draw to, she doesn't draw much."

LOOKING AHEAD



"I hear your marriage to Jack is indefinitely postponed."

"Yes. He says it may be a week, and it may be a year before we marry. You see, he married another girl.

Soothing a Suffragist.

Hush, little woman,
Dont' you cry;
You'll get the ballot
By and by.

Radical Remedy.

"At last," exclaimed the medical student, "I have discovered a sure cure for corns."

"Put me wise," said his friend.

"Have your feet amputated," replied the embryo M. D., with a ghoulish chuckle.

Matter of Years.

Editor—And you say this joke is original with you?

Humorist—Certainly.

Editor—Well, you don't look it.

Humorist—Don't look what?

Editor—To be four hundred years old.

As Others See Us.

Greene—I wonder how old Grindem managed to acquire so much money?

Browne—Don't know. But there's one thing certain—the price he paid for a clear conscience didn't keep him poor.

Concentrating Now.

"The salesman from whom I bought my car said it would make me forget my troubles."

"Did his prediction come true?"

"To a certain extent. It has made me forget all my other troubles."

Hypercritical.

"Some of these motion picture censors are hard to please."

"Indeed they are. I'm beginning to think there is precious little love making nowadays that would pass the average board of censors."

His Experience.

The Bachelor—A woman has to marry a man before she finds him out.

The Widow—Yes; and then she finds him out nearly every night.

TREAT SEED POTATOES

The Prevalence of Scab on the High-Priced Seed Potatoes This Year Makes It Imperative That They Be Treated With Chemicals Before Planting.

[National Crop Improvement Service.]

While the operation of treating is comparatively simply, close attention must be given to the direction and details followed absolutely. Your carelessness may mean ruin of the potatoes or danger to children or stock. Simply—Be Careful.

According to your conditions and equipment, the seed potatoes may be treated in crates, loose in barrels or in sacks. Treatment must be done before the potatoes are cut or sprouted.

The commonest method is to mix one pint of formaldehyde (be sure it is full strength) with thirty gallons of water. Soak the seed stock in this solution for two hours, just before you are ready to start cutting. This solution may be re-used two or three times, if no time is lost between batches. One of the easiest ways is to place the solution in a barrel and place a sackful of potatoes in it at a time.

Corrosive sublimate is an excellent chemical to use, and will kill rhizoctonia as well as scab, but it is a deadly poison and must be kept where children or stock will not get it. All vessels used with this material should be carefully cleaned afterwards. If you prefer this, use four ounces of corrosive sublimate to thirty gallons of water, and soak the potatoes for an hour and a half. The powdered chemical should first be dissolved in hot water and then added to the main solution. Do not use metal vessels. After treating, the potatoes should be promptly washed in clean water until all traces of the solution are gone, and they they should be carefully dried, the sooner the better.

It only takes a little time and very little money to treat all your seed potatoes by either method, and it pays big in larger yields of better potatoes, free from disease.

Profit in First-Class Seed Corn.

[National Crop Improvement Service.]

I have been able to raise 30 bushels of choice seed corn on an acre seed plot. For this seed I received an average of $3.50 per bushel, which makes a return of $105 for this seed alone, in addition to 40 or 50-odd bushels left for feeding purposes.

I have black loam soil that has always been in the highest state of fertility. I apply a heavy coat of stable manure in the fall, plow the field early in the spring, disk four times and harrow until a firm seed bed is obtained. For seed, I used eighteen of the choicest, highest testing seed ears which I could secure.

On May 21st I planted, checking corn into hills forty-two inches each way. At this time I drilled in 450 pounds per acre of a high-grade fertilizer. The corn was given the very best of care, and as a result of this intensive cultivation and the balanced plant-food ration, it matured by the 15th of September, at which time I picked the seed corn and put it on drying racks in a heated drying house so as to be in first-classed condition for buyers.—Heiron J. Black, Burlington, Wis.

PROPER SEEDS

There Is Still a Fair Supply Quickly Available.

[National Crop Improvement Service.]

A great many of our farmers will not plant their full acreage this year on account of a supposed shortage of seeds. We are informed by the wholesale seedsman in the country and the various experiment stations in the states, that there is still a moderate supply of pedigreed barley and certain kinds of corn on hand for quick shipment.

Potato is going to be the hardest seed to obtain. However, in most instances, potatoes can go in last. The advantage of a state Potato Growers' Association was never more apparent than now.

OUR PLATFORM.

[National Crop Improvement Service.]

The four fundamentals following are being taught where grain is a factor:

First.—Establishment of one variety of each kind of seed best adapted to soil and climate.

Second.—The fanning and grading to obtain a uniform seed, free from trash, immature grain and weed seeds.

Third.—treatment of grain diseases by use of formaldehyde, etc.

Fourth.—Testing for vitality of all seeds with the assistance of the school children of the community.

WHISKERS ON BARLEY.

[National Crop Improvement Service.]

Considerable complaint has been made in the past on account of the obnoxious character of the beards on barley during harvesting and subsequent handling. This objection has been largely removed since the introduction of the binder, self feeder attachments to threshing machines and self straw stackers. There is little danger in using the straw for feeding or bedding for stock.

FARMING COMMUNITY QUESTION.

[National Crop Improvement Service.]

Far be it from us to urge the farmers to do anything more than they are already doing, but in case any of our farmers are prevented from planting their maximum acreage through the lack of money, labor, power or seeds, it is a public question and we ought to help them solve it immediately.

[illegible]

Many men believe that billiards was not an invention, says the Providence Journal, but a growth, while others maintain, most likely because of the name, that it was a French invention, and they contend that it was played by the Germans, Dutch, Italians and French long before it appeared in England. But on this matter, says the New York Sun, there is room for doubt. A number of literary references to the game may be found in Elizabethan days.

Where Cranks Abound.

If ever you want to hear nonsense talked you should go to a conference. I don't care in what department of human life or thought, whenever you get a conference cranks are always to the front. Newspapers will not print their views, so that when they have a conference at their mercy and can insist on being listened to, then is the happy time of the crank.—Sir Edward Clarke.

Where Your Breakfast Comes From.

Brazil, using only a small fraction of the land adapted to coffee cultivation, produces three-fourths of the world's coffee supply—over a billion and a half pounds yearly. Enough sugar is produced in one province of Argentina to sweeten this giant coffee cup. The province of Tucuman yields nearly 5,000,000 pounds of sugar a year.—World Outlook.

Real Fortunate.

Willis—Did you ever read the story of the sword of Damocles? Just think of a man sitting through a whole meal with a sword above him suspended by a single hair." Gillis—"Bah! He isn't in it with the woman who can dance serenely all evening with her whole wardrobe depending on a dinky little shoulder strap."

How to Protect Floor.

When your kitchen floor has been varnished or painted, you may use your stove and sink just the same by taking two wide boards and nailing one large size cork on each end and two in the center. When the floor is dry and the boards are taken up, there will only be the places where the corks rested to touch up.

Buying at Home.

A surgeon in a Western town, engaged to perform an operation of minor character upon a somewhat unsophisticated patient, asked him if he were willing to have only a local anesthetic. "Sure," replied the other, "I believe in patronizing home industry whenever you can."

Fate of Early Poisoners.

In medieval times in Europe poisoners, when detected, were usually broken alive upon the wheel, after having first been given a taste of the rack while in prison awaiting execution, as a sort of gentle reminder of what they had presently got to go through.

Musk Loses Weight.

Charles Bazzoni, a French chemist, demonstrates that a grain of musk loses weight until it ceases to give off its odor, after which its weight remains the same. This proves that perfume is caused by volatile particles given off by the odoriferous body.

Put Stick in Knot.

When tying a knot in rope which must stand much strain, put a stick of soft wood in the knot for it to close on. When you want to untie the knot break the stick and pull out both ends. Your knot can be easily untied.—Farm and Fireside.

Thoughts.

Thoughts are springs of action. The secret of the highest human blessedness is found in the mastery of one's thought habits. As compared with such an achievement, gold is but dross, diamonds but rubbish.

Spiritual Mongrels.

The religions in Russia are almost as diversified as the races. In European Russia the Greek church rules. In Asiatic Russia there are Mahommedans, Buddhists, Jews and Christians.

Unique Popularity.

"A man dat minds his own business," said Uncle Eben, "is so unusual dat he's liable to find mo' people buttin' in on him dan a regular mixer."—Washington Star.

Telling the Truth.

To tell truth, rightly understood, is not to state the true facts, but to convey a true impression; truth in spirit, not truth to letter is the true veracity. —Stevenson.

Great Possibility.

Small Johnnie (watching the passing of a brass band)—"Say, pop, if it was to rain, them tuba players could catch a barrel of rain water, couldn't they?"

A Wise Teller.

It is a wise paying teller who checks a fellow's cash before he cashes his check.

Hand-Shaking Custom Old.

The custom of handshaking dates back to Henry II of England.

LIFE'S LITTLE JESTS

His Weak Spot.

"It's a hard matter to see some of these money kings."

"That depends on whether they have hobbies or not."

"How so?"

"Six ordinary millionaires were waiting to have an audience with a financier of that sort the other day when a fellow wearing a sweater, who had a couple of prize bulldogs for sale, got by the whole crowd and spent half an hour in the august presence."

Quite Another Story.

Stern Parent—No, daughter, I can never consent to your marriage with a man who gambles like young Sniffkins does.

Pretty Daughter—But, papa, he says he will return every dollar he ever won from you on our wedding day.

Stern Parent—Well, why didn't you say so in the first place? The sooner you marry him, my dear, the better.

Business Proposition.

The foreign nobleman entered the old man's private office.

"Mr. Millyuns," he began, "I love your daughter, and have come this morning to ask you for her hand in marriage."

"Hem!" exclaimed the old man, musingly, "what are your lowest terms?"

No More Drawing Done.

"According to Pope," remarked the literary boarder, "beauty draws us with a single hair."

"Perhaps it did in Pope's day," growled the fussy bachelor, "but it's different now. When a beauty reaches the stage where she has only one hair left to draw to, she doesn't draw much."

MOBILIZI G THE NATION'S BUY-AT-HOME PROMOTERS

James Eaton Tower, Domestic Science Expert, Analyzes Mail Order Advertising and the Magazine Move Against It.

At the very lowest estimate the retail trade of the United States amounts to $10.000,000,000 a year.

This trade is shared roughly by two groups of distributors. On the one hand we have the large department stores of the big cities of 100.000 or over and the big mail order houses, located in but two or three of the very largest cities.

On the other hand, we have the wholesalers and jobbers, the retail stores of the smaller cities and towns, and the general stores in the sparsely populated regions. With this group we must place the trade papers and house organs, representing the interests of manufacturers and jobbers, and the great national magazines of general circulation, whose interests also lie on the side of distributors of branded and advertisable products.

The annual retail business of this country is $10.000.000.000 a year.

But it is the country and small town merchant rather than the city retailer who suffers most from mail order competition. The New York Times Analyst of March 3, 1913, estimated the number of country stores at 500,000, with a total business amounting to $2,500,000,000. It will therefore be seen that the mail order business, competing mostly with this class and amounting to $500,000,000 a year, amounts to 20 per cent of the total rural trade of the country.

The fight between the retail merchant and the mail order man is historic. For years local merchants' associations, boards of trade and similar bodies have been striving to promote the "buy at home" idea.

But if the recent startling news which comes from New York means anything it means that these hundreds of thousands of "buy at home" boosters, scattered throughout the land, have won a new and powerful champion, whose co-operation means leadership, force and direction for the "buy at home" movement everywhere.

The Butterick company of New York, with an output of 150,000,000 periodicals a year, has definitely allied itself with the local merchant as against the mail order man.

From one printing plant there go to the women of the United States every month no less than 1,500,000 magazines. Among these are the Delineator, the Designer and the Woman's Magazine. At one fell swoop, beginning with their April issues, these magazines banished from their columns all mail order advertising. The sacrifice in revenue, it is understood, amounts to hundreds of thousands of dollars annually.

The verdict as to whether for them this was a piece of "good business" or merely a costly concession to sentiment rests with the nation's retail merchants.

Without wishing to pose as a prophet, it is my personal belief that this step on the part of these magazines is so significant, so vital to the retail merchants of America, that they will inevitably fall in line behind these leaders of the host and accord them such substantial and sustained support as to prove their recent stand to have been not only a courageous innovation, but a piece of "good business."

Local Grocery Cheaper Than M. O.

The Dry Goods Reporter, published in Chicago, calls attention to a Wisconsin grocery store that advertised in the local newspapers a list of seventy-three articles, giving mail order house prices and its own. In every case the store was as low or lower than the mail order house. The grocer made an offer of a saving of 25 per cent over the mail order price to any customer who would place a twenty-five dollar order with him.

Saves $3 Buying at Home.

Professor Paul H. Nystrom placed an order with a local merchant in Madison, Wis., amounting to nearly $50, in the provision line. The total cost to him amounted to $3 less than mail order house prices before considering the freight at all. The total saving, including the freight charges, amounted to not less than $6.50 on a $50 purchase.

82 Per Cent Profit For M. O. House.

The largest mail order house in Chicago sells for $1.21 a fountain pen which can be obtained from the manufacturers in New York for $8 per gross, or 66 2-3 cents each. At this cost the pens net the house 82 per cent profit. The usual profit on fountain pens sold directly to retailers by manufacturers is 66 2-3 per cent on the cost.

Stores Beat Mail Order Prices.

In the course of a comparative investigation of mail order houses and retail stores G. A. Charles, president of the National Home Trade league, [illegible] purchased more than 1,200 articles from mail order houses and in each case proved that he could have bought them as cheaply or for less in his local stores.

SYNOPSIS.

CHAPTER I—Bertram Meade is consulting engineer representing his father, the great Meade, who is the designer of the International bridge, the greatest cantilever structure the world has ever heard of. In the shadow of the uncompleted bridge young Meade receives Colonel Illingworth, president of the Martlet Bridge company, the constructors, and the colonel's daughter, Helen, whom he loves.

CHAPTER II—At dinner the possible weakness of the compression members of the bridge is talked of and Meade defends his father's calculations.

CHAPTER III—Meade and Helen go out upon the bridge in the moonlight and Helen narrowly escapes a fall to the river below. Meade tells his love and they go to the colonel, who approves their marriage when the bridge is finished.

CHAPTER IV—Abbott, the construction engineer, tells Meade there is a deflection in member C-10-R, but makes light of it. Meade, after vainly trying to stop the work, wires his father and follows the telegram to New York.

CHAPTER V—At the great engineer's office father and son try to prevent disaster, but young Meade only reaches Colonel Illingworth as a message comes that the bridge, with 150 men, is in the river.

CHAPTER VI—Abbott goes on with the work, ignoring Meade's protests, but while uneasily inspecting C-10-R the lacings snap under his eyes and he goes into eternity with the other men on the falling bridge.

CHAPTER VII—Young Meade has pointed out to his father the possible weakness, but his objections have been overruled. His father now prepares a statement showing his own fault and sends his secretary, Shurtliff, to the Gazette with it.

CHAPTER VIII—Young Meade, on his return, meets Rodney, an old college friend, and other reporters at the door of his father's office. He finds his father dead from heart failure. He assumes entire responsibility for the catastrophe. Shurtliff, who has not obeyed orders, but concealed the papers the dead man had given him to make public, also accuses the younger Meade.

CHAPTER IX—In her father's presence and over her protest Meade breaks his engagement with Helen.

CHAPTER X—Out West, at a big irrigation dam under construction, Meade begins life over again as a rodman under an assumed name.

CHAPTER XI—Meade has gone to the ranch of Winters, a college friend, and there takes stock of himself and the terrible responsibility he has assumed to save his father's name from dishonor. He makes the new start as an unknown.

CHAPTER XII—Helen and Rodney conspire to save Meade from his own false confession in spite of himself. Shurtliff has been employed by the colonel and Helen, thinking he knows the truth, sets out to win his confidence.

CHAPTER XIII—Meade gains the confidence of Vandeventer, his chief, though he refuses to tell his own story. He is promoted.

CHAPTER XIV — Unexpected rains threaten the dam before the spillway is in shape to carry off surplus water.

CHAPTER XV—Continued rains force Vandeventer and his men into an almost superhuman fight to prevent the flood waters from carrying away the dam. Disaster is imminent though every emergency means known to engineering skill is used.

CHAPTER XVI—Helen gains Shurtliff's confidence but is unable to get any admission from him. Meade has dropped out of sight and the only remembrance she has of him is the flowers that come to her daily from a sender unnamed.

CHAPTER XVII—A viaduct and bridge, just built by the colonel's company, are in the flood's path if the dam breaks. The colonel with Helen and Rodney, and other officials of the company, are there on a visit of inspection.

CHAPTER XVIII—An attempt to force a confession from Shurtliff is unsuccessful.

CHAPTER XVIII.

Brute Force or Finesse.

"What do you want me to say, Mr. Rodney?" asked Shurtliff, coming through the door, having caught Rodney's use of his name.

"Oh, Shurtliff—" began Rodney, somewhat embarrassed at having been overheard.

"What do you want me to speak about?" continued the old man suspiciously, not giving the younger man time to finish. "And what friend can you then approach, sir?"

"I'll tell you what I want," said Rodney.

He quickly came to a decision. Standing up and facing the old man, he staked everything on one bold throw. Grasping the situation, Helen Illingworth held her breath. Winters moved to take his own part in the game at the proper time.

"What is it, sir?" asked the secretary.

"Shut the door and come in," was the answer.

Rodney spoke sharply, and it was a sort of indication, characteristic of the difference in station between an independent young man and a subservient old man.

"Here I am, sir," answered Shurtliff, closing the door and standing before it.

He shot a quick glance at the young woman. He observed her tense position. He saw the emotions that filled her soul in her face and bearing. All his old suspicions rose like a flood. For a moment he no longer cared for her. He almost hated her. He looked from her to the dark-faced, determined Rodney, to big, powerful, quiet Winters. Was this a trap? Were they going to try to force him to speak? He was a brave man, old Shurtliff, but his heart beat a little faster as he faced them. He was quite master of himself, [illegible] cool, watchful, determined; in their eyes rather admirable than [illegible]

"The time has come for you to tell us the truth," began Rodney emphatically. "You know that the whole blame and responsibility for the failure of the International bridge is loaded on the wrong man. You know that you permitted, and even made possible, the sacrifice of the reputation of the son for the sake of the fame of the father. You know that this girl here is breaking her heart, that Meade's life is ruined, and you're to blame. Now the time has come for you to speak. We know as well as you that young Meade is innocent. Here's our evidence."

He drew a handful of papers from his inside breast pocket and shook them in the face of the old man, who had shrunk back against the side of the car and stood staring, white-faced, thin-lipped, close-mouthed, inexorably resolved still.

"Read them," continued Rodney. "I'll admit to you that the whole thing would not be worth the paper it's written on in a court of law, or even in a newspaper report, but it's convincing to us, and you can make it convincing to everybody. You've got to speak."

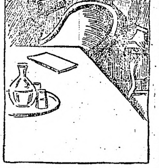
"Do you think, sir, that there's any power in your stretched-out arm, or in your rude voice or in your threatening gesture to make me speak?"

"By the Lord," exclaimed Winters, suddenly whipping out a Colt's .45 from the holster at his belt—he was dressed just as he had been when he rode away from the ranch—"out West we've got ways for persuading men to speak, and this is one of them."

Winters was a bigger man than Rodney. His life had been wild and rough, and his manner when he wanted was according. He would fain add physical compulsion under threat of death to Rodney's mental insistence.

"And do you think, sir, that I'm afraid of any lethal weapon you can produce or even use, any more than I am of Mr. Rodney's words?" The old man's eyes flashed, and his knees shook, but he had all the spirit of a soldier as he looked into Winters' stern face, full of threat and menace. His thin voice took on a certain quality of courage. It even rang a little. His courage was mainly moral, but there was some accompanying physical hardihood, that was undoubted. "You can beat me, you can even kill me, if you wish, but you can't make me say a word I don't want to say of my own free will," he cried out at last, his voice strangely rising.

"Gentlemen; gentlemen," said Helen Illingworth, rising and swiftly interposing between the secretary and the two angry men. She realized that the affair had gone far enough and that she must intervene. They had certainly failed lamentably, almost ludicrously. "You are wrong to threaten Mr. Shurtliff. He is old enough to be the father of either of you. Drop your arm, Mr. Rodney. Put up that pistol, Mr. Winters. Mr. Shurtliff," said the girl quickly, "as I am in a certain sense your hostess, and as you are in a certain sense my guest here, I apologize to you for the improper and impulsive conduct of these young men. They love Bertram Meade dearly, as I do. Let that be their excuse. Meanwhile, they will apologize to you here and now, I am sure."



"Out West We've Got Ways for Persuading Men to Speak."

There was a moment of silence. Rodney and Winters stared at each other, and both looked at the girl, confronting them so confidently in her superb and beautiful way. Winters smiled a little shamefacedly as he shoved his gun back into its holster. His had indeed been the greater offense.

"Mr. Winters, Mr. Rodney," said the girl insistently.

"Oh, I apologize. I suppose it was wrong to threaten him," said Rodney disgustedly.

"Hang it," said Winters, now utterly forgetful of conventions, "it wasn't the thing to do to draw a gun on a little old man, and I'm sorry I did it."

"And now that we've apologized you'll tell us the truth, won't you?" asked Rodney swiftly, with no appreciable change of manner.

"Yes, we beg it now, humbly," chimed in Winters, with anything but an humble air or voice.

"I won't have Mr. Shurtliff even appealed to now," said Miss Illingworth. "You have threatened him and you have apologized. Whether he forgives you or not is for him to decide, but he shall not be worried, or questioned, or insulted any more."

"Thank you, Miss Illingworth. I came for that book on the desk; your father wants it," said Shurtliff grimly, bowing slightly [illegible]

He stepped a little tremblingly—the scene had been unnerving—past the young men, picked up the book, bowed again formally and unmistakably to Miss Illingworth alone, and went out of the car. The honors of the encounter were certainly his.

"Well, Miss Illingworth," said Winters, "I don't know whether you made a mistake or not. I think I could have scared it out of him with this little persuader of mine—" He tapped the butt of the pistol.

"You couldn't have done it if you had killed him," said the woman, who had read the old secretary correctly. "He isn't what I call a daring man, but he has courage that would take him to the stake rather than make him give way, the courage of endurance rather than of action. When he speaks, if he ever does, it will be of his own free will."

"Or because you may persuade him," said Rodney. "By Jove, when I think it over, it was the finest thing you ever did."

"Bert Meade's a lucky fellow," said Winters. "You're the kind of a girl that ought to marry out West, where we try to breed men that will match up."

Helen Illingworth laughed a little, although she felt no inclination to merriment.

"That's a fine compliment," she said. "Well, this has rather shaken me, and I'm going to ask you gentlemen to excuse me."

"We'll see if he is working on the dam tomorrow."

"You will stay all night, Mr. Winters?"

"Your father invited me to take a bunk in his car, and, to be perfectly frank with you, I'd sleep out in the open rain rather than miss a chance of being in on the end of a game like this."

The girl bowed and left them.

"Dick," said Rodney slowly at last, as the two sat smoking together in the silence of complete understanding and good comradeship, which requires no expression in talk, "you're not the only man who thinks that girl would be a good wife to a man."

"Ah," said Winters, "sits the wind in that quarter, Rod?"

"Yes," answered the other, "but I'm fighting this thing through for Meade."

"Well, by George," said the big ranchman, "you're as good a man as Meade any day, fine fellow as he is. I wish I had some chance to get in this game and make myself worthy of the two of you, let alone the lady."

It was a rare confidence that Rodney had vouchsafed to his friend, and like every other Anglo-Saxon, having said his say, he did not wish to discuss it further.

"Do you know," he began, changing the subject abruptly, "I think things have turned out pretty well in spite of our foolishness a while ago. I believe if there's a spark of human gratitude in Shurtliff's heart, the girl's interposition when you and I were threatening him, and her refusal to allow him to be questioned later, will fan it into flame. And I have an idea that when he thinks it over he'll be about ready to tell."

"Are you sure he has anything to tell?"

"Certain."

"Well, I guess you're right. It sort of consoles me for having drawn my gun, without using it, too. And if he tells in the morning and we find Meade, everything will be lovely."

"For everybody but me," said Rodney.

"I'll tell you what, old man, when this thing's over, you're coming out to spend the rest of the winter with me on the ranch. It's the greatest place on earth for a man to buck up. There's no woman within fifty miles."

Rodney laughed a little grimly.

"I'll go you," he said.

CHAPTER XIX.

The Battle From Above.

The rain had stopped by morning, to the great relief of Colonel Illingworth, Severence and Curtiss, and the satisfaction of Helen. There was little sun to dry the big, red sandstone mesa, its sides seamed into fantastic shapes, which rose grandly between the valley of the Picket Wire and the ravine of the Kicking Horse, and which the young woman intended to cross in her walk toward the dam with Rodney and Winters. The siding near the steel-arch bridge was close to the rock wall of the ravine, which here had been so scoured out of the rocky side of the mesa by torrents of other days that it could fairly be called a gorge. Consequently the bank of clouds above the horizon to the northwest was hid behind the big butte from the occupants of the two private cars. Although the day did not promise to be fair, they had no idea of the further threat of storm presaged by the black masses to the northwest.

In sandy, porous soils, such as here prevailed, the rain is absorbed quickly. They could traverse the trails carpeted with the needles of centuries but ran through the dripping pines, without getting muddy, and with nothing more to fear than a wetting. Colonel Illingworth, Severence and Curtiss announced their intention of going back to the town to continue their consultations and observations concerning the progress of work on the bridge. Shurtliff, who went about his business [illegible] reserved, friendly calm and self-contained, had work to do at his desk. The woman and the two young men were for the dam.

After an early breakfast, therefore, the second car was uncoupled, and the engine backed it down around the [illegible] toward the viaduct twenty miles below. Rodney and Winters prepared to go with Miss Illingworth across the wooded island, with its cresting of stone, so to speak, that lay between the ravine and the valley. The conductor of the train, a local employee of the railroad, told them that the shortest way was directly over the mesa. The sandstone of which this huge mound was mainly composed had been broken and disintegrated on all sides by centuries of erosion and weathering, and there were practicable ascents and descents at both ends. The nearest ascent was at the side of the big tableland directly opposite which the car was placed.

The trails through the pines which covered the hill up to the very foot of the big butte were unfrequented and in bad repair, but practicable if the traveler was prepared for a wetting. The shortest and on the whole the easiest way to the dam would be to make their way to the foot of the mesa, climb it through the big ravine and cross it to the lower end, less than two miles away, where there was an easy descent to the dam.

"And if you get caught in the rain," said the conductor, "which ain't likely, for it's already rained more in the last twenty-four hours than in the last twenty-four years, it seems to me, there's a hut, half stone and half timber, up on the mesa that campers sometimes make use of when they want to see the sun rise, which is a mighty fine sight from there. It was in pretty fair shape when I visited it last year, and you can find shelter there. It's at the highest point on the mesa. You can see a long way up the gulch there, and a longer way down and up the Picket Wire valley. Above the dam it used to show a level, fertile stretch between the hills, but it's all a lake now."

Shurtliff, of course, declined Miss Illingworth's invitation to accompany the party on plea of urgent duties and important papers to prepare. He had spoken no words to Rodney or Winters, and those gentlemen made no effort to engage him in conversation. They were, in truth, a little ashamed of their actions of the night before. They were exceedingly anxious as to whether their theories as to the possible effect of Miss Illingworth's action would be justified, so they carefully avoided the secretary, letting the leaven work if it would. To their disappointment, it gave no sign of life or action.

Of the four most interested in Meade, Winters was the only one who had slept soundly that night. Rodney was too much in love with the woman ever to sleep soundly again, he thought—certainly not until her future had been settled and her relations to Meade finally determined. Shurtliff's feelings were painful in the extreme. Torn between the old habit of affection for the dead, his new habit of affection for the woman, his oft-recurring compunction of conscience, his immediate resentment of the treatment of the two men, his acknowledgment of the splendid action of the woman, his suspicions, his uncertainty, as to how the younger Meade would take it if he told the truth, he slept not at all.

Into Helen Illingworth's mind also had come, although, to her credit be it said, not until she had retired and had thought over her action in the light of the hints given, that perhaps her generous interposition in behalf of Shurtliff might move his gratitude and that he might at last vouchsafe her the help which she felt more certain than ever he alone could give. She was glad when the thought came to her that she could look herself squarely in the face and declare to her conscience that it had not been back of her action, which had been purely spontaneous.

The possibility, although a faint one, that Meade might be working on the dam and that she might see him on the morrow would have sufficed to give her a wakeful night. Rodney was a more careful observer than Winters, but even the cattleman noticed that she looked worn and strained as he helped her out of the car for their tramp across the mesa to the dam.

"You know," he said, with rough-and-ready sympathy, "we haven't the least assurance that Meade is there. It's only a chance, and probably a long one."

"I shall never rest until it is decided absolutely one way or the other," said the woman.

"Well, I'm not much of a walker," said the cattleman. "I generally prefer to get over the ground astride of a broncho, but I guess I can keep up with the party for two miles, if that's the distance."

It was dark and damp and wet under the pines. Although the two men cleared the way for her, holding branches back and shaking the water off the drooping boughs, it was well Helen was protected from the wet. She had tramped hills and mountains many a time, camp and forest were familiar to her. She wore a short-skirted dress, stout boots and leggings, and a yellow western slicker.

The exertion of the upward climb, stumbling over broken branches and uprooted logs and floundering through boggy places on the trail, brought a touch of color to her face, and though damp, the air sweet and fragrant, clean and pure, refreshed and pleased her greatly; the men, too. It was a hard pull, and she was out of breath when she reached the broken coulee, or ravine, which led to the top of the big red sandstone plateau.

"I'm terribly out of practice," she said to the two men, "but I don't believe I'm in any worse state than you are, Mr. Winters."

"I told you I wasn't any good on foot," said Winters, who was blowing like a grampus.

Rodney laughed at the two of them. "Look at me," he said. "I'm as fresh as when I began."

"Well, you're used to walking," returned Winters. "It's this plugging along this broken trail that has knocked us out. The rich, they ride on—bronchos, you know."

"When we get on top of the mesa we will find it easier going," said Rodney encouragingly.

"Let us start," said the girl, suddenly serious, as she thought what might be at the end of the journey.

"Before we go any farther," said Winters, staring up the ravine at the sky which showed above it, "just take a look at that."

He pointed to the black clouds rapidly rising, apparently against the wind, which swayed rather violently the tops of the tallest pines, although they were protected and in comparative quiet where they stood in the ravine.

"It looks as if there were more rain there," said Rodney.

"It's incredible," answered Winters, "after what we've had."

"But it certainly is coming down again, and if I'm any judge, it will be another cloudburst."

"Perhaps we'd better go back," suggested Winters to Miss Illingworth.

"Go back!" exclaimed the girl. "When I'm as near as this?"

"But it's only a possibility, you know."

"Possibility or not, it would take a deluge in my path to stop me. Come."

It was an entirely practicable climb but rather a hard one on the wet crumbling rocks. It did not take the three young people long to surmount the difficulties, however, and after a few minutes they stood on top of the mesa. It was bare of vegetation, save in scattered little earth pockets, grass-covered, where dwarfed pines grew, stunted trees centuries old.

Near at hand was the hut of which the conductor had spoken. It stood upon a little rise above the general level, and from it one could see far in every direction. Between the hills and over the lower crest of Baldwin's knob they could even see dimly the far-off plains, a little sickly yellow light still lingering there before the advance of the storm.

The hut was made of stone and logs. They had not any more than reached it before the storm began. Claps of thunder, flashes of lightning under which the army on the dam were fighting, were heard and seen with tenfold clearness by the little group on the huge upland.

It was a sight to awe the very soul of humanity. Miles and miles down the mountain side and among the hills the whirling battalions of clouds rolled and tumbled and tossed and clashed like aerial armies. The lightning, while it was not in sheets, was practically continuous, flash succeeding flash in uncountable and blinding succession. Again they noticed the strange coruscating, bursting effect as bolt after bolt apparently struck some granite ledge and was then thrown back in splinters of fire. The heavy, awful roll of the thunder was continuous and terrific.

They stood staring through door and windows in silence, Meade and their quest forgot in the appalling tempest by all except the woman. It was she who recalled them.

"Let us hasten on," she said, and she had almost to scream to make herself heard in the wild tumult. "It's magnificent, wonderful, but—"

As a matter of fact, all the manifestations of nature at its grandest would not have sufficed to turn her head away from her lover's face if she could have seen him.

"You can't go now," said Winters decisively, "the rain's bad enough as it is, and that cloud will burst in a minute. Old Noah's flood won't be a circumstance to it."

"I'm protected from the rain," she answered.

Winters shook his head.

"The weight of it would almost beat you down, Miss Illingworth."

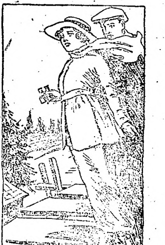
"I haven't had any experience with it, but I think Winters is right," said Rodney.

"I'll go on alone, then," said the girl passionately, stepping out of the house, "if you gentlemen don't care to come."

The next moment, with a culminating scream like the shriek of all the lost souls of creation heard above the furious detonating roar of the thunder, the wind added its quota to the demonstration of natural force, and now the rain fairly dropped upon them in apparently solid sheets. Of course clouds do not burst. Such a thing is scientifically and meteorologically impossible but anyone who has ever experienced the suddenness and fury and weight of a western deluge in a normally dry land will understand the term. The wind swept over the plateau, where it had free course like a hurricane; the rain came down in masses apparently. Until their eyes became accustomed to it, the falling water blotted out the landscape.

The woman was hurled against the side of the house by the sudden and violent assault of the hurricane. The two men half dragged, half carried her around to the lee side of the cabin. The roof of the hut had given way here and there, and within it was soon flooded. Where they stood, however, by chance happened to be the soundest part of the overhang of the roof, and they were in some degree protected, that is, from the direct violence of the downpour. They were, of course, drenched in a few minutes in spite of their slickers. With one man on either side of her to give her as much protection as possible, the woman leaned against the stone wall and stared through the rain down the valley, seeking to see the dam, perhaps a mile and a half away. Of course the maximum of the downpour could not last any more than the maximum of the gale, but the deluge was succeeded by a heavy, driving rain still swept on by a strong wind.

Below the mesa the lake was whipped into foam by the beat of the rain and rolled into waves by the assault of the wind. All three of them knew what this deluge portended. The downpour would raise the level of the lake so that it would overflow the dam, which would be swept away, the valley would be inundated by a flood like a tidal wave, the incompleted viaduct would be ruined, the town would be overwhelmed, the loss of life and property would be appalling.



Staring Down at the Dam Helen Illingworth Took the Glass From Rodney.

"The spillway ought to take it," shouted Winters, knowing what was in the minds of the other two by what was in his own.

"It's not finished," roared Rodney.

Winters threw up his hands.

"Will the dam hold it?" cried the woman, understanding.

"Until the water rises above it. Just as soon as it begins to wash over, it will go, and the [illegible] these waves," answered Rodney at the top of his voice.

"And the bridge and the town," screamed the woman.

"They, too."

"And father?"

"He'll be all right; they've had warning. The engineers on the dam must know the danger now. They're working like mad."

He had brought a [illegible] powerful [illegible] and was straining his eyes through it. The violence of rain and wind had somewhat abated although it was still coming down in torrents. With his knowledge of what would probably be attempted, Rodney was able to see through the glass something of what was being done, even at that distance.

"They're building palisades on top of the dam and backing them with an earth mound. See! they are dropping sandbags over," he shouted, handing the glass to the other man.

"By heaven," shouted Winters, "they're making a magnificent fight."

In his excitement he left the shelter of the hut and started through the rain toward the edge of the mesa, where he could have a better and nearer view. In spite of Rodney's remonstrances, even though [illegible] by his outstretched arm, the woman followed. Presently all three, [illegible] to the beat of the rain and the [illegible] of the wind, stood watching [illegible] on the dam. It was [illegible], fortunately, or else they could [illegible] have sustained the attack of that wind and rain, nor could they have seen at all, even with that glass.

Staring down at the dam for a moment, Helen Illingworth took the glass from Rodney. She [illegible] it rapidly and looked steadily [illegible]. She knew what she would see [illegible] she stood [illegible] splendid nerve [illegible] the length of the [illegible].

"I don't see him [illegible] there," she said at last, [illegible] back to its owner.

"If he were there [illegible] him all right," said Winters [illegible], "because he'd be in the thick of the fight."

"I doubt if you can [illegible] anyone, even through the glass, at such a distance," said Rodney, after he had focused it and [illegible]. "Yet if he were [illegible] certainly would [illegible] that kind. [illegible]"

"I can't see him," [illegible] Winters in turn. [illegible] making to say [illegible]

"Will it hold?" [illegible] the woman.

"Impossible," said Rodney.

"I give it one hour," said Winters, handing over the glass.

"Not more than [illegible]," asserted the other, after another look. "See for yourself, Miss Illingworth."

World's Thickest Tree.

It is said the largest tree known, in thickness, is a partly-decayed chestnut in Sicily, which is 60 feet across. Mexican cypress and the oriental plane have reached 40 feet. This puts the California big tree and the baobab in the background, but the [illegible] tree is of greater bulk in [illegible] height and girth and the baobab [illegible] in relation to height.

Esplee News.

Andrew H Speten and family were Grygla visitors last Saturday.

Herman Svenpladsen and A. H. Speten took in the Auction sale, at Albert Olson's last Tuesday.

A few of the neighbors around here were in Goodridge last Wednesday and took out a load of furniture for Louis Larson from Battle Lake.

Andrew Speten made a short call at A. Shores last Sunday afternoon.

The Ladies Aid will meet at the home of Mr. and Mrs. Asmoe. Wednesday May 16th.

Miss Thinnie Olson went with A. H. Speten and family to Grygla last Saturday, she stepped off at Louis Carlson's and took in the meeting there in the evening.

A. H. Speten was a Goodridge visitor Monday.

We sure are having nice weather now so it is drying up pretty good.

A Special Campaign.

A special campaign has been commenced by Robert W. Hargadine, state fire marshal, to free all elevators, warehouses, storehouses and structures where all kinds of foodstuffs are stored or kept, from every fire hazard.

The work began in the district sequestered by the state safety commission in Minneapolis. In that district, where an enormous supply of foodstuffs is manufactured and stored extra precautions have been taken to prevent fires. Twenty-five structures which are considered fire hazards have been ordered demolished and other buildings subjected to a thorough inspection; and hazardous conditions ordered corrected to prevent fires.

Realizing that every ounce of the state's and nation's resources must be conserved, this department is enlisting the co-operation of fire chiefs and fire prevention societies throughout the state in the prevention of waste through fires.

If Governor Burnquist, and other leaders, are urging the people to help conserve the resources of the state, and farmers are being prevailed upon to cultivate every available acre for more food products, it would be most reprehensible to permit this same food, the stored power that will influence the desting of nations, to be destroyed in fire inviting warehouses and storage buildings.

Despite the enormous American fire losses in the first three months of 1916, which aggregated $82,376,820, the loss for the first three months of this year in this country was $83,559,430 There were 49 fires, each of which caused a property loss of $100,000 or more, and the largest losses during March were to grain elevators. Therefore, special steps are being taken to guard the flour mills and elevators of Minnesota from destruction by fire.

The state fire marshall asks the cooperation of all of the citizens of Minnesota in his efforts to eliminate fires from carelessness and incendiarism.

Scandinavians Should Enlist In The Navy.

In a letter to a local constituent Congressman Halvor Steenerson says that Scandinavians who enlist should go into the navy. From many generations of seafaring ancestors they have inherited an aptness for work at sea, and even the second and third generation born on the western prairies will quickly learn the duties of a seaman and take to them naturally. Therefore they can render America their greatest service in the navy. Uncle Sam's most urgent need for men is in this arm of the service.—Warroad Pioneer.

Three Years Of High Prices For Live Stock.

"Raise more live stock; there will be high prices for at least three years to come"; this is an emergency message to farmers and stock growers from G. Howard Davison, president of the International Live Stock Exposition and chairman of the executive committee of the National Agricultural Society.

Says Mr. Davison: "In my judgement there will be a scarcity of nearly all kinds of live stock for some time to come and farmers and stockmen should make their plans accordingly. This means that there should be no selling of young animals or female breeding stock merely because current prices are high. Better money can be made by working on the understanding that high prices for hogs, cattle, sheep and other live stock will rule for at least three or four years to come.

"There is no doubting this in view of the knowledge that Europe has lost over 53 per cent of its live stock - that the whole world in fact is suffering from a serious shortage in all kinds of food animals.

"There is so much concern over a possible wheat or potato shortage that the public is forgetting the meat situation. As a matter of fact, if every effort were made to increase the country's supply of cattle, it would be at least three years before solid results would be apparent. As regards sheep, it would require at least two years to make any considerable increase in numbers, even though every ewe were held back for breeding purposes.

"The best possible program for the farmer from the standpoint of either patriotism or profit is to raise more live stock and to work on a three or four year program, at least.

Stallion.

Will make the following stands with my fullblood Percheron stallion maximus 42170.

C. Eg, Erie, Monday
Edwin Hanson, Tuesday afternoon and Wednesday forenoon.
Ole A. Olsen, Reiner, Thursday
Beson and Yoon Livery barn, Saturday

Why not breed to a good horse and get a colt that will be worth from $25. to $50 00 or more when three years old.

S. Lysbakken.

What We Eat.

The people of the United States consume fully twice as much meat per capita as do the people of Europe. Dried beans, peas, and lentils may replace meat in the diet to a large extent, to the advantage of outdoor workers especially.

Had Narrow Escape.

"Did you attain the high ideals you set for yourself when you were young?" asked the friend of his boyhood. "No," replied the millionaire; "and I'm glad I didn't. I see now there was no money in them."

Picnic in a Tree.

In a public park of Tacoma, Wash., the stump of a huge cedar tree has been hollowed out to form a shelter for picnickers; the top of the stump is capped by a platform which is now used as a bandstand.

Truly Superior.

Speaking of American superiority, Princeton is reported to have an unkissed senior, because he has never seen a woman worthy of his lips. Every man can't be a hermit.—Pittsburgh Dispatch.

Seein' Things.

It's a safe bet that when Aladdin rubbed his lamp and saw what he saw, he rubbed the other one to be sure he wasn't dreaming.

Jury Qualifications.

In England aliens can sit on a jury after ten years domicile. In Ireland they are absolutely disqualified.

Great Ambitions.

Most people would succeed in small things if they were not troubled with great ambitions.—Longfellow.

Courage.

Courage consists not in hazarding without fear, but in being resolute-minded in a just cause.

Infallible Indication.

When a man says he merely plays for pastime the indications are he quits loser.—Atchison Globe.

Leaves on Tall Trees.

Trees that grow the highest have the most pointed leaves.

MONEY FOR FARMERS.

[National Crop Improvement Service.]

Many of our farmers will not have money enough to put in a maximum crop. This should not be the case. Of course, during this war excitement it is pretty hard to get anyone to do anything but run around in circles, but the greatest business problem we have is to finance our farmers so that they can get the maximum results for themselves and for our community. We believe that if the banks will ask young farmers and tenants who have not established their credit, to make a statement regarding what they want to do with the money, that they will take very little risk in advancing whatever money any farmer will intelligently use this year.

It is true that the federal reserve banks will re-discount farmers' paper, but they do it entirely on the credit of the bank asking for the re-discount.

We believe that our business men would be very glad to pro-rate any loss that any bank would make in extending loans to any farmer who wants to increase the production of his farm even though his land may be mortgaged all that it can stand. Especially in those counties where county agents can advise and O. K. the project, our bankers should have no hesitancy in furnishing whatever money may be required. There is very little risk because the world is short of food and everything will be high for this year and probably several years to come.

NEXT YEAR'S CROP

Let Us Begin Now to Organize for More Prosperity!

[National Crop Improvement Service.]

It is one of our American traits to speed up to high tension for a few days and then to relapse into our old "easy-going" habits. If we can only learn by experience that we must organize against emergencies of all kinds for peace and war, this excitement will not have been in vain. It will do little good to shout at the farmer through a megaphone. He knows his business and is doing just as good as he can under the circumstances. If there is any improvement to be made, it is to improve circumstances. Our prosperity depends upon the prosperity of the farmers and it is our duty to get him the best price possible consistent with quality. If we want the farmer to do better, we must do better by him. However, he can find no complaint about the present prices nor for several years to come. We may be too late to do very much more this spring, although we still have barley, corn and potatoes to put into the ground. We should organize for service in this county and get ready for early fall plowing after harvest.

THE BARLEY ACREAGE.

[National Crop Improvement Service.]

In 1915 we raised nearly 229,000,000 bushels on 7,000,000 acres. We did not fare so well in 1916 on account of the bad season. On seven and one half million acres we raised 181,000,000 bushels. The price of barley will warrant a large increase in the acreage this year. Forty-eight million bushels of barley were malted and about 25,000,000 of that 48,000,000 was sent back in the shape of feed to the farm. As an economic problem, it would seem that the high price of barley for malting would greatly offset any feeding value, if any, lost thereby.

The season for planting barley is one week late, and therefore, barley can be put in to advantage up to the 10th of May, and perhaps the 15th. It is generally the best farm practice to put barley in just ahead of corn planting. There is less labor in producing a field of barley than a field of corn and a great deal less risk. If you are short of labor or your farm it will pay you to put in some barley.

If you put in all of your crops and still have some land idle, both oats and barley can be sown for hay or green feed which will be immensely valuable this year.

STILL TIME TO SOW BARLEY.

[National Crop Improvement Service.]

The seeding time of barley should be done later than that of oats or spring wheat, as an early spring frost is more detrimental to young barley than to other small cereals. The season is usually a week later. In Canada barley is sown up into June but that is not advocated in this country. Still, the second or third week in May will probably be safe this year.

A drill or broadcast seeder is commonly used and the barley is sown at the rate of 1½ to 2 bushels to the acre. Where it is desirable to seed the land down to clover and timothy, 1 to 1½ bushels of seed barley as a nurse crop is sufficient.

TEST BARLEY.

[National Crop Improvement Service.]

All seed barley should be tested for vitality before sowing as the seed is quite frequently injured by heating in the stack or bin. If the seed is of low vitality and does not test 90 per cent it should be regarded as inferior and new seed should be purchased.

INSURE YOUR CORN

Don't Gamble With Your Corn Crop. Test Every Ear Before Planting. Every Weak or Dead Ear Means Dollars Lost at Harvest.

[National Crop Improvement Service.]

It is a known fact that the simple little act of testing all seed corn before planting will add many bushels to the corn crop and will pay the farmer about five times as much per hour for his labor as will any other farm labor.

There is nothing hard about it, all methods of testing seed corn are easy and inexpensive. You can test the kernels in blotters or "rag-doll" testers at home, making them yourself, or you can invest in a commercial tester that will last for years. Your agricultural college, county agent, or the U. S. Department of Agriculture at Washington will be glad to give you full particulars.

Seed testing will stop one of these leaks in farm practice that change gain into loss. Figure out for yourself how many hills the six or seven hundred kernels of corn from a dead or weak ear will plant, and figure out how your corn yield will drop if two or three, or a dozen, or maybe fifty such ears should get planted.

BY-PRODUCT STOCK FEEDS.

[National Crop Improvement Service.]

A lot of well-meaning folks think that just because certain materials are left-overs from the manufacture of food for humans, that it is "waste" and of no value for stock feed. Nothing is further from the truth. In very many cases, the so-called "offal" left after the manufacture of flour, malting, corn products, breakfast foods, etc., are the best of stock feeds, and can be bought economically and fed to bring a profit to the farmer. The man who turns up his nose at the thought of combining by-products with silage and other low-priced meat producing foods, is behind the times and usually fails to show even interest on his money at the end of the year. Feeding whole grain, whether it be corn, wheat, rye or oats, is wasteful and is robbing man of his rightful prerogative—that of taking that part of all grain adapted to his needs. It is easy to find out the protein content of any article, or mixture, of stock feedstuffs now on the market, and it is merely a matter of the farmer figuring out the worth of the foods on their nourishing power, and then to purchase that which will give him the most economical feed. In practically all states, all feedstuffs must be labeled with their food content—for those who wish to see, the facts are printed.

Fanning and Grading Seed Barley.

[National Crop Improvement Service.]

Not nearly enough attention is given to getting the uniform size of seed grain, especially is this true in barley, where it is important that the germination should all take place on the same day. Therefore, the kernels should be of the same size and weight. The very largest should perhaps be removed as well as the smaller ones, leaving the seed plump and uniform. It is true that small seeds and giant seeds will germinate, but the plant food contained therein will undoubtedly make an unevenness in the maturity at harvest.

ROTATION LEASES.

[National Crop Improvement Service.]

There is nothing which endangers America so much today as our very much abused farm tenant system. We ought to have something in every lease which will protect land and protect the people as well as posterity. Year to year tenants who scratch a little and move away, should be compelled to settle down and landlords should be compelled to make a time-rotation lease. It is easy to talk about compelling this and compelling that, but we mostly are a very sloppy people whose motto is "the easiest way is the best."

If we let our soil run down, our whole structure will fail. In order to obtain a larger yield of grain, the soil must be fed. The colleges and experiment stations beyond the Mississippi river are entirely too timid about preaching soil conservation. In fact, all of us are rather prone to tell our audience what we think they would rather hear.

KILL THE WEEDS.

[National Crop Improvement Service.]

"Spring plowing, or disking, as soon as the weed seeds have germinated, is usually a profitable practice. Where small grain is to be sown, the sowing should be done soon after plowing; but where corn, potatoes, or the sorghums are to be grown, there is often a period of several weeks between the time of the germination of the weed seeds and the time when the season is sufficiently advanced to plant the crop. This period should be utilized as far as possible for the destruction of weeds before the crop is planted. Much labor in keeping the crop free from weeds during its growing period can thus be saved."—E. C. Chilcott, agriculturist in charge, Washington, D. C.

Farm For Rent—inquire at the G. N. Depot, Thief River Falls, Minn. tf.

Base ball dance Saturday evening May 12th.

City and Farm Property for sale. Goodridge Land Co. Call at the Farmers State BanK.

Owen Olson left Tuesday for Steven Point, Wis. with a car for Nels Thorstenson.

Ragne Johnson, who has been visiting at the home of R. R Johnson, left Tuesday morning for Montana where he will work.

A. Gilsoul, of Jelle was in town Monday making arrangements for an auction sale which will be held on his farm in Sec 27, town of Lee, on Monday May 14th. Mr. Gilsoul expects to leave shortly for Bemidji, where he will work in the round house.

Mr. and Mrs. L. G. Ludtke, of Thief River Falls were Goodridge visitors Wednesday.

We are putting in a branch to sell flour, feed, Bran and Shorts at Goodridge, and we will give you the best prices considering the quality that can be obtained Call at the O K, Restaurent or City Meat Market for prices.
Singer Bros.

FOR SALE—1 12 Disk, or one 14 Disk, will sell either one. good condition, also an old wagon and a hay rake.
Andrew T. Nelson,
Highlanding

We will buy your potatoes, and will pay the highest market price.
Tessum Seed Grain and Supply Co.
Goodridge.

Barred Plymouth Rock Eggs for setting, for sale at 5 cents apiece, prepaid.
Anton Knutson,
(Apr. 12—4 wks) Rt. 1, Goodridge.

I will stand for service on the old Lysbakken place my black graded stallion, $5.00 standing colt.
E. Jenson, Owner.

Will sell or exchange for property in Thief River Falls the following land, Lot 4 in Section 30 and Lots 1, 2, 3 and NE¼ SW¼ in Sections 31-155-39.
H. O. Kjomme, Thief River Falls, Minnesota.

Seed Barley--Seed Flax Seed Oats.

We have a limited amount of seed barley, seed flax, Sixty Day oats, and Golden Yellow oats to offer If in need of any, order quick.
Tessum Seed, Grain & Supply Co., Thief River Falls, Minn.

For Rent.

The Bernt Johnson quarter, the NE¼, of Section 4, Township of Highlanding. About 130 acres under cultivation.

Also other farms for rent,
Inquire at Goodridge State Bank

Notice To The Public

All owners of live stock are, hereby notified to keep their stock from running at large within the streets within the Village. Stock found at large on the streets will be taken up and the owner shall pay the penalty provided in the case.

By order, Village Council.

Clean up Order - Issued by the Board Of Health,

All residents of the Village of Goodridge are hereby notified to clean up their premises before the 15th day of May, 1917, under pain of incuring the penalty provided by law for neglecting to comply with the ordinance provisions. As a measure for the protection of the public health it is necessary that all winter accumulations be removed before the approach of warm weather. Compliance with this request is earnestly requested.

Signed, Board of Health.

CONGRESS GIVES MONEY AND MATERIAL; THE NORTHWEST MTST GIVE THE MEN!

"The Nation has called for its sons. It is up to the Northwest to answer. Young men have been coming forward at a fair rate, but more must come Part of the fleet is idle and will be until America wakes up. Another 40 men a day would put four more big guns in action.

Recruiting stations at:
304 Marquette Ave., Minneapolis. Minn., Commercial Building, St. Paul, Minn.,
Duluth, Minn, Brainerd, Minn., St. Cloud, Minn., Fargo, N. Dak., Grand Forks, N. Dak., Minot, N. Dak.
P. O. Building.

Esplee News.

Andrew H Speten and family were Grygia visitors last Saturday.

Herman Svenpladsen and A. H. Speten took in the Auction sale at Albert Olson's last Tuesday.

A few of the neighbors around here were in Goodridge last Wednesday and took out a load of furniture for Louis Larson from Battle Lake.

Andrew Speten made a short call at A. Shores last Sunday afternoon.

The Ladies Aid will meet at the home of Mr. and Mrs. Asmoe, Wednesday May 16th.

Miss Thinnie Olson went with A. H. Speten and family to Grygia last Saturday, she stopped off at Louis Carlson's and took in the meeting there in the evening.

A. H. Speten was a Goodridge visitor Monday.

We sure are having nice weather now so it is drying up pretty good.

A Special Campaign.

A special campaign has been commenced by Robert W. Hargadine, state fire marshall, to free all elevators, warehouses, storehouses and structures where all kinds of foodstuffs are stored or kept, from every fire hazard.

The work began in the district sequestered by the state safety commission in Minneapolis. In that district, where an enormous supply of foodstuffs is manufactured and stored extra precautions have been taken to prevent fires. Twenty-five structures which are considered fire hazards have been ordered demolished and other buildings subjected to a thorough inspection, and hazardous conditions ordered corrected to prevent fires.

Realizing that every ounce of the state's and nation's resources must be conserved, this department is enlisting the co-operation of fire chiefs and fire prevention societies throughout the state in the prevention of waste through fires.

If Governor Burnquist, and other leaders, are urging the people to help conserve the resources of the state, and farmers are being prevailed upon to cultivate every available acre for more food products, it would be most reprehensible to permit this same food, the stored power that will influence the destiny of nations, to be destroyed in fire inviting warehouses and storage buildings.

Despite the enormous American fire losses in the first three months of 1916, which aggregated $82,376,820, the loss for the first three months of this year in this country was $83,559,430. There were 49 fires, each of which caused a property loss of $100,000 or more, and the largest losses during March were to grain elevators. Therefore, special steps are being taken to guard the flour mills and elevators of Minnesota from destruction by fire.

The state fire marshall asks the cooperation of all of the citizens of Minnesota in his efforts to eliminate fires from carelessness and incendiarism.

Scandinavians Should Enlist In The Navy.

In a letter to a local constituent Congressman Halvor Steenerson says that Scandinavians who enlist should go into the navy. From many generations of seafaring ancestors they have inherited an aptness for work at sea, and even the second and third generation born on the western prairies will quickly learn the duties of a seaman and take to them naturally. Therefore they can render America their greatest service in the navy. Uncle Sam's most urgent need for men is in this arm of the service.—Warroad Pioneer.

Three Years Of High Prices For Live Stock.

"Raise more live stock; there will be high prices for at least three years to come"; this is an emergency message to farmers and stock growers from G. Howard Davison, president of the International Live Stock Exposition and chairman of the executive committee of the National Agricultural Society.

Says Mr. Davison: "In my judgement there will be a scarcity of nearly all kinds of live stock for some time to come and farmers and stockmen should make their plans accordingly. This means that there should be no selling of young animals or female breeding stock merely because current prices are high. Better money can be made by working on the understanding that high prices for hogs, cattle, sheep and other live stock will rule for at least three or four years to come.

"There is no doubting this in view of the knowledge that Europe has lost over 50 per cent of its live stock - that the whole world in fact is suffering from a serious shortage in all kinds of food animals.

"There is so much concern over a possible wheat or potato shortage that the public is forgetting the meat situation. As a matter of fact, if every effort were made to increase the country's supply of cattle, it would be at least three years before solid results would be apparent. As regards sheep, it would require at least two years to make any considerable increase in numbers, even though every ewe were held back for breeding purposes.

"The best possible program for the farmer from the standpoint of either patriotism or profit is to raise more live stock and to work on a three or four year program, at least.

Stallion.

Will make the following stands with my fullblood Percheron stallion maximus 42170.

C. Eg, Erie, Monday
Edwin Hanson, Tuesday afternoon and Wednesday forenoon.
Ole A. Olson, Reiner, Thursday
Leson and Yonn Livery barn, Saturday

Why not breed to a good horse and get a colt that will be worth from $25. to $50 00 or more when three years old.
S. Lysbakken.

What We Eat.

The people of the United States consume fully twice as much meat per capita as do the people of Europe. Dried beans, peas, and lentils may replace meat in the diet to a large extent, to the advantage of outdoor workers especially.

Had Narrow Escape.

"Did you attain the high ideals you set for yourself when you were young?" asked the friend of his boyhood. "No," replied the millionaire; "and I'm glad I didn't. I see now there was no money in them."

Picnic in a Tree.

In a public park of Tacoma, Wash., the stump of a huge cedar tree has been hollowed out to form a shelter for picnickers; the top of the stump is capped by a platform which is now used as a bandstand.

Truly Superior.

Speaking of American superiority, Princeton is reported to have an unkissed senior, because he has never seen a woman worthy of his lips. Every man can't be a hermit.—Pittsburgh Dispatch.

Seein' Things.

It's a safe bet that when Aladdin rubbed his lamp and saw what he saw, he rubbed the other one to be sure he wasn't dreaming.

Jury Qualifications.

In England aliens can sit on a jury after ten years domicile. In Ireland they are absolutely disqualified.

Great Ambitions.

Most people would succeed in small things if they were not troubled with great ambitions.—Longfellow.

Courage.

Courage consists not in hazarding without fear, but in being resolute-minded in a just cause.

Infallible Indication.

When a man says he merely plays for pastime the indications are he quits loser.—Atchison Globe.

Leaves on Tall Trees.

[illegible]

MONEY FOR FARMERS.

[National Crop Improvement Service.]

Many of our farmers will not have money enough to put in a maximum crop. This should not be the case. Of course, during this war excitement it is pretty hard to get anyone to do anything but run around in circles, but the greatest business problem we have is to finance our farmers so that they can get the maximum results for themselves and for our community. We believe that if the banks will ask young farmers and tenants who have not established their credit, to make a statement regarding what they want to do with the money, that they will take very little risk in advancing whatever money any farmer will intelligently use this year.

It is true that the federal reserve banks will re-discount farmers' paper, but they do it entirely on the credit of the bank asking for the re-discount.

We believe that our business men would be very glad to pro-rate any loss that any bank would make in extending loans to any farmer who wants to increase the production of his farm even though his land may be mortgaged all that it can stand. Especially in those counties where county agents can advise and O. K. the project, our bankers should have no hesitancy in furnishing whatever money may be required. There is very little risk because the world is short of food and everything will be high for this year and probably several years to come.

NEXT YEAR'S CROP

Let Us Begin Now to Organize for More Prosperity!

[National Crop Improvement Service.]

It is one of our American traits to speed up to high tension for a few days and then to relapse into our old "easy-going" habits. If we can only learn by experience that we must organize against emergencies of all kinds for peace and war, this excitement will not have been in vain. It will do little good to shout at the farmer through a megaphone. He knows his business and is doing just as good as he can under the circumstances. If there is any improvement to be made, it is to improve circumstances. Our prosperity depends upon the prosperity of the farmers and it is our duty to get him the best price possible consistent with quality. If we want the farmer to do better, we must do better by him. However, he can find no complaint about the present prices nor for several years to come. We may be too late to do very much more this spring, although we still have barley, corn and potatoes to put into the ground. We should organize for service in this county and get ready for early fall plowing after harvest.

THE BARLEY ACREAGE.

[National Crop Improvement Service.]

In 1915 we raised nearly 239,000,000 bushels on 7,000,000 acres. We did not fare so well in 1916 on account of the bad season. On seven and one half million acres we raised 181,000,000 bushels. The price of barley will warrant a large increase in the acreage this year. Forty-eight million bushels of barley were malted and about 25,000,000 of that 48,000,000 was sent back in the shape of feed to the farm. As an economic problem it would seem that the high price of barley for malting would greatly offset any feeding value, if any, lost thereby.

The season for planting barley is one week late, and therefore, barley can be put in to advantage up to the 10th of May, and perhaps the 15th. It is generally the best farm practice to put barley in just ahead of corn planting. There is less labor in producing a field of barley than a field of corn and a great deal less risk. If you are short of labor on your farm it will pay you to put in some barley.

If you put in all of your crops and still have some land idle, both oats and barley can be sown for hay or green feed which will be immensely valuable this year.

STILL TIME TO SOW BARLEY.

[National Crop Improvement Service.]

The seeding time of barley should be done later than that of oats or spring wheat, as an early spring frost is more detrimental to young barley than to other small cereals. The season is usually a week later. In Canada barley is sown up into June but that is not advocated in this country. Still, the second or third week in May will probably be safe this year.

A drill or broadcast seeder is commonly used and the barley is sown at the rate of 1½ to 2 bushels to the acre Where it is desirable to seed the land down to clover and timothy, 1 to 1¼ bushels of seed barley as a nurse crop is sufficient.

TEST BARLEY.

[National Crop Improvement Service.]

All seed barley should be tested for vitality before sowing as the seed is quite frequently injured by heating in the stack or bin. If the seed is of low vitality and does not test 90 per cent it should be regarded as inferior and new seed should be purchased.

INSURE YOUR CORN

Don't Gamble With Your Corn Crop. Test Every Ear Before Planting. Every Weak or Dead Ear Means Dollars Less at Harvest.

[National Crop Improvement Service.]

It is a known fact that the simple little act of testing all seed corn before planting will add many bushels to the corn crop and will pay the farmer about five times as much per hour for his labor as will any other farm labor.

There is nothing hard about it, all methods of testing seed corn are easy and inexpensive. You can test the kernels in blotters or "rag-doll" testers at home, making them yourself, or you can invest in a commercial tester that will last for years. Your agricultural college, county agent, or the U. S. Department of Agriculture at Washington will be glad to give you full particulars.

Seed testing will stop one of these leaks in farm practice that change gain into loss. Figure out for yourself how many hills the six or seven hundred kernels of corn from a dead or weak ear will plant, and figure out how your corn yield will drop if two or three, or a dozen, or maybe fifty such ears should get planted.

BY-PRODUCT STOCK FEEDS.

[National Crop Improvement Service.]

A lot of well-meaning folks think that just because certain materials are left-overs from the manufacture of food for humans, that it is "waste" and of no value for stock feed. Nothing is further from the truth. In very many cases, the so-called "offal" left after the manufacture of flour, malting, corn products, breakfast foods, etc., are the best of stock feeds, and can be bought economically and fed to bring a profit to the farmer. The man who turns up his nose at the thought of combining by-products with silage and other low-priced meat producing foods, is behind the times and usually fails to show even interest on his money at the end of the year. Feeding whole grain, whether it be corn, wheat, rye or oats, is wasteful and is robbing man of his rightful prerogative—that of taking that part of all grain adapted to his needs. It is easy to find out the protein content of any article, or mixture, of stock feedstuffs now on the market, and it is merely a matter of the farmer figuring out the worth of the foods on their nourishing power, and then to purchase that which will give him the most economical feed. In practically all states, all feedstuffs must be labeled with their food content—for those who wish to see, the facts are printed.

Fanning and Grading Seed Barley.

[National Crop Improvement Service.]

Not nearly enough attention is given to getting the uniform size of seed grain, especially is this true in barley, where it is important that the germination should all take place on the same day. Therefore, the kernels should be of the same size and weight. The very largest should perhaps be removed as well as the smaller ones, leaving the seed plump and uniform. It is true that small seeds and plant seeds will germinate, but the plant food contained therein will undoubtedly make an unevenness in the maturity at harvest.

ROTATION LEASES.

[National Crop Improvement Service.]

There is nothing which endangers America so much today as our very much abused farm tenant system. We ought to have something in every lease which will protect land and protect the people as well as posterity. Year to year tenants who scratch a little and move away, should be compelled to settle down and landlords should be be compelled to make a time rotation lease. It is easy to talk about compelling this and compelling that, but we mostly are a very sloppy people whose motto is "the easiest way is the best."

If we let our soil run down, our whole structure will fail. In order to obtain a larger yield of grain, this soil must be fed. The colleges and experiment stations beyond the Mississippi river are entirely too timid about preaching soil conservation. In fact, all of us are rather prone to tell our audience what we think they would rather hear.

KILL THE WEEDS.

[National Crop Improvement Service.]

"Spring plowing, or disking as soon as the weed seeds have germinated, is usually a profitable practice. Where small grain is to be sown, the sowing should be done soon after plowing; but where corn, potatoes, or the sorghums are to be grown, there is often a period of several weeks between the time of the germination of the weed seeds and the time when the season is sufficiently advanced to plant the crop. This period should be utilized as far as possible for the destruction of weeds before the crop is planted. Much labor in keeping the crop free from weeds during its growing period can thus be saved."—E. C. Chilcott, agriculturist in charge, Washington, D. C.

INTENTIONAL DUPLICATE EXPOSURE

"Madam," said the agent, addressing the lady who had opened the door in answer to his ring, "I am introducing the greatest household invention of the twentieth century. It is a combination tool in compact form, comprising a can opener, a corkscrew, a paper cutter, a bodkin, a nutpick and a shoe buttoner—and the price is only twenty-five cents."

"I haven't any use for it," replied the woman. "I bought a five-cent package of hairpins yesterday."

Long Drawn Out.

"There is apparently no end to a 'best seller.'"

"What do you mean by that?"

"First it appears as a serial in a magazine."

"Yes."

"Then it is published in book form."

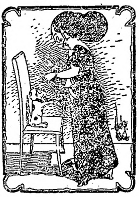
"Exactly."

"Then it is dramatized on the stage."

"Naturally."

"And finally flickers through some thousands of feet of film as a movie."

ENVIOUS



She—He acts almost human, doesn't he?

He—Yes, I would, too, if you made as much of me.

A Man of Iron.

A movie star is often spied
Whom nothing ever rattles;
A dozen times, at least, he's died
In motion picture battles.

As You Might Say.

"Jibway bought a dollar watch and tried to go to sleep with it under his pillow."

"What happened?"

"After being kept awake by it for an hour and a half, he got up and smashed the thing to smithereens."

"Ah! A new form of tick eradication."

A Welcome Change.

"Well, I am certainly glad to be at home again," said the man who had been away for three weeks.

"Are you really, dear?" queried his wife.

"I am sure," he rejoined. "Why, even your angel cake tastes heavenly to me."

Help Wanted.

Husband—When they were divorced the judge handed her a document giving her control of her child.

Wife—What was the judge's name?

Husband—Why do you wish to know?

Wife—I want to hunt him up and see if I can't get a document that will give us control of our cook.

Where She Scores.

Doubleday—No man living admires his wife's taste in neckties.

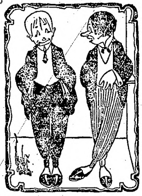
Mrs. Doubleday—Perhaps not; but he always approves her choice of a husband.

Feminine Ideas.

"What is a 'Bachelor of Arts,' mamma?" asked little Jessica.

"Any bachelor who is trying to dodge the responsibilities of a wife," replied the wise mother.

FICKLE



Cholly—So she threw you over?

Willie—Yes. Said she thought I wouldn't be the kind that would stick.

Cholly—Why didn't she recommend you to some other girl who wanted that kind?

That and That.

A wise old owl lived in an oak;
The more he saw, the less he spoke;
The less he spoke, the more he heard;
Why can't we all be like that bird?

Feminine Wisdom.

Miss Young—In selecting a husband, what would you consider first?

Miss Elderly—A proposal.

Poetic Realism.

"Yes; I have pictured my sweetheart in my verses."

"Oh! does she limp?"

mouth indicates [illegible] that he will have good fortune through his individual efforts. Whatever walk in life he chooses, he will be successful. To a woman it indicates that she will have plenty of money and be very much beloved. A mole on the left side of the mouth indicates for both men and women a commonplace life, one in which neither good nor ill fortune will predominate.

When Sponges Are "Dead."

Sponges when brought to the surface are black and slimy, filled with water and animal matter called "gurry." Several days are required for the "gurry" to run off, when the sponges are dead. They are then squeezed out with the hands and strung on lengths of coarse twine, to be sold at auction by weight. The largest market is at Key West.

First Successful Plant Nursery.

The first successful plant nursery in America was that of Robert Prince of Long Island and was continued for five generations, or a period of 130 years, by members of the Prince family. It was started in 1725, visited by President George Washington and in 1796 protected by the British General Howe with an armed guard.

Niagara at Night.

Generally speaking, it is hard to improve on nature, but those who have seen Niagara falls lighted at night by electricity are agreed that the effect is far more impressive and beautiful than anything that daylight affords. The lights are of more than a hundred million candle power.—Youth's Companion.

Something to Worry About.

You better stop yo' growlin' w'en you ain't got nuttin' 'tall ter growl 'bout. Des s'pose dat you wuz rich an' had ter pay de income tax; or dat you couldn't sleep w'en night come fer thinkin' dat a yethquake mought swaller de bank, wid all yo' money in it!—Br'er Williams, in Atlanta Constitution.

How to Choose Calico.

In choosing calico note well the appearance of the selvedge and remember that the straighter and more even the selvedge the better the quality of the calico. White calico owes its purity to bleaching powders, which have a destructive effect on the fibers of the calico.

The Owl Valuable to the Farm.

Do you know a monkeyface owl when you see one? Perhaps you know it as the barn owl. Anyhow, if you see one hanging around don't kill it. It's worth six or eight cats to you on the farm or suburban place, according to the state biologist of Washington.

Good Advice.

"The doctor says he will let me know in a week whether I am going to live or not." "And what does he expect you to do in the meantime?" "He told me to take a complete rest and above all not to worry about anything."—Life.

Three Classes of Soap.

While there are many kinds of soaps it is said that those commonly used may be divided into three classes. The first class comprises fine white soaps and scented soaps, the second class the coarse household soaps, and the third class the soft soaps.

No Joke.

We imagine that the women always fall for a line of hot-air talk. But just watch how any man under ninety-five will swell with pride when a girl tells him that he is a regular devil.—Milwaukee Sentinel.

Getting an Early Start.

"Why won't you marry me?" "Because I don't love you." "Why need that matter? We'd simply have a five-year start on half the people in our set."—Louisville Courier-Journal.

Cruel.

The Author—"This, sir, is a true child of my brain." The Editor—"It's a good subject, but you've mistreated it as though it was a stepchild."—Puck.

An Anomaly.

Be more like the scissors sharpening man. He's often happy though his life is a grind and he always finds things dull.

Wealth.

The loss of wealth is loss of dirt, as sages in all times assert; the happy man's without a shirt.—John Heywood.

Brittle Finger Nails.

Brittle finger nails can be cured by soaking them frequently in strong alum solutions.

Tossed Away.

Sometimes the last card isn't especially valuable.—Kansas City Journal.

And She Believes It.

It flatters a girl to tell her that she does not like flattery.—Deseret News.

CULL OUT ALL THE LOAFERS

Big Increase in Profits Made by Farmer Who Weeded Out All Unprofitable Animals.

Merely by culling out the unprofitable cows one farmer reports that he was able to raise the milk receipts per cow from $89 one year to $180 the next, and the live-stock receipts per $100 worth of feed from $76 to $176. This made it possible for the farmer to increase the profit $1,500 on his farm in addition to what the farm contributed toward the living and after 5 per cent interest on the investment had been subtracted. The year previous the farmer had lost money.

HOME TOWN HELPS

WHEN LAYING OUT A CITY

Proper Planning, by Adding to Its Appearance, Bound to Bring Desirable Financial Results.

Are we laying out, for instance, a new suburb? Is it not better and more businesslike, and more likely to produce adequate financial results if we determine beforehand which of the streets are likely to become great traffic thoroughfares and to give them ample width of broad macadam of paved surface, providing only in the residential streets sufficient paved surface to allow two tradesmen's carts to pass, and laying down the remainder in trees and grass, in a way which will save the rate-payers large sums and at the same time make the street or boulevard a more desirable place in which to live?

Such instances could be multiplied a thousandfold. The results, so far of practical city planning will convince anyone that the scope, influence and finance of city planning are so much a subject for the earnest consideration of every man who is a good citizen and loves his city and his fellow citizens, that none can afford to neglect it. Nay, more than this, any city which does neglect this great subject, cannot hope to continue in these go-ahead days, to compete with other cities and towns which are wide awake to take full advantage of the opportunities for advancement and betterment which it provides.—Exchange.

COMBINING CITY AND COUNTY

By Cutting Expenses There Would Be More Money to Spend on Public Improvements.

Mayor Campbell of Houston has started a discussion of a proposal to combine city and county governments, and eliminate one set of officers. The writer advocated that several years ago, but plans to reduce the expense of government were not then as much in favor as plans to increase it.

There is no sound reason why a commissioners' court and a city commission should both be required for legislative service, nor is there any apparent need for the double service of a city and a county police force. Many other duplications could be suggested equally wasteful.

The city and county of St. Louis are identical. New York and London are under the same single system of government. So it cannot be urged that the plan will not fit a city.

The truth is that the American system seems to be based on a demand that provision shall be made for every man to hold an office who wants one. It has multiplied offices to a degree unknown in any other country, and has, as a result, driven the cost of government to a figure which exceeds that of any other country in the world, if the military branch is excluded from the comparison.—Waco (Tex.) News.

Modernized Education.

Fond Papa—"Well, son, what did you learn in school today?" Son—"Aw, not much, dad. We hadda couple of two-reelers in history, a three reel travelogue in geography, and a split-reel nature study. They useta give a Wild West pitcher once in a while, but they don't do it no more."—Widow.

Thawing Pipes With Electricity.

Electricity is the only agent which will thaw frozen water pipes without their being dug up. With the action of electricity the pipe can be easily thawed in a short time, the passage of current through the pipe heating it sufficiently to melt the ice.

Protecting Himself.

Actor—"I say, old man, I wish you'd advance me $5 and take it out of my first week's salary." Manager—"But, my dear fellow, suppose it happened that I couldn't pay your first week's salary, where would I be?"—Boston Transcript.

Neatly Trapped.

"Hubby, you know that letter I said I gave you to mail?" "Yes, my dear; I assure you I mailed it." "No, you didn't. I didn't give it to you. I thought I gave it to you, but I gave it to father."—Louisville Courier-Journal.

CIVIL ENGINEER

Copyright by Fleming H. Revell Company

CHAPTER XI—Meade has gone to the anch of Winters, a college friend, and here taken stock of himself and the terible responsibility he has assumed to ave his father's name from dishonor. He akes the new start as an unknown.

CHAPTER XII—Helen and Rodney conpire to save Meade from his own false onfession in spite of himself. Shurtliff as been employed by the colonel and Helen, thinking he knows the truth, sets ut to win his confidence.

CHAPTER XIII—Meade gains the confidence of Vandeventer, his chief, though e refuses to tell his own story. He is romoted.

CHAPTER XIV — Unexpected rains hreaten the dam before the spillway is shape to carry off surplus water.

CHAPTER XV—Continued rains force andeventer and his men into an almost uperhuman fight to prevent the flood wars from carrying away the dam. Disaster is imminent though every emergency eans known to engineering skill is used.

CHAPTER XVI—Helen gains Shurtliff's onfidence but is unable to get any admison from him. Meade has dropped out f sight and the only remembrance she as of him is the flowers that come to her aily from a sender unnamed.

CHAPTER XVII—A viaduct and bridge, ust built by the colonel's company, are n the flood's path if the dam breaks. The olonel, with Helen and Rodney, and othr officials of the company, are there on visit of inspection.

CHAPTER XVIII—An attempt to force confession from Shurtliff is unsuccessul.

CHAPTER XIX—Helen, Rodney and Vinters watch from the mesa above the rantic efforts to save the dam. They see hree men scrambling to a hogback that uts out into the reservoir, evidently to ry some new scheme to save the dam. Helen finally recognizes one of them as Meade.

From where they stood, high up on he roof of the world, they were spectators of a great battle, witnesses of terrible contest, in which herculean ffort, desperate courage, human will, ll exerted to the limit, finally degenerated into blind, mechanical habit f continuous and frenzied endeavor. he spirit of reckless continuance had ot into them and moved them to the mpossible. As men in a battle charge o on even with wounds enough to kill hem in ordinary circumstances, as soliers at Winchester, though shot in the eart, actually struggled after Sheridan until they fell, or even as a comnon horse may so be imbued with lind intensity of determination that e gallops on until he drops dead, these men gave their all in unmatchable persistence.

"They'd better get off that dam," said Rodney. "When it once fails it'll go ith a rush and then it'll be too late."

"Look at them. They're not going o get off," said Winters. "They're oing down with it. Fools, God bless m!" he shouted, throwing up his rms in exultation over manhood and ourage and determination.

"Perhaps you had better go back, Miss Illingworth," said Rodney, thinking of the horror she might witness at ny moment.

"I wouldn't be elsewhere for the orld," said the brave girl, white but ith firm lips—she was made of the ame stuff as the fighting men, it eemed—"even if he were there, fighting that great battle, I should wait to ee the end."

"We're not the only people in this ilderness. Look yonder!" cried Winters.

He pointed down through the ceaseless rain toward the lower edge of the esa. There, far below him, were hree sodden figures. The water in the ake had flooded the slope of the hill, nd on that side it was lapping the ase of the cliff. The trail had, of ourse, been covered, and there was no ay of progress except by taking adantage of the broken rock at the foot f the cliff, which here and there still ood above the water. It was a place here men could only pass by carefully hoosing their way and calculating the istance of the next point toward hich to leap. These three were moving like madmen, splashing through he water, hurling themselves from ock to rock, falling against the wall, lutching a tree or shrub, slipping into he lake, saving themselves from rowning apparently only by the caprice of complacent fortune, which hey were trying to the utmost limit.

One man carried a miner's pick, a pade and a surveyor's range pole, the other another spade and two long takes which looked like the separate egs of a tripod. The bareheaded man, who had thrown his rubber coat down n the reddish-yellow water, carried a good-sized oilskin bag. He was the most hurried of the three. He ran some distance in front of the others. They noticed how carefully he sought to protect the bag. When he slipped or seemed about to fall, he always thrust it frantically away from the rock with outstretched arm.

What the three men would be at of course no one knew. It was obvious that they were in a desperate hurry and that the thing in the bag must be carefully carried. Naturally the watchers connected the men with the dam builders. They were dressed as the men engaged in such labor would be dressed. The pick, the spades and the pole and stakes bore out that conclusion.

"What's in the bag?" asked the woman.

"He carries it as though it might be gold or diamonds," said Winters.

Rodney shook his head. Suddenly he divined the reason for the extreme care with which the bag was carried. The men were immediately below the three watchers now. He could make out pretty well what was the size and shape of the objects that bulged the waterproof bag.

"I have it," he shouted. "Dynamite!"

"What for?"

Rodney shook his head again. The man in front was in plain view. He was a tall figure, his face was heavily bearded. From the angle at which they saw him it was impossible to recognize him, nor was he in his frantic progress assuming the usual attitude and bearing of a man under ordinary conditions which sometimes betray him to those who know him well. Nor could Helen Illingworth with her trembling hands focus the glass, which she took from Rodney before the struggling adventurers had passed; and yet there was something in the figure below that made her heart beat faster.

She pressed her hand to the wet garments over her heart and stared. Suddenly Rodney raised his voice and shouted at the very top of it. Winters joined in, and even Helen Illingworth found herself screaming. The three men below were not more than five or six hundred feet away, but evidently they could not possibly hear in that tumult of nature. No voices would carry through any such rain and wind. They were too intent on their paths and on what they had to do to look upward. They rounded the shoulder of the mesa and disappeared in the pines at its feet.

The three on the top looked at each other.

"The dam still holds," said Rodney, quite unsuspecting what was in the woman's heart.

Even as he spoke, Helen Illingworth turned away. She ran heavily in her sodden garments along the broken mesa top past the house to the upper edge. There below her were the three men just emerging from the fringe of trees. Rounding the end of the mesa, they had at last struck firmer ground. Helen Illingworth could see them through the pines on the old trail. The going was bad enough, but it was nothing compared to what they had passed over and presently they burst out of the woods and ran along the greasy, well-rounded hogback that divided the valley from the ravine.

The woman had no idea what was toward, what was their purpose. She could only stare and stare at the rapidly moving far-off figure indomitably in the lead, and the others following after. There Winters joined her.

"Rodney sent me to look after you; he feels that he must stay back and watch the dam for his paper."

"Look," said Helen, pointing far down. The men halted at the very narrowest part of the hogback. They were clustered together. The bag lay on the ground behind them. One man bent over it, evidently opening it. Another man swung the shovel viciously, the third grabbed the pick. Winters had been too far removed from engineering even yet to figure out what was toward. They could only watch and wonder.

CHAPTER XX.

The Victors.

Meade knew that they were fighting a losing battle. Every one of the higher grade men knew it also. The spillway was entirely inadequate, but it suddenly flashed into his mind, with that consciousness of the hopelessness of the struggle, that perhaps there was another way to discharge the flood. The same idea might have come to any other of the more intelligent of the men from Vandeventer down if they had taken a moment for reflection. If they had not been so frantically, so frightfully engrossed in their present puny but gallant efforts to save the dam, they certainly would have remembered. That the possibility came to Meade rather than to any of the others was perhaps due to the fact that he had noted the situation later and had studied the conditions more recently. Those solitary rambles of his, those careful inspections of the terrain of the valley, had been made long after the original surveys and the results of his observations were still fresh in his mind.

The water was rising so rapidly since the cloudburst and he saw the inevitableness of the failure so clearly that he did not dare to waste time to seek up Vandeventer, tell him his plan, and get his permission. Every second was of the utmost value. When the thought came, he acted instantly. He was in the position of the commander of a small force to whom is suddenly presented the bare possibility of wresting victory from defeat by some splendidly daring and unforeseen undertaking. And he was the man to seize such a possibility and make the most of it.

He had endeared himself to some of the men and the respect in which he was held by Vandeventer was shared by the others. When he called two of the most capable of the workmen, a big, burly Irishman and a stout little Italian, to follow him, they did it without a moment's hesitation.

"The rest of you keep on here," he shouted as he left the gang. "Murphy and Funaro, come with me. Keep it up; I think I know a way to help," he yelled back through the rain as he scrambled off the dam up the rocks to the spillway. It was not his fault that they could not hear and could not understand.

The water was rushing through the spillway about knee deep, and the three men plunging forward through it had difficulty in keeping their footing on the broken, rocky bottom. When they reached the other side, Meade shouted above the storm:

"Murphy, bring your pick and shovel; take that iron range-pole, too. Here, Funaro, you take your shovel and these."

As he spoke he ran into the office shack and wrecked a transit tripod, ruthlessly separating the legs from one another by main force and pitching two of them into the little Italian's outstretched arms.

Without a question, both men complied with his directions. In a huge crevice, almost a small cave, in the spur of the mesa which overhung the east end of the dam the explosives were stored. The dynamite was kept in oilskin bags, the detonating caps in waterproof boxes. There were sixteen sticks or cartridges in each bag. Each stick was an inch and a half in diameter and eight inches long. One bagful should be ample. Indeed, if that did not do the work, the attempt would fail.

The men waited while Meade selected a bag of dynamite, a box of detonators, and a package of fuses. It was a cardinal rule that dynamite cartridges and detonating caps should never be carried by the same person, because the combination so greatly increased the risk of premature explosion. The fulminate of mercury in the detonators was very volatile, highly explosive and immensely destructive, considering its size. One such cap could blow off a man's hand, or even his head, and in its explosion might detonate the dynamite. Hence the separation when being carried.

Meade decided to take that risk. He knew how perilous was the undertaking, how liable he was in his hurry to fall against the rocks, slippery and half submerged in that pouring rain. He knew what the consequences of such a fall would be. He would center all risks in himself. He thrust the box of detonators in his pocket, the package of fuses inside his flannel shirt, and carried the dynamite bag in his hand. He would need his free hand to protect himself, so all the tools were carried by the other men.

The little Italian shook his head as he noted these preparations. He happened to be one of the explosive force, those whose duty it was to do the blasting. In his practical way he knew a great deal about the properties and possibilities of usefulness of the dynamite. Meade's purpose was obvious, even to Murphy, who was only a laborer, though where he proposed to work neither man had any idea at all.

"Dynamita no work in zis weather," said Funaro impressively.

"Probably not," answered Meade, hurrying his preparations, "but it's our only chance."

"Give me ze caps," urged the Italian gallantly.

"No, I'll take both."

"It ees danger."

"Yes, but come on."

Meade, wasting no more words, sprang at what was left of the trail, and the two men gallantly followed him. The hogback at which he was aiming was perhaps a little more than two miles from the dam. On the ordinary trail and prepared for the run, he could have managed it in fifteen minutes; as it was, they made it in thirty. The extreme possibility of the life of the dam seemed to Meade not much greater. He went in the lead, and by his direction the others kept some distance behind him.

"If I fall and explode this dynamite, there's no need of all three of us being blown up," he had said, and it was no reflection on their courage that they complied with his direction.

Indeed a stern command was necessary to keep the two men back. They had caught something of the gallant spirit of the engineer, and the big Irishman and the little Italian were as eager as he. Helped by a few hasty words as they ran, they had both of them learned what he would be at. They both realized that they were the forlorn hope, that if they could not save the dam nobody and nothing could. And there was a trace of the age-long rivalry between the Celt and the Roman. The scion of the legionary and the son of the barbarian who had fought together in the dawn of history vied with each other then. Again and again Meade had to order them back. He was keenly sensible of his danger. He knew that if he fell, if the dynamite struck the ground violently, it might explode. He knew that the unstable fulminate of mercury in the detonators might go off at any time—perhaps that was the greater danger—but he never checked his pace or hesitated in a leap or sought an easy way for a second. His soul was rising and his heart was beating as they had never risen or beaten in his life. And the hearts of his men beat with his own.

His Soul Was Rising and His Heart Was Beating—

He knew, of course, if the dam went out the railroad, the bridge, the town, the citizens, the women and children, and everything and everybody would go. If he could save them, his act might be set off against the loss of the International. But whether that were true or not, whatever the consequences to him, he was bound to save them. The weight of every man, the weight of every woman, the weight of every child in the valley, the weight of all the business enterprises of the town, the weight of the great viaduct of steel, the weight of the huge dam itself, was on his shoulders as he ran. He carried the burden lightly, as Atlas might have upborne the world with laughter. For, despite his determination and haste, he had in his heart the great joy that comes when men attempt grandly and dare greatly for their fellow-men. If he could only by and by see his hopes justified by success, his happiness would be complete.

And there were thoughts personal as well as general. If he died, whether successful or not, men would tell about his endeavor. She would hear. It came to him afterward, when he learned how she had looked down upon him as he ran, that he had somehow felt her presence, not a presence impelling him to look up, but a presence driving him on. He lost his hat, he tore off his long coat and threw it aside as he plunged on with his precious bag in his hand. He did not dare to look at his watch, he did not stop for anything, but it seemed that he must have spent hours in that mad scramble over the water-covered rocks. He heaved a deep breath of relief when he rounded the mesa and struck the trail. Bad as was the going, it was nothing to what they had passed over.

Presently he broke out into the open slope and there before him was the rounded curve of the hogback, to gain which he had risked so much. Were they in time? Yes, the water in the lake was not flowing, it was only rising. Evidently the dam still held. He ran along it till he reached the narrowest part of it, twenty feet wide between water-covered valley and sharply descending ravine. The shortest separation between Picket Wire and the Kicking Horse! The water in the lake was within three feet of the crest. The rain was coming down steadily. He could realize by the water level where he stood that it must be lapping the top of the dam now, or a little above it. He had five minutes—ten at most. He was still in time. The thoughts came to him as he ran. And as he saw the place again he made his instant plan.

He laid the dynamite down just as Murphy and Funaro reached him and stood panting, their heavy breathing, the sweat mingling with the rain in their wet faces, evidencing their exhaustion. From Murphy, who had been the faster, Meade took the two tripod legs, stout oak staves about an inch and a half thick, with sharp metal points. He jammed them down into the ground about five feet from the edge of the Kicking Horse ravine and about fifteen feet apart.

"Holes, there," he shouted, "deep enough for five cartridges."

Funaro nodded. He knew exactly what to do. Murphy had often seen the explosive gang at work. He was quick-witted and he had only to follow the Italian's actions. The work was simple. Seizing their spades, the two men cut into the sod, using the pick to dislodge small bowlders and break up the earth. The soil was light and porous, and it had been well soaked by the rain. After they had made an excavation about two feet deep, they laid aside their shovels, and with the iron range pole as a starter and the bigger tripod stakes to follow, they made two deep holes in the ground, forcing the pole and then the stake into the earth, which the continuing rain tended to soften more and more. They made these holes about four feet deep below the excavation, driving in and twisting and churning the stakes by main strength.

They could by no means have accomplished this save for the softening assistance of the rain and the furious energy they applied. They had been working since four in the morning at the dam, they had made that difficult run at headlong speed, yet they labored like men possessed. They even wasted breath to call challengingly and provokingly and to set forth their progress each to the other. In almost less time than it takes to tell it, they had completed the holes and so informed the engineer triumphantly.

Meade, as usual, had reserved to himself the more dangerous, if less arduous task. Covering himself with big Murphy's discarded slicker, which fell over him like a shelter tent as he knelt down, he opened the box of detonators, selected one, and attached the fuse in position carefully. Then he unfolded the paper about one of the cartridges and placed the detonator, wrapping the paper around it thereafter. He prepared two cartridges this way with the greatest care.

The men rapidly but carefully cut slits in the covering of the cartridges, and lowered four cartridges down each hole, forcing them gently into place with the butt ends of the tripod stakes and compressing them so that they filled the holes completely. Then Meade placed his two prepared sticks with the detonators on top of the other four. He cut the fuse to the proper length in each case, and, keeping it carefully covered with the raincoat, he held it while the others filled in the holes and the excavations and carefully tamped down the earth. All that remained was the lighting of the fuse. And then? Would the dynamite go off? With fuses it was uncertain in its action at best, and although these fuses were supposed to be so prepared as to be independent of weather conditions, more often than not rain spoiled a blast. If this blast failed it was good-by dam—good-by everything.

Meade drew out from the pocket of his flannel shirt a box of matches. He had to light the farther cartridge fuse, then run fifteen feet and light the nearer one, and then make his escape. He had made the nearer fuse a little shorter so as to secure a simultaneous explosion if possible.

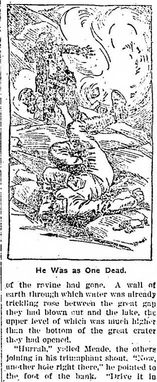
Tony Funaro now interposed gallantly.

"Giva me da light," he demanded, extending his hand.

"G'wan wid ye," shouted the big Irishman eagerly; "lemme do it, sor."

"Stand back, both of you," cried Meade, succeeding after some trouble in striking a match.

He had cut off a shorter length of fuse for a torch, the better to carry the fire from one blast to another. As it sputtered into flame, he touched the first fuse, then the second, and turned and ran for his life after Murphy and Funaro. They had just got a safe distance away when with a muffled roar the two blasts went off nearly together. When they ran back they saw that two-thirds of the hillock on that side of the ravine had gone. A wall of earth through which water was already trickling rose between the great gap they had blown out and the lake, the upper level of which was much higher than the bottom of the great crater they had opened.



He Was as One Dead.

"Hurrah," yelled Meade, the others joining in his triumphant shout. "Now, another hole right there," he pointed to the foot of the bank. "Drive it in slanting and it will do the job."

"Will the dam be after holdin' yit, sor?" asked Mike Murphy, seizing his pick.

"I hope so, but, for God's sake, hurry."

With two men working, the last hole was completed before Meade was ready. Funaro, indeed, came to his assistance in preparing the cartridge. Presently all was completed. Rejecting the pleas of both men, Meade struck the match, and this time, since there was but one blast to be fired, he touched it directly to the fuse and waited a second to see that it had caught and ran as before.

At a safe distance they drew back and waited. Nothing happened. A few seconds dragged on. They saw no sign of life in the fuse, no light. In spite of the care they had taken, it had got wet. It would not work. The precious moments were dying. They stared agonizingly at the fuse through the rain.

"I'll have to take a look at it," said Meade desperately.

Funaro and Murphy caught him by the arms. They all knew the tremendous risk in a nearer approach. The fuse might be alight still. At any second the flame might flash to the detonator and then— Yet Meade had to go. That charge had to be exploded if he detonated it by hand, he thought desperately, and he had not come so far and worked so hard to fail now.

"Don't go," cried Murphy.

"It ees danger," shouted Funaro.

But Meade shook them off and bade them keep back. What was his danger compared to the issue involved? That last charge had to be exploded. He stepped quickly toward it, and as he did so he threw his eyes up toward the gray, rain-filled heaven in one last appeal.

Did he hear the blind roar, did he see the upbursting masses of sodden earth, was he conscious of the fact that the whole side of the hillock had been blown away, that the last explosion had completed the shattering work of the first—that they had succeeded? Did he mark the whirling water, driven backward at first by the violence of the explosion, returning and rolling in vast mass through the great opening, did he see it plunging down the slope, through the trees and bushes, and pour thunderously into the bed of the ravine? Did he see the tremendous rush of the water from the great lake that man had created tear earth from earth, and ever widen and deepen the opening as it crashed in a foaming, terrible, red cataract through the outlet, striking down [illegible] trees, roaring, boiling wildly to the bottom of the gorge far below?

No, he saw nothing. Broken, beaten down by a huge bowlder that had been thrown upward by the explosion and had struck him on the breast, and lying battered under a rain of smaller stones and earth, he was as one dead.

"By heavens!" cried Winters in great excitement on the crest of the hill, "he's done it. He's saved the dam; that's a man!"

"Don't you know him?" screamed Helen Illingworth in his ear.

"No."

"Meade!"

Winters caught her by the arm.

"He's dead," she cried high and shrill, "but he saved the dam and the bridge and the town. He's made atonement."

"Yes, yes; don't faint," cried Winters.

"Faint! I'm going to him."

"How?"

"The nearest way," screamed the woman, letting herself down over the cliff wall to the broken rocks, by which only the hardy could reach the lower level.

* * * * * * * *

What of the dam below in the valley?

"Hold it, men, hold it; for God's sake, hold it," shouted Vandeventer, rising from his crouching position against the palisade to resume it instantly he had spoken. "Keep it up. If it goes down, let's go down with it. Hang on—hang on! We'll hold it. We aren't beat yet."

Broken words, oaths, protestations, curses, cheers, expletives in strange languages from the polyglot mob of men burst forth. Even cowards had been turned into heroes because they had fought by the side of men. Here and there a man not weaker physically, perhaps, but less resolute, less spiritually consecrated, less divinely obsessed, dropped out of the rank that pitted itself in furious, futile, but sublime fury against the wavering wall. Some of them fell exhausted and lay still. Some had fainted and some of them were half dead. A few here and there sank down on the trampled, muddy embankment and buried their heads in their hands, sobbing hysterically. But most still blind, mad, sublime, held on. And the palisade did not fall. It did not bend back any farther.

The throb that told of the tremendous pressure of the waves, the quiver that experience could feel the prelude to failure, began to die away, to stop. What did it mean? The thunder grew still, the rain diminished, it ceased, the clouds broke. Some great hand, as of God, swiftly tore the black vault of the heavens apart. Faint light began to glow over the sodden land. Through the rift they saw dimly one great peak of mighty range. What had happened?

"Here," said Vandeventer.

How white he looked, how haggard, streaks of gray in his black hair that had not been there before, but his eyes were blazing. He was still the indomitable chief of the Spartan band. The nearest men gave him a hand. He clambered up to his former vantage point on top of the biggest box of the stockade and stared down. The rise of the water had stopped! He could not believe it, yet it was true. The rain had ceased again, but by every natural law the drainage from the hills would continue for some time in full volume. Yes, by all rights the dam was doomed. The water still trickled through the palisades in many small streams. That had been a gallant effort they had made, even if a vain one.

For ten minutes he stood silent, exhausted. Then he saw. The water was not rising. No, it was falling; only a trifle, but enough. Presently it had stopped filtering through the revetment. He looked back. Not a drop ran on the other side of the palisade. Vandeventer knew that the water must be discharging somewhere. The lake must have broken through somewhere. He only needed that hint to recall the hogback, and then Meade. He saw it all now.

"We've won, the dam's saved," he cried greatly to the men who stood back of the palisade staring at him. "Roberts has blown up the hogback. The water's falling. See for yourselves."

Every man sprang up the palisade. Someone laughed and then someone raised a cheer, and those mud-covered, sodden, worn-out men, who had been about to die, saluted in heroic acclaim him who had led them to victory and by implication him who had made that triumph possible.

B. Hruby of Erie was a Goodridge visitor Sunday.

G. C. Gulrud was a county seat visitor Wednesday.

Miss Evelyn McLeod was a visitor in Thief River Falls, Wednesday.

Mrs. R. H. McDonald was a Thief River Falls visitor Wednesday.

Andy Ryan was a business visitor at Teief River Falls, Wednesday.

Dr. Froelich of Thief River Falls was a Goodridge visitor Sunday.

Don't forget the Japanese Social and School Exhibit at the school house Friday evening.

Charley Nason of Thief River Falls was a business visitor in town Wednesday.

Steve Singer of Kratka was attending to business matters in town the fore part of the week.

Peter C. Wold attended a commissioners meeting in Thief River Falls Tuesday.

Lets all go to the Japanese Social and School Exhibit at the school house Friday evening.

Mr. and Mrs. A. O. Halvorson and little son, and Mrs. Ferdinandsen autoed to Thief River Falls Saturday afternoon.

Julius Anderson returned Monday evening to Rosewood, where he is working, after being up here a few days.

The Ladies Aid will meet with Mrs. Ole Lund and Mrs. Ole Wiseth at the home of Mrs. Ole Wiseth, Thursday May 25th. Everybody Welcome.

I will stand for service on the old Lysbakken place my black graded stallion, $5.00 standing colt,

E. Jensen, Owner.

Mr. and Mrs. C. W. Nelson and several others from Mavie attended the show and dance here Saturday evening.

Nick Bundhund and J. P. Jensen, cashiers of the local banking institutions, left Tuesday evening for Crookston to attend a bankers convention.

The base ball dance given here Saturday evening was well attended. Excellent music was furnished by the Grygla orchestra, and everyone reports that they had a fine time.

Olson Bros. arrived here Tuesday evening with a small Mogul gas tractor which they shipped in from Argyle. They put it to work right away breakon their farm near Esplee.

Martin Benson of Germantown was in town Wednesday afternoon. He was on his way to his store at Malcolm with his tractor, behind which was hitched three loaded wagons, a manure spreader and a plow.

Arthur Tvedt arrived home from Thief River Falls having been excused from his high school studies to work at raising garden. Nearly all the boys in that institution have been let out for that purpose.

P. C. Halvorson made a flying trip to Thief River Falls with his youngest boy who appeared to be quite sick, but upon examination by the doctor it was found to be nothing serious. Harry Halverson accompanied them.

A caterpillar gas tractor arrived here Monday evening for Louis Larson, who recently moved onto the O. H. Speten farm. This is the first one of its kind in this section and it looks as if it might be alright. Mr Larson intends to use the tractor in place of horses. While turning onto the grade half mile north of town the tractor turned completely over, breaking a big casting. He took it to Thief River Falls where he had it welded.

Tessum Seed Grain and Supply Co.

Goodridge.

L. T. Lathrop arrived here last Thursday morning from Forest Lake, Minn., for a short visit at the Tvedt home. He and Palmer were old schoolmates. He left again Tuesday evening. He was accompanied to Thief River Falls by Carl Christianson, Alvin Rottke, Palmer and Chester Tvedt, making the trip in the formers car.

Noticc To The Public

All owners of live stock are hereby notified to keep their stock from running at large within the streets within the Village. Stock found at large on the streets will be taken up and the owner shall pay the penalty provided in the case.

By order, Village Council.

Grow Staple Foods

Says A. D. Wilson:

Produce the largest possible amount of grains and corn, and such root crops as may be stored without danger of serious damage, including foodstuffs which may be canned, preserved or dried, such as peas, beans, corn and all sorts of fruits. That is the special message sent out this week by A. D. Wilson, chairman of the state committee on food production and conservation, to Minnesota's crop producers and gardeners. To grow grains, corn and the other crops mentioned, is the first patriotic duty of the people on the land. To do so may be to save the nation in the most perilous crisis of its history.

PRICES WILL BE HIGH.

That prices for all foodstuffs will continue high is the conviction of the state subcommittee on markets. This conviction is based on the fact that not less than 40,000,000 men have been withdrawn from productive labor in the world to carry on the war, and that the crops in parts of the world not affected by the war are far below normal, Argentine, which is a great grain-exporting nation, has suffered so seriously that it has placed an embargo on the export of grains to avert a local famine. It is already well known that the winter wheat crop of the United States will be far below normal. The grain supply is, therefore, sure not to be sufficient to meet the world's need. Then price of grains will be high and drive people to other foodstuffs, which will keep the price of such foodstuffs also at an abnormal figure.

Business judgement, as well as patriotism in the eyes of the state committee, therefore, should prompt the planting of every square foot of ground available, and the utmost care in growing crops throughout the season.

COMMITTEE READY TO HELP.

The state's committee on food production and conservation is organized to help any who may call upon it. It has at its back all the forces of college the state, including the of agricultural and the various experiment stations. Through the college may be had bulletins relating to the various problems of agriculture including one just issued on "A Garden for Every Home." These bulletins may be had free by addressing Office of Publications, University Farm, St. Paul, Minn.

HIGHLANDING NEWS

Mrs. Elo Sanders, Mrs. Lohre and little son and Miss Ella Olson were pleasantly entertained by Miss Arvel Heggestuen last Sunday.

Mrs. Mabel Larson and children Elmer and Helen left for Iowa Monday afternoon where Mrs. Larson will visit with her grandmother Mrs. Grove this summer.

Mrs. Ole Nelson and children and Mrs. Christ Thoreson and children visited with Mrs. Sever Nelson Sunday.

Miss Ragnild Geving spent the week end with he parents.

The farmers around here are purchasing automobiles "To beat the ban" Martin Thorson, John Engen and Elo Sanders ordered Ford cars last week.

S. Nelson was a business caller in Highlanding Monday.

Card Of Thanks.

I wish to thank the firemen and also the people who helped in subduing the fire at the show Monday evening. But I'm more thankful that no one was injured and wish to say that I will gladly refund your money if you will kindly call at my place of business.

P. P. Palmer.

For Rent.

The Bernt Johnson quarter, the NE¼, of Section 4, Township of Highlanding. About 130 acres under cultivation.

Also other farms for rent,

Inquire at Goodridge State Bank

Stallion.

Will make the following stands with my fullblood Percheron stallion maximus 42170:

C. Elg, Erie, Monday
Edwin Hanson, Tuesday afternoon and Wednesday forenoon.
Ole A. Olsen, Reiner, Thursday
Regon and Yohn Livery barn, Saturday

Why not breed to a good horse and get a colt worth at least $25. to $50.00 more than a colt from a grade or scrub horse when of selling age.

S. Lysbakken.

Northwest Corn Show To Be Held In Saint Paul, Minn.,

December 6 To 15, 1917.

Northwestern bankers are now being furnished with pamphlets giving full details regarding the Third Annual "First National" Corn Show for distribution among their farmer clients. The show will be held in St. Paul, Minnesota, December 6th to 15th, 1917. The growing of more corn and the raising of more live stock is especially desirable at this time. While the increased production of wheat, grains and vegetables of all kinds is imperative to meet the demands of the people, the products and manufactured by-products derived from the corn and cattle industries are absolutely indispensable.

Open competition for entire Northwest

Men and boy corn growers in Minnesota, Western Wisconsin. North and South Dakota, Montana; Washington, Oregon and Idaho are invited to compete in contests in connection with this corn show, which is held under the auspices of the First Nationa. Bank and Northwestern Trust Company of St. Paul and bankers of the Northwest. The territory has been divided into thirty-four districts. Equitable competition prevails for individual district contestants so far as soil and climatic conditions are concerned.

One hundred and thirty-six silver and "goldyn" bronze loving cups will be awarded as prizes. A first and second prize for men and a first and second prize for boys will be awarded in each district. Individual exhibits will consist of ten ears of any variety of Indian corn.

No Entry Fee.

No entry fee will be charged contestants for entering corn. Contestants must grow their corn in a field of one acre or more. The grower is at liberty to drill or check the corn, to cultivate and fertilize as he may think best. Exhibits will be returned to owners where request is made that this be done at the time of making entry. Men recognized as national authorities on corn will judge exhibits. The corn entered for prizes from each district will be judged by what the judges consider to be a recognized standard for any variety of corn raised in that particular district. Average size, productiveness, breed type and general appearance will be the principal governing features.

Summons.

STATE OF MINNESOTA, County of Pennington.

CITY OF THIEF RIVER FALLS.
Municipal Court

Goodridge State Bank, a corporation,

Plaintiff

vs

I. A. Zimny,

Defendant

THE STATE OF MINNESOTA, To any Police Officer of said City, to the Sheriff or any Constable of said County

You are hereby commanded to summon I. A. Zimny if he shall be found within the County of Pennington, to be and appear before the Municipal Court of the City of Thief River Falls, at a term thereof to be holden on the 9th day of June A. D. 1917, at the hour of 10:00 o'clock in the forenoon, and answer to Goodridge State Bank, a corporation, in a Civil Action, whose complaint is on file in said Court and have you then and there this writ.

WITNESS THE HONORABLE N. W. TARRANT, Municipal Judge, this 15th day of May A. D. 1917.

(SEAL) N. W. Tarrant,
Municipal Judge

HORSE LABOR ON FARMS.

(National Crop Improvement Service.)

On the grain farm the heaviest work for the horses comes in April, May and in August, September and October. The rest of the time there is practically nothing for the horses to do. But enough horses have to be kept during the year to take care of the work during these busy months. When averaged up the horse on the grain farm only works three hours a day. These figures were secured in an investigation by the Minnesota Experiment Station, under the direction of Thomas Cooper, now director of the North Dakota Experiment Station. In this same investigation it was found that when the crops are diversified, the horse labor is better distributed. There is less work for the horses in the seasons that are the busiest on the all-grain farm, and there is work for the horses when there is no work for the horses on the all-grain farm.

Tvedt-Rustad.

On Saturday evening at the German Lutheran parsonage here occurred the marriage of Miss Anna Rustad to Mr. Palmer Tvedt, Rev. Otto Schultz performing the ceremony. Miss Gina Rustad, a sister of the bride acted as bridesmaid, and Mr. Leslie T. Lathrop, a friend of the groom was the best man. The wedding was kept very quiet, not even near relatives of the contracting parties knowing anything about it until quite a little while after the nuptial knot had been tied.

Both parties are well known here, the bride being the daughter of Mrs. Rustad of Erie, and who was for some time in the employ of the Goodridge Mercantile Co. She is a charming young lady, and is liked by all for her genial dispesition. The groom who is the son of A. C. Tvedt, is an enterprising young businessman, being engaged in the lumber and machine business in partnership with his father.

On Saturday evening a few of their friends gathered at their home and played some of the usual jokes on such occasions, also again Sunday night.

Monday evening, six auto loads of young men from the vicinity of Erie came in and gave the newlyweds a serenade on old tin cans and various other musical instruments.

We wish to join their many friends in wishing them a long and happy married life.

Fire At The Grand Theatre.

What might have proved a disasterous fire started at the Grand Theatre here Monday evening while the first reel of The Libertine was being run thru. The hall was filled to its capicity and just about the end of the first reel the film, which was defective got clogged in the machine and instantly caught fire. Mr. Palmer who was operating the machine tried to put out the film, but in vain, for just as he had it under control, a piece of the blazing film fell from the machine, setting fire to six more reels which were on the floor. In an instant the place was ablaze, and then the stampede for the door began, most of the people tried to get down the front stairway, some getting thru the window onto the roof of the butcher shop one or two jumping thru the window clear to the ground. However in all the mad rush and confusion no one was injured which was very fortunate considering the way they were crowded in the door way.

It looked for awhile that the building was doomed, but the prompt action of the part of the fire department and the people saved it. After the smoke had cleared away it was found that the machine and everything in the booth was a total loss, a few chairs in the main hall were badly scorhced. The loss is covered by insurance.

Mr. Palmer was the only one who was injured, the left side of his face and his left hand being scorched considerable as he jumped from the booth thru the flames to safety, but his burns altho painful, are not serious.

Mr. Palmer is undecided as to whether he will start up again or not so in any event it will be quite awhile before we will have another show, as it will take some time before the hall will be in shape again.

Fish Knocks Man Down.

Salina, Kan.—E. A. Hillman of Wakeeney has a sore face, caused by a tussle with a large catfish which he attempted to catch with his hands while swimming. The fish was seen under a log at the edge of the creek apparently asleep. Hillman slipped his hands along the side of the fish and had almost closed his fingers through the gills when his fishship came to life and jumped for liberty. It struck Hillman such a blow in the face that he was thrown off his balance and his face badly lacerated, and then the fish escaped.

CORN CULTIVATION

In Periods of Drought Any Cultivated Crop Can Be Greatly Benefited by Continued Cultivation.

(National Crop Improvement Service.)

It is a debated question whether or not the mulch conserves moisture, but a shallow cultivation surely does kill the weeds and any farmer who is energetic enough to kill the weeds will get the best crops. There is still time to plant barley ahead of your corn. Don't allow an acre to lay vacant this year.

ANTHEM ALMOST COST MAN'S LIFE

Egyptian Bandsmen Lose Music Sadly Needed in Greeting U. S. Consul.

OFFICIALS ALL FUSSED UP

Suggestion of "Marching Through Georgia," as Substitute for "Star-Spangled Banner," Accepted by American Diplomat.

London.—The pomp and ceremony which surrounds the presentation of diplomatic credentials to potentates of Eastern countries by representatives of the United States, or of any other country, have developed many delicate and embarrassing situations. The Eastern mind attaches great importance to ceremonials and to make a favorable impression all diplomats must conduct themselves in strict accordance with precedents.

A story regarding the arrival of Peter Augustus Jay, United States consul and diplomatic agent in Cairo, Egypt, has reached London through Englishmen who have made Jay's acquaintance.

It seems that the ceremony coincident to the presentation of credentials to the khedive requires a vast amount of preparation. Instead of the diplomat stepping to the street and hailing a hack to convey him to the royal palace, the khedive sends a procession of lancers, lackeys, buglers and torchbearers to conduct the stranger to his presence. When the procession reaches the palace gate the imperial band strikes up the national anthem of the country which the visitor represents and he is ushered in to its martial strains.

The Music Is Lost.

About a week before the khedive was to receive Consul Jay the master of ceremonies dashed up to the consulate and asked to see the new diplomat with every appearance of extreme nervousness. It is customary for the master of ceremonies to open a conversation by inquiring into the state of being of the consul and his family, with protestations of respect for his progenitors and immediate friends. But on this occasion the nervous messenger got right down to business.

"Your excellency," he said, "the loathsome and unspeakably vile dog who is leader of the imperial band has had the effrontery but this very morning to crawl before me on his belly, and with loud lamentations to tell me that he has mislaid or lost the music of the 'Star-Spangled Banner.' The punishment for his crime will be terrible, but in the meantime if the son of a dog and a thousand dogs cannot find the music for the 'Star-Spangled Banner' would it suit your Excellency if the band plays 'Marching Through Georgia' when your excellency arrives at the palace gate?"

Being a true diplomat, Consul Jay rose to the occasion. It might also be stated that Jay was born north of the Mason and Dixon's line, otherwise complications might have ensued.

"It would please me greatly," said Jay, "if the imperial band should play 'Marching Through Georgia' upon my arrival."

"Oh, Say, Can You See."

Thereupon the master of ceremonies backed himself out of the room with many assurances of his thankfulness, and protesting between thanks that, regardless of whether the dog of a band master found the music or not, he and all of his players would have the skin removed from their backs by public flogging; they would be boiled in oil, drawn and quartered.

On the morning of the presentation Consul Jay stepped into an open-faced "punkin" carriage drawn by prancing chargers. Two lackayes stood behind. The others walked ahead and behind. The carriage was preceded by a troop of lancers and buglers.

As the carriage entered the postern gate Consul Jay was prepared to hear the air of "Marching Through Georgia," but instead, there was a crash of cymbals, and bandsmen, with all the force of their lungs and all the spirit they possessed sent up the good old strains of "Oh, Say, Can You See!" And Jay passed into the palace through a lane of dazzling smiles from bandsmen who had escaped a horrible death. They played the American national anthem as it has seldom been played before.

Wisdom and Laughter.

One should take good care not to grow too wise for so great a pleasure of life as laughter.—Addison.

Where Heat Is Acceptable.

We don't mind a hot temper so much if it comes with a sunny disposition.

PROFIT IN SEED FLAX

No Reason Why Crop Cannot Be Raised on Old Land.

Domestic Supply Does Not Equal Demand—Larger Returns Received From It Than From Small Grains in Northwest.

(Prepared by the United States Department of Agriculture.)

The production of flaxseed in the United States has been less than the demand since 1909 and, under certain conditions, it may be profitable to pay more attention to this crop. Although flaxseed has always been regarded as a crop for new land and at the present time is grown most extensively in Minnesota, the Dakotas and Montana, there is no reason why more flax should not be raised on old land in the upper Mississippi valley. Farmers east of Minneapolis and Duluth should not attempt, however, to raise flaxseed in small quantities without co-operative shipping arrangements, because of the lack of markets in the East where flax can be sold in less than carload lots.

Two reasons for the abandonment to a large extent of flaxseed as a crop in the older states were the large production on new land, and the prevalence of disease. Disease, however, can be minimized by the proper treatment of seed and soil. As has been said, the domestic supply does not now equal the demand. On the other hand, farmers in the northern states are learning that wheat cannot always be relied upon and that it is a mistake to make this their one cash crop. As a matter of fact, for a number of years the average return per acre from flax in North Dakota, Minnesota and Wisconsin has been greater than from any other small grain.

The farmer who is about to engage in the production of flaxseed should first obtain a good supply of seed. The best plan is to get this from someone in the locality who has a good yielding stand of flax free from weeds and disease. If this is not possible, the agricultural experiment station in the state or the bureau of plant industry, United States department of agriculture, may be applied to for further advice. The cleansing of the seed with a fanning mill, the selection of the largest and plumpest seeds, and disinfection with a solution composed of one pound of commercial formaldehyde of standard strength to 40 gallons of water, are strongly recommended.

Where flax is grown continuously on the same land, disease often develops in spite of these and other precautions. A rotation which includes a cultivated crop will go far toward overcoming this difficulty. If flax wilt is known to be present, flax should not be grown in the same field more than once in every five years, unless resistant varieties are used. In planning rotations, it is best to have flax follow some cultivated crop rather than a small grain. The small grains can follow the flax.

Spring plowing will usually give better results than fall plowing, and a firm, well-prepared seedbed is essential. It appears to be a mistake, however, to put off sowing until June 1—a common practice in the Northwest. Tests have shown that in the northern Great plains the best results are usually obtained from the latter part of April to the first week of May. In the high, dry plains seeding may be somewhat later. From 15 to 35 pounds of seed to the acre is sufficient for the production of seed flax, although a higher rate is commonly used when the crop is grown for fiber.

Fuller details in regard to the production of this crop are contained in Farmers' Bulletin No. 785, a new publication of the United States department of agriculture.

LEARNING VALUE OF ALFALFA

Feeders Are Demanding Hay as Substitute for Corn—Timothy and Clover More Plentiful.

Alfalfa hay is at a high-priced level on the general market. Feeders are learning its value as a substitute for corn, and are demanding it more and more. This, with the light crop in many sections, has pushed up the price.

Timothy and clover are relatively more plentiful, while prairie hay is not found in the amounts common in other years, though there is a good crop of it.

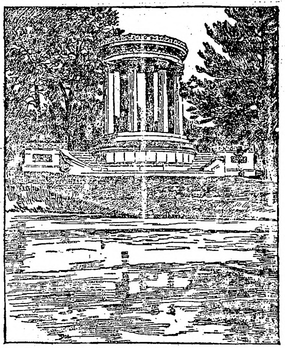
Talent and Work.

A talent does not relieve us from the necessity of working. It only shows us the line in which we can work most effectively. The girl who thinks that because she has a natural taste for music, she can dispense with the practice of scales, will find herself worse off than another who owns that she has no talent, but is ready to plod.

Worldly Anxiety.

A little girl of Maida Vale was asking questions in regard to her father's brothers and sisters. She elicited the circumstance that one of them went back to heaven soon after he was born. "Hard luck!" she remarked. "Very hard luck, indeed. I hope," she went on, earnestly, "I do hope grandpa got his money back!"—Lloyd's News.

Unique Memorial Completed



Mary Baker Eddy Memorial, Mt. Auburn Cemetery, Cambridge, Mass.

The beautiful memorial to Mary Baker Eddy, the Discoverer and Founder of Christian Science, has been turned over to The Christian Science Board of Directors by Elbert S. Barlow of New York City who held the contract for its construction.

The memorial, which is at Mt. Auburn cemetery, Cambridge, Mass., has required over a year and a half to complete. The fund for its construction, amounting to over $150,000, was first announced by the directors in June, 1911, and was some time ago fully subscribed. These contributions have been made as expressions of sentiment by Christian Scientists throughout the world.

The site on which the memorial is located is not only one of great natural beauty, but on account of its grade has rendered possible a more picturesque and interesting treatment architecturally than would be possible on a perfect level lot. The plot, which is approximately 80 feet square, slopes gradually from the level of the roadway to the lake with a drop of about ten feet. The memorial consists of a circular open colonnade of eight columns, resting upon a stylobate of three steps, surrounded on the front by a circular platform slightly above the natural grade, from which platform a double flight of steps leads to a lower platform at the lake's edge. The scheme has no prototype and is merely a screen of columns open to the sky, inclosing a flower-grown circle.

The material used for the memorial is Bethel white granite, the inscription in the frieze and upon the top of the pylons being of white bronze set deep into the stone work. The detail, which on account of the size of the reproduction is only indicated, is entirely floral in form and free in treatment, the wild rose and the morning glory being used as the main motives. It is interesting architecturally to note that while it is extremely free in treatment and not at all conventional, it is generally very classic in feeling. The extreme width of the memorial is about fifty feet, and the colonnade is eighteen feet in diameter. The columns themselves are fifteen feet in height and are similar in general character to those in the Clepsydra of Andronicus of Cyrrhus. The large pylons were exhibited at the American Institute of Architecture in New York a short time ago and experts pronounced them the finest pieces of carved granite ever executed.

The architect is Egerton Swartwout of New York City who designed the new George Washington memorial, the new Missouri state capitol and the new Federal building in Denver.

THE [illegible] OF BARLEY.

[National Crop Improvement Service.]

In the United States and Canada, barley is used as a feed for farm animals, less than one-third being used for malting. A limited amount is used in the preparation of breakfast cereals and for pearled barley. "Our farmers are learning the value of barley as a part ration for dairy cattle and young stock and much more will be used as animal food in the future," says Professor R. A. Moore, the greatest barley breeder in the world.

In many states barley is quite generally grown as a hay and feed for horses. When used as a hay it is cut in the milk stage shortly after heading and cured like timothy and blue grass. We think that the hay phase of barley this year is very important because all acreage that has never been planted to other crops or that will need replanting for any reason, could be put into barley at a clear profit.

When the grain is used as a feed, it is either fed whole or the kernels crushed by passing between rollers. If finely ground the gluten therein makes a sticky mass as soon at it is brought in contact with moisture and it is not then readily masticated or digested. Only a limited amount of barley is exported from the United States and the export consists largely of a mixture of varieties as feed.

CORN ROOT WORM

200,000,000 Bu. Lost to Corn Crop Annually by This Pest.

[National Crop Improvement Service.]

The damage done to corn in the corn belt is estimated to be 200,000,000 bushels annually. In our mad scramble to get corn into the ground this year, we do not want to overlook this tremendous waste. Next to poor seed corn, the corn root worm is the greatest source of loss to corn. The remedy is the rotation of crops. Never grow more than two crops of corn consecutively on the same ground. If you had corn root worm bad last year and it is too late to put in anything else, you had better change to barley. Your seedsman can still furnish you with some excellent seed barley. If you do put in corn on that land, be careful to give your land more than a usual preparation. The time is late and we will have to bend every energy to plant our corn crop.

"Dry Farming" Needed Everywhere.

[National Crop Improvement Service.]

When we say "dry farming" we immediately begin to think of the western plains where the rainfall is deficient. We all admit that they should take unusual pains in conserving their moisture.

Well we ought to be ashamed of ourselves in the humid territory. When comes along a year like this, we think we are terribly abused and yet in any of this territory we have had more rain than Western Kansas and Nebraska gets any year.

Therefore, let us take dry farming methods to ourselves. Because in some years the rain comes when we want it, is no excuse for neglecting conservation of moisture.

What is this dry farming? Let us take it up with the clubs and make it an institute subject. Let us get our best farmers to agree to practice it. There is no drought year in the corn belt which does not have more moisture than necessary, if conserved, to raise a crop of corn.

POWER ENOUGH

Work Your Tractors Night and Day and Plow Every Acre.

[National Crop Improvement Service.]

Many farmers will not be able to put in their whole acreage on account of the lack of horses or other power. Every tractor in this county should work night and day as long as there remains an acre unplowed. There is still time to put in barley, and corn and potatoes, all three of which are worth almost their weight in gold. We appeal to every tractor owner to offer its services to any man who will not be able to get his soil prepared otherwise.

BARLEY VS. WHEAT.

[National Crop Improvement Service.]

Barley at 60c per bushel will profitably compete with wheat at $1.00. Were it not for the sustaining influence of the high prices for malting barley, it would compete with oats, but as it is the crop of barley for 1915 brought $122,500,000.00. The price of barley is now $1.20 to $1.50 per bushel, but taking $1.30 as a basis, the 1916 crop of 180,000,900 bushels, would bring $234,000,000.

Yields of 40 to 50 bushels of barley per acre are not uncommon and as just a feed value this means a handsome return to the grower. But in addition to this, there is always the incentive of raising a good crop of superior barley that can be sold for malting purposes, at advanced prices, and a good yield of malting barley will hold its own with any other crop.

MONEY IN BARLEY.

[National Crop Improvement Service.]

Those who have been disappointed in getting spring wheat seed are able to still make an even more profitable crop by putting in barley. The Wisconsin Experiment Station with headquarters at the University in charge of R. A. Moore, can furnish on telegram orders pedigreed barley by express in almost any quantities. The seedsmen are well supplied with this seed, and farmers who have otherwise idle land, can still make barley-raising a great success. Barley should be a leading crop wherever spring wheat can be grown and in many cases farther south where other crops may have to be plowed up.

THE QUESTION OF LABOR

Probably the Most Serious Handicap to Put in Maximum Crops This Year Is the Scarcity of Farm Labor.

[National Crop Improvement Service.]

Many a good crop will be ruined because farmers cannot get labor at the right time. There are two times of the year when more labor is absolutely necessary—at seed time and at harvest. While our farmers need men at other times of the year, these are the two crucial periods.

As it is to the interest of every person living in this county to produce a bumper crop this year, we must do all we can to help the farmer and perhaps the most important thing we can do, is to find him right help of the right class.

There are three classes of farm help—(1) The regular farm hands who are going to be rather scarce. (2) There are, however, a great many men who work in factories, in wholesale houses, drive teams and other occupations who could possibly be spared during the rush seasons. It is the duty of the commercial clubs and manufacturers to make a list of these men and offer them for detached service when urgently needed. There is a third class of labor which is very efficient and that is men of affairs who have been raised on farms who will volunteer to help the farmers out during the rush. This is the greatest work our business men can accept to show their patriotism at this time.

A Report on Rotation of Crops.

[National Crop Improvement Service.]

The tenth annual report of the North Dakota Demonstration Farms is ready for distribution. The crops are rotated on these farms. The results indicate that a rotation of crops pays. The average wheat yield was 23¾ bushels. This wheat was in most cases followed by corn that had been manured. Oats 58½ bushels, barley 37½, rye 21¼; alfalfa 2¾ tons per acre. The rotation practiced on each farm is given in the report as well as a detailed account of just how each field was handled.

BARLEY NEXT TO CORN.

[National Crop Improvement Service.]

Barley has a feeding value next to corn. Indeed some feeders place it ahead of corn for pig food and at the present prices, barley will make as much and more profit than wheat. The wheat crop has now "gone to the jury." We cannot do much more about wheat but we have two or three weeks yet in order to put all of our acreage remaining into barley.

Barley is more profitable than oats. In fact, very few farmers make any money out of oats under the best circumstances and very few barley farmers ever lose money on barley. There is always the fascination of getting a fancy price for fancy barley, and although less than one per cent of all grains are used for malting purposes, the additional price which it gives to barley over oats always makes money for the farmers. While perhaps one per cent of the grain crop is used in brewing, the loss of feed value is much smaller because fully one half goes back to dairy farmers in the form of dried grains and other by-products, which for feed purposes is among the best available.

BARLEY YIELDS.

[National Crop Improvement Service.]

"Regarding the best yields of barley, we will say that this is rather a difficult thing to give because the yield sometimes depends more upon the threshing record. However, the average yield of pedigreed barley of members of the Wisconsin Experiment Association was in 1913, 31 bushels, 1914, 33.3 bushels, 1915, 37.5 bushels. The yield for 1915 is the average from over 260 members reporting. Some of the highest ones are as follows: 60, 57, 56, 55, 53 and 45 bushels.

"It is impossible to state what has been the highest yield in Wisconsin, but I think some of these yields for last year, which was a very good barley season, are quite reasonable, but do not doubt though that there may be larger yields than these, but I have no knowledge of them."—J. J. Garland.

BARLEY NOT A HUMAN FOOD

As a Bread Cereal It Is Little Used. As An Animal Food It Is of Great Value.

[National Crop Improvement Service.]

For many centuries barley, the "corn" of holy writ, was used as a bread cereal, but it has practically gone out of use, except that Norway and Sweden use it in their peculiar bread disks, which are about the size and shape of a phonograph record.

Barley in itself does not make a good bread flour and could be utilized only by mixing it with wheat, something which the American miller considers desecration of his shrine. It has a peculiar flavor and is just as different from wheat bread, as either corn or rye.

But as a stock feed, it has many merits. As the kernels are too hard for some animals to relish, it may be crushed by passing it between rollers.

If finely ground, the gluten makes a sticky mass as soon as it is wet, and this peculiar property makes it difficult to make it into good bread. Its main use in the American kitchen has been to use it as pearled barley in soups. It is used some in breakfast food, through a malting process, but unless we as American people are on the verge of starvation, we will never use barley as a regular diet.

SAYS U-BOATS ARE QUITTING

Hint Comes From London That New Method of Warfare Brings In Many.

London.—Under the title "A Londoner's Diary" the Evening Standard prints the following, which there is reason to believe is not lacking in substantial truth:

"Some time ago I referred to the rumors concerning 'docks full' of captured submarines, and warned my readers against taking them too literally. I am now in position to say that there is more substance than usual behind the present gossip of successes against submarines.

"Whether anything has gone wrong with the supply ships, or whether the Hun crews dislike the task, the fact remains that there have been surrenders. I understand too that the men of our destroyers are elated at the results of a certain new method of fighting submarines. It would be indiscreet to give particulars, but no harm is done by stating that the great difficulty of detecting the presence of a submarine has been met with considerable success. It is, as Admiral Jellicoe hinted, only a matter of time."

CHEW CORDITE TO GET TIPSY

Women and Girls, Munition Workers In Great Britain, Use Explosive for Exhilaration.

London.—Officials of the ministry of munitions have discovered that a good deal of the "drunkenness" attributed to women and comparatively young girls is due to another and hitherto unsuspected cause—the chewing of cordite, the smokeless explosive used in the shell of cannon and the ammunition of small arms. The explosive is being used as a sort of "pick-me-up" by the tired munition workers, but its effect on their health is very injurious and remedial measures are being taken by the authorities.

Cordite, when chewed, has all the exhilarating effects of a highly stimulating drug and cannot be tampered with except at great risk. Its effect on the nervous system is immediate and ultimately deadly.

Cordite consists roughly of about 58 parts of nitroglycerin, 37 parts guncotton and 5 parts of mineral jelly. Each cartridge contains 60 cylindrical stands of cordite.

KIPLING QUITS IN PROTEST

Leaves Society of Authors Because of Charity Books Published In Aid of War.

London.—The Times re-prints from the British Weekly the following extract:

"Rudyard Kipling, inclosing his check for $500 toward the pension fund, has sent his resignation from the Society of Authors, on the ground that the action of the committee and its acceptance by his fellow members prove that he is altogether out of sympathy with the present views of the society.

"Mr. Kipling's resignation, which apparently is caused by a difference of opinion as to the charity books published in aid of the war, is greatly regretted by the committee. He has been a member of the society for 25 years."

WOULD HAVE NO TOWN CLOCK

Hotel Keeper Seeks Injunction Against City Timepiece, Saying It Will Wake His Guests.

Wichita, Kan.—S. J. Smalley, proprietor of the Coronado hotel, across the street from the city hall, employed a lawyer to obtain an injunction to prevent Mayor Bentley and the commissioners from installing a clock in the city hall tower. For years citizens have petitioned administrations to beautify the unsightly boarded-up tower with a clock, and the Bentley administration let a contract for a $1,500 clock. Smalley alleges that the striking of the clock will wake up his guests every hour at night.

CHAPTER XI—Meade has gone to the ranch of Winters, a college friend, and there taken stock of himself and the terrible responsibility he has assumed to save his father's name from dishonor. He makes the new start as an unknown.

CHAPTER XII—Helen and Rodney conspire to save Meade from his own false confession in spite of himself. Shurtliff has been employed by the colonel and Helen, thinking he knows the truth, sets out to win his confidence.

CHAPTER XIII—Meade gains the confidence of Vandeventer, his chief, though he refuses to tell his own story. He is promoted.

CHAPTER XIV — Unexpected rains threaten the dam before the spillway is in shape to carry off surplus water.

CHAPTER XV—Continued rains force Vandeventer and his men into an almost superhuman fight to prevent the flood waters from carrying away the dam. Disaster is imminent though every emergency means known to engineering skill is used.

CHAPTER XVI—Helen gains Shurtliff's confidence but is unable to get any admission from him. Meade has dropped out of sight and the only remembrance she has of him is the flowers that come to her daily from a sender unnamed.

CHAPTER XVII—A viaduct and bridge, just built by the colonel's company, are in the flood's path if the dam breaks. The colonel, with Helen and Rodney, and other officials of the company, are there on a visit of inspection.

CHAPTER XVIII—An attempt to force a confession from Shurtliff is unsuccessful.

CHAPTER XIX—Helen, Rodney and Winters watch from the mesa above the frantic efforts to save the dam. They see three men scrambling to a hogback that juts out into the reservoir, evidently to try some new scheme to save the dam. Helen finally recognizes one of them as Meade.

CHAPTER XX—Meade blows up the hogback and saves the dam, but is almost killed when the last charge of dynamite explodes.

CHAPTER XXI—Meade is taken to the colonel's private car. Shurtliff confesses and gives up the papers he has held concealed, completely freeing Meade from all blame for the bridge disaster. Rodney gets the whole story on the wire while Meade is unconscious.

The Testimony of the Dead.

Just as Helen Illingworth and Winters reached the lower level at the foot of the mesa, they were joined by Rodney.

"What has happened?" cried the engineer.

Winters answered as the three hurried along without stopping:

"Meade blew up the hogback."

"Was that he?"

"Yes."

"I thought there was something familiar about him, but I did not dare—"

"I recognized him instantly," said Helen Illingworth.

"That atones for the International," continued Rodney.

"What does?" asked his friend.

"The dam is safe; the water has stopped rising. I believe it's beginning to fall a little. I saw someone jump up on the palisade and wave his hand, and then I saw them all gather around, evidently cheering."

"I should think the water would be lowered," said Winters; "it's pouring out of a hole in the hogback as big as a church."

"It was a fine thing in Meade. Let's hurry and tell him so," answered Rodney.

"I'm afraid it's too late," said Winters.

"Oh, don't say that," cried the girl. "Why, what's happened?"

"The second blast was slow in going off," said Winters; "he went back to look at it, and got knocked over. It looked pretty bad from the top of the mesa."

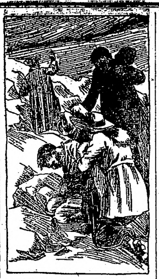
Rodney would not have been human if he had not felt a leap in his breast at the possibility, but he was too loyal a friend and too genuinely fond of Meade for more than a passing emotion, for which he was more than a little ashamed.

"Let us press on," he urged.

In a few moments they stopped by the three men. Meade was still unconscious. The big Irishman sat on the grass with the engineer's head on his knee. The deft-fingered little Italian was trying to wash the blood away from the unconscious man's forehead with a sodden, ragged piece of cloth. Meade was unconscious, he was breathing heavily. There was a catch in his respiration. His breath came at irregular intervals and was labored as if painful.

A huge rock had struck him in the breast. The two men had torn open his shirt and undershirt. The engineer's chest was bruised and bloody. Evidently bones had been broken, and probably serious internal injuries had resulted. Every breath was an apparent agony, and the exquisite pain did not arouse him to consciousness was evidence of the terrible nature of the injury. A smaller, sharper rock had cut him across the forehead and cheek, just missing his right eye, and they found out afterward that he had been struck by several other pieces dislodged by the explosion, and that his body was covered with bruises.

But there was nothing [illegible] crushed chest. Winters and Rodney were both men of action, accustomed to quick thinking and prompt decision in emergencies; while Helen Illingworth could only stand with clenched hands staring in mental anguish that paralleled the physical suffering of the man she loved, the engineer and the rancher immediately made preparations to get the wounded man to the car.



A Huge Rock Had Struck Him in the Breast.

Murphy wore in his belt a short woodman's ax. With it they cut down two young saplings, trimmed them and thrusting them through the sleeves of their raincoats they made a fairly practicable litter. Using the utmost care, they laid the unconscious man upon it and Winters and Murphy, the two biggest men, took the handles at either end. Helen Illingworth, praying as she had never prayed before, sought to support the unconscious man's head. The Italian gathered up the tools and went ahead to open up the path. Rodney followed after.

Their progress was slow of necessity. They had to handle Meade with great care. Winters and Rodney, after the brief inspection they had made, could not see a chance on earth for him. Neither could Helen Illingworth. They went along without conversation, naturally, except for an outburst of admiration from Winters.

"I tell you," he said, "it was a magnificent thing for him to do. He risked his life a hundred times in that mad rush with the dynamite in his hands and the detonators in his pocket. Yet if he had only stayed back he would have been safe."

"It was his anxiety for the dam and the people that brought him down," said Helen Illingworth. "He can't die," she murmured. "God surely will not let him die. I love him so. And yet if he does and I have lost him, innocent or guilty, he has redeemed his fame."

"He saved others," quoted Rodney under his breath, "himself he could not save."

It was a work of great difficulty to get the wounded engineer into the car, but they finally managed it. By the woman's direction they laid him on her bed in her own private stateroom.

"One of us must go for a doctor at once," said Rodney, "and that will be my job."

"It's twenty miles to the town," said the conductor, who had helped to receive them. "If one of you could telegraph we could tap a wire."

None of them could.

"It's all down-grade and there's a good roadbed and I was some sprinter in my college days," said Rodney.

"And there was never greater need of haste than now," said Winters. "I wish I had a horse here."

"Don't give up, Miss Illingworth," continued Rodney, as he started toward the door. "He's alive yet."

Just then, opportunely enough, rounding the last curve before the arch bridge, they saw the end of the other car rapidly approaching them. Had they not been so excited they could have heard the furious puffing of the engine as it drove the car at great speed up the heavy grade.

"Wait," said the conductor, "we can send the engine down for the doctor. That'll be the colonel's car."

In a few minutes the car stopped on the siding. Out of it came Colonel Illingworth, Doctor Severence, Curtiss, and some of the officials of the Bridge company in town. They were all greatly excited. The colonel did not stop to put on his hat. He ran to the other car and climbed aboard.

"The dam's going," he shouted. "The bridge and the town will be flooded. We got word an hour ago by a messenger galloping down. The telephone wires are down. I ran the car up here as the quickest way to get over to the reservoir and the dam. Some of you who know the way come with me."

By this time the observation room of the car was filled with men.

"You need not worry about the dam," said Rodney.

"What do you mean?"

"A man blew up the hog-back, made a spillway, the water rushed out through it into the ravine, you can see it below there, relieving the pressure on the dam at once. Since it has held up till now it will hold for good."

"Thank God!" cried the colonel, sinking down into a chair and wiping the sweat off his brow. "The bridge will be safe then. By George," he gasped, "the Martlet company could hardly [illegible]

"Yes."

There was a long pause. Every man there knew of the failure of the International and in what estimation the old colonel held the name of Meade because of that.

"Well, it was a fine thing," said the colonel; "it makes up for his blundering work on the bridge."

"Beg pardon, sir," said Shurtliff, who had stood wide-eyed and white and suffering in silence ever since the engineer had been brought to the car, "it was not his blunder."

"Why, you said so yourself," cried the colonel.

"I lied," admitted the secretary.

Quick as a flash Rodney had his notebook out. Here was the proof at last.

"Why?"

"To save the reputation of the man I loved."

"And how do I know you are not lying for this man now?" asked the colonel harshly.

"These will prove it," said Shurtliff, extending some papers he drew out of his pocket, where he had placed them that morning half intending to tell Helen Illingworth the truth at last.

"What are these?" the colonel asked, staring at Shurtliff, who stood erect before them, sustained more by his will than anything else, for his knees were shaking and his body quivering; yet he was glad after all, more happy than he had thought he could be, in making the revelation, in vindicating the innocent, in giving that satisfaction to Helen Illingworth, tardy, even too late, though it might be.

"Letters, sir. You will find there a blueprint of the design of the compression members," answered Shurtliff monotonously as if he had forced his mind to a certain action and it was working automatically. "With it is a letter from Bertram Meade to his father suggesting that the lacings were too light and calling attention to the empiric formula of Schmidt-Chemnitz in proof of his argument. On the back of that letter Mr. Bertram Meade, Sr., made an indorsement—you know his handwriting and can identify it—'Hold until bridge is finished and then give back to the boy. We'll show him that even Schmidt-Chemnitz doesn't know everything.'"

Colonel Illingworth turned the paper over. There was the indorsement.

"Well, by heaven!" he began.

"There's another paper in an envelope addressed to the editor of the New York Gazette. Will you read it aloud, sir?"

Almost as if he had been hypnotized Colonel Illingworth took from the envelope the brief note. He read it:

> I alone am responsible for the error in the design of the International bridge, which has resulted in this terrible disaster. I know that my son, in an effort to shield me, will assume the responsibility. As a matter of fact, he had previously pointed out what he believed to be structural weakness, but I refused to heed his representations and overbore his objections. The fault is entirely chargeable to me. There is no possible expiation for my blunder. The least I can do is to assume all the responsibility. The blame is mine.
>
> BERTRAM MEADE.

He laid it down with the other papers.

"The demonstration is complete and absolute," he began spontaneously, amid a breathless silence. "The proofs are adequate. They would establish young Meade's innocence in any court in the land. Where is he? I have done him an injustice. I am ready to make amends," continued the colonel.

"And while you are talking" said Helen Illingworth, who had been standing in the doorway too absorbed by the dramatic recital to interrupt it, "he's dying."

"Dying! Where?"

"He was battered to pieces by the last dynamite explosion. We brought him here."

"Were you there?"

"We saw it from the top of the mesa. Oh, don't talk any longer."

"Severence," said Illingworth, with prompt decision, "you haven't forgotten all your old medical skill. This is your job. One of you jump on the engine and bring a physician up and—"

"I'm going," said Rodney. "Who's the best doctor in town?"

"Doctor Fraser. He's a young man, but very skillful," answered one of the local bridge men.

"Bring our own Doctor Bailey up here from our hospital with him, and tell that engine driver to get down to the town and back just as quickly as he can go. Cheer up, Helen," said the colonel. "I know that a man is not going to rehabilitate himself by such an action and have the evidence of his innocence brought out at such a moment just to die."

"Will you give me those papers, colonel?" said Rodney. "You'll want this written up and—"

"Take them," said the colonel.

"Will you come along with me, Mr. Shurtliff? After I see the doctors I'll want your affidavit."

"Yes, sir, anything," said Shurtliff, "to try to shield your employer and the man you loved, but thank God, you spoke out before it was too late. I'm sorry I pulled that gun on you; you're a man, all right, even if you don't look it," he added to himself as Shurtliff bowed and followed Rodney.

Winters stood at the door of the passageway leading to the stateroom while Helen Illingworth and Severence, who had been educated as a physician, and the old colonel, who knew a great deal about wounds and accidents from his war experience, entered the stateroom. A new spirit had come into the relations between father and daughter and both were glad. There was no question [illegible]

man had saved a great dam, the viaduct, the town, and its people, and they would have at the same time the story of who was responsible for the fall of the International bridge. They would have the story of the attempted self-sacrifice of the son to save the father. They would have the story of the old man's splendid and magnanimous avowal of responsibility before he died. The United States, the world, would ring with the dramatic tale.

It was as much to tell that story in his own way as to summon medical aid that Rodney had gone for the doctor. And so the father held the daughter clasped to his side while both bent over the still unconscious man, whom Doctor Severence quickly and carefully and with wonderful skill, considering his long withdrawal from practice, examined.

"What is it?" asked the colonel as the vice president looked up presently. "My daughter is engaged to be married to him"—and he was rewarded by the thrill and quiver that shot through his daughter's being which he felt as he pressed her to his side—"we can't let him die now."

"He's in God's hands," answered Severence gravely. "He's been terribly pounded everywhere. His breastbone is shattered, some of his ribs are broken. I don't know."

"That awful cut on his forehead?"

"That's nothing."

"And the other bruises?"

"They count but little, but the blow on the chest"—he shook his gray head sadly, ominously.

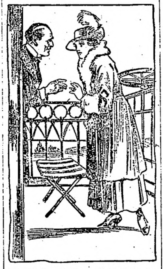
"Do you think anything has penetrated his lungs?" asked Helen Illingworth, as she pointed to her lover's lips, to a little bloody froth that came therefrom.

The old man nodded.

"Perhaps," he said.

"Oh, he can't die, he can't, he can't!" wailed the woman, sinking down on her knees by the bed.

"Not if any power on earth can keep him from it, my dear child," said the colonel tenderly, bending over her.



"Certainly, My Dear Girl," Said the Vice President.

"Send me the porter of the car," said Severance, "and take Miss Illingworth away. I want to get him undressed and—"

"You will call me back the minute I can come?"

"Certainly, my dear girl," said the vice president, who had known the young woman from childhood.

CHAPTER XXII.

At Last to the Stars.

All the men except Curtiss and Winters had discreetly withdrawn from the car and had gone over to the mesa to look at the lake and the outlet. Indeed the water was roaring down beneath the steel arch bridge, filling for the first time in generations the channel of the Kicking Horse. Fortunately it could flow that way without danger to the town or the viaduct below.

The colonel led his daughter to a chair and then turned to Winters.

"You were there?" he began. "Tell me about it."

Graphically the big cattle rancher told the story of Meade's mad rush over the rocks with his two companions, of the desperate assault on the hog-back, of the success that had met their efforts to open the improvised spillway, and then the final disaster. The recital lost nothing in his graphic relation.

"It was fine, it was magnificent," said the colonel, patting his daughter's shoulder. "Where are the two who went with him?"

"They're outside there," said Winters.

The old colonel went to the door of the car and called the two men into the car.

"In the bank down in Coronado there's a thousand dollars of mine for each of you," he said promptly.

"We didn't do it for money, sor," said the big Irishman, "although 'twill be welcome enough, but how is Mr. Roberts?"

"You mean that man who blew up the hog-back?"

"Si, signore, a greata man he ees," said the little Italian.

"I wish I could say he was all right, but there's a doctor with him and we have sent for the best physician in town. He's terribly hurt."

"But please God, he may pull through, sor. The Holy Virgin an' the Saints preserve him," said the Irishman, making the sign of the cross.

And in his own language little Fu[illegible]

"Murphy," shouted a voice from the pines on the side of the hill between the car and the mesa.

"That'll be Mr. Vandeventer, the resident engineer," said Murphy.

Colonel Illingworth turned to the door again.

"Where's Roberts?" cried Vandeventer, stumbling down the hill. He was haggard and worn and weary to the point of exhaustion, but as soon as he had been assured of the safety of the dam—and before he left the water was visibly receding—he had started out to seek the engineer whom he had, in his mind in the excitement of the moment, accused of desertion.

"He's here in my car, sir," said Colonel Illingworth.

"And who are you, may I ask?" said Vandeventer, crossing the track and swinging himself upon the platform of the car.

"I am Colonel Illingworth, president of the Martlet Bridge company."

"But Roberts?"

"His name is not Roberts. It's Meade."

"What? The International man?"

"Yes."

"I knew he was an engineer. Well, he's made up for his failure there."

"He did not fail there any more than he failed here," said the colonel.

"Where is he?"

"It's a long story."

"It can wait," said Vandeventer brusquely. "I want to thank him for saving the dam and the lives of the men on it, and the town, and the railroad, and the bridge."

"I don't know whether you can thank him or not," said the colonel.

"You don't mean—"

"He was terribly hurt by the last explosion and they brought him here."

"Can I see him?"

For answer Colonel Illingworth pointed to the door.

"This is my daughter. Your name is Vandeventer, is it not? Helen, this is the engineer who is building the dam. He has come to ask after his man."

"I've done everything I can for him," said Severence, coming out of the stateroom, followed by the porter, as Vandeventer shook hands with the girl. "He's still unconscious, but seems to breathe a little easier."

Into the little room the woman and the four men crowded. Vandeventer, accompanied by Murphy and Funaro, followed the colonel. Neither of the workmen would be left out. There lay the engineer, his face as white as the linen of the pillow or the bandage which had been deftly tied around his head. One hand, still grimy and mud-stained, lay on the sheet. Helen Illingworth knelt down and kissed it and laid her head on the bed.

"He is to be my husband if he lives," she said simply.

"A man and an engineer he is," whispered Vandeventer.

"I misjudged you, Meade," said the colonel softly, speaking as if the unconscious man could hear. "I condemned you. I wish to heaven you could hear me make amends now."

"Begob," whispered Murphy, "you'd ought to seen him run wid the dinnamite."

The voice of the Italian murmured words which they knew were prayers and though they came from humble lips they brought relief to all. They entered deeply into Helen Illingworth's heart and mingled with her own petitions, frantic, fervent, imperative, although she offered them to Almighty God as from a woman broken. Presently they all filed out of the room, leaving Helen Illingworth alone with what was left of life in the crushed body of the man she had never loved so much before.

In the observation room Vandeventer told them of the fight for the dam and how they had reached their maximum power of resistance and more, and that the relief came in the very nick of time. Meanwhile the engine driver had burned up the track going and coming and in less than an hour he was back with two surgeons and a trained nurse. Was it their skill and care and watchfulness that finally brought Meade back to consciousness, or was it the passionate, consuming intensity of will and purpose of the woman who loved him, who could scarcely be driven from his side? Well, whatever the reason, after many days he passed from death into life and came back again.

He was conscious of Helen's presence and lay quietly enveloped in her love before he could talk coherently or question. Indeed, with Rodney and Winters, and old Shurtliff, who swore to himself that he would never forgive himself if Meade did not recover, and the colonel, and Vandeventer, and all the men of the force, who used to stroll over after hours and just sit on the side of the track and stare at the car where the man who had saved them was fighting for his life as desperately as they had fought to save the dam, Meade was surrounded by such an atmosphere of admiration and devotion as might have stayed the hand of death itself. There came a day when the physician said he could talk a little.

"I saw you," Helen whispered. "I was standing on the high hill watching, looking down upon you just before—"

"But I shall look up to you all the rest of my life," said the man, as the woman knelt, as was her wont, by the side of the bed. She kissed his hand thin, wasted, but white and clean now.

"No, I to you," she murmured, as she pressed her lips to his fingers.

"Look up a little higher, then," whispered Meade with some of the old hu[illegible]

The voiceless movement of his lips told her the story. She raised herself and kissed them lightly.

"I haven't dared to ask that before," said the man, closing his eyes. "I wasn't strong enough to stand that."

"But you're going to get strong; you must. I'd like to kiss you forever," said the woman with pitying tenderness and great joy.

"It's heavenly now, but I shall have to go away again when I am able and—"

"We are never going to be parted again."

"I cannot let you marry a discredited man, a failure."

"Don't you know," said the woman, rising, "that the whole United States rings with your exploit, that the splendid saving of the dam has caught the fancy of the people as it deserves and you are a hero everywhere and to everybody?"

"But the International bridge and its failure?"

Unbeknown to the two the colonel had stood in the doorway.

"We know the truth now, my boy," said the old man, coming into the room, "It was your father's fault, not yours."

It was characteristic of Meade's temper and temperament that his white lips closed in a straight line at this.

"Where's Shurtliff?" he asked, after a silent communing with himself.

The old man had come in and out of the room like a ghost during his slow recovery. Colonel Illingworth turned away and summoned the secretary. Rodney and Winters came, too.

"Shurtliff," said Meade faintly but firmly, "tell them again who is responsible for the failure of the International."

"Forgive me, Mr. Meade," said Shurtliff, "but it was your brave old father's fault."

"You see," said the colonel.

"We knew it all the time," said Rodney.

"But Mr. Shurtliff bravely gave us the final proof," said Winters.

"Those papers?" said Meade.

Shurtliff nodded.

"And your father's own letter that he wrote the papers before his heart broke," said Rodney; "I'll read it to you presently."

"Why did you do it, Shurtliff?"

"To right a great wrong, sir. I saw that we were mistaken to try to spare the dead at the expense of the living, to wreck your life and the future, and the happiness of Miss Illingworth. God bless her for her kindness to a lonely old man. And so when you were brought here dead I told them the truth and gave them the papers."

"Gentlemen," said Meade, making a last try, "it is useless to deny it now, but for the sake of my father's fame you won't let anyone know?"

"Old man," said Rodney, "it was on the wires an hour afterward and the whole United States knows it now. Your father made the mistake; his letter admitted it bravely. The world honors him, it honors you."

"Rodney," said Meade, "I wish you hadn't done it."

"It was for Miss Illingworth's happiness and yours that I did it," said Rodney. "And how much that cost me," he added, the confession being wrung from him, "no one can ever know."

He turned and left the room. Winters followed him full of sympathy and comprehension.

"Let me go out alone, old man," said Rodney. "I'll be back presently. This is the last fight I've got to make."

Winters watched him from the steps of the car as he disappeared in the pine trees en route to the mesa to fight it out under the open sky alone. The others left the room also, last of all Shurtliff.

"You forgive me, Meade. I've been through hell itself," said the old man, "in these last six months."

"Freely," said Meade.

And Shurtliff went away with a lighter heart than he had borne for many a long day.

The two lovers were alone again.

"You see," said Helen, "there's nothing can keep us apart now."

"Nothing, thank God," whispered the man.

"But I am sorry that it all came out this way. I'm sorry not only because of your suffering, but for other reasons —Rodney for one. He—it's too bad! It was not necessary for you to get yourself almost killed to win me, I mean, for wherever and whenever I found you I was resolved to marry you, willy-nilly."

"And is it true that poor old Rod had grown to care?" he asked, putting by the academic discussion.

The woman nodded.

"I'm very sorry. I can't help it. We were always together, talking about you," she said.

"And he couldn't help it, either," said Meade. "Somehow I believe he was the better man for you to have taken."

But he looked at her wistfully and anxiously as he spoke.

"I won't argue with you," said the girl, bending close to him. "I'll only say that I know I have the best man in all the world, but if he were the worst, I would rejoice to have him just the same."

(THE END.)

Wishes That Come True.

Good wishes have a way of realizing themselves. They have a potency most magical, and the girl who is always wishing the best for other friends finds her hopes realized for herself, as though kindly wishes were a sort of gracious boomerang, coming back to the heart that sent it out. Just wishing others joy, if the wish is from the heart, helps to [illegible] happiness of the [illegible]

Liberty Loan Bonds

To You, Citizens of Pennington County:

Your Country is calling YOU!

Your Country is at war with a powerful adversary. Your services are needed NOW by the United States of America.

Your Government must have money to pay for the war and must borrow it from you. The Nation gives you in return a Government bond, a written promise of the United States to repay you your money at a future fixed date, with interest until paid at 3½ per cent a year, interest paid you every six months.

These Liberty Loan Government Bonds are backed by the total resources of the United States, THE RICHEST NATION IN THE WORLD.

Subscribe your share and protect your Country; help furnish food to our Allies, and STOP THIS WAR. Buy a bond—buy all the bonds you can afford—urge all your friends and neighbors to buy their share.

Your Service is as Necessary as the Soldier's.

He can't fight without your help.

Let's tell Uncle Sam we are with him to the last trench.

Show the rest of the Country where Pennington County stands.

Through its regular channels the Government has DRAFTED the banks of this State to assist in placing the Liberty Loan Bonds. This service and the efforts which is being made by the banks is furnished without one cent of cost to the government and without a cent of profit to the banks. It is a patriotic duty which they are discharging and it is up to every loyal citizen what ever nationality to respond.

The Government does not expect you to do the impossible, but it DOES EXPECT you to do "your bit". Be prepared to buy your bonds when called upon by the solicitors of the Liberty Loan Committee, or better still, make application today thru your bank.

DON'T DELAY, all applications must be in Washington by June 15th

Liberty Loan Committee

Literary Society Picnic Largely Attended.

The picnic given last Sunday by the Goodridge Literary Society at the beautiful farm home of Mr. and Mrs. Henry Arndt on the Red Lake River near Highlanding, was attended by a large crowd. Eleven auto loads and several buggy loads of people being present. The day was fine but rather cool on account of a chilly wind, but this was not noticed very much when the picnicers arrived at their destination as the picnic grounds were sheltered by a big grove.

The time was spent in various ways some went boat riding, others played croquet while others were content to sit on the river bank and take life easy After the lunch was over two baseball games were played, one between the married and single ladies the other between the married and single men. The result of the first mentioned game, was a win for the single ladies by a score of 5 to 4 and the latter game resulted in a win for the married men by a score 7 to 6. After the games were over everyone adjourned to the picnic grounds where ice cream was served after which the party left for their homes feeling that they had spent a very enjoyable day.

The Vacant Lot.

In every town are vacant lots with varied rubbish lumbered producing cheap forget-me-not and coclebur unnumbered. Year after year they go to seed, when autumn winds are sighing and every brand of noxious weed there on is multiplying. If all those lots were sown to parsnips, spuds and carrots, less often would we hear men brood in hunger stricken garrets; And here we see the Nation's vice, the waste that has no ending; economy can cut no ice, while we have coin for spending. Why plow the weed-grown neighborhood? Our standoff at the store is good; we'll think of such schemes later. All winter in our little town some folks were nearly starving some charity was handed down, some roosters for their carving. But not a lesson have they learned, their future course to sweeten, the coal we handed them is burned, the grub we gave is eaten. The spring is here why look ahead? And when they're needing bread the town will have to find it.—Walt Mason.

HIGHLANDING NEWS

Mother And Baby Burned to Death.

On Friday afternoon occured the death of Mrs. Ole Nelson and baby.

Mrs. Nelson was planting potatoes and the baby was sleeping in the house. When Mrs. Nelson discovered the fire she ran into the house to take the baby out and never returned. The house wys burned to the ground. The baby was found on a couch and Mrs. Nelson was found in a heap on the floor. The cause of the fire is not known. Mr. Nelson was working on Mrs. Narveson's farm and was called home as soon as the fire was discovered by the neighbors. Mrs. Nelson leaves to mourn her death her husband and three little children.

We wish to sympathize with Mr. Nelson and children in their sad bereavement. The funeral was held at the Brunkeberg church Monday.

Miss Arvella Heggestuen visited with Mrs. Overum Sunday.

Carl Lindstrom of Goodridge was an overnight visitor at the A. T. Olson home Saturday.

Mrs. Christ Thorson and Mrs. Sever Nelson called at the Henry Halvorson home Saturday.

Miss Alice Thorson and Miss Ella Olson were out for a joy ride with Einer Morken Sunday evening.

The Ladies Aid held at the home of Mrs. Sever Nelson was well attended. The sum $6.40 was received for the Ladies Aid.

Matt Erickson and Henry Arnt received their new Ford cars Monday.

Sever Nelson was a business caller in Thief River Falls Tuesday.

URGE YOUR MENFOLK TO HELP UNCLE SAM.

The women of the northwest can do the nation an invaluable service today by urging the un married men of their acquaintance to join the Navy. The Navy is in urgent need of thousands of young men. It invites investigation.

U. S. Navy Recruiting Stations located at No. 304 Marquette Avenue, Minneapolis, Minn., and:

Post Office Building.

Mother and Child Burned to Death.

Last Friday afternoon Mrs. Ole Nelson and baby lost their lives in a fire which destroyed their farm home 4 miles south and 2 miles west of town.

Mrs. Nelson was working in the garden when she noticed the fire and immediately ran to the house to save the baby but was evidently overcome by heat before reaching the couch on which the baby was sleeping as her charred body was found a short distance from where the baby lay. Mr. Nelson, who was working on Mrs. Narveson's farm, was notified as soon as the fire was discovered by the neighbors, but he arrived too late to be able do anything as the building was in ruins. The origin of the fire is unknown.

The funeral of the unfortunate mother and child was held Monday afternoon at the Brunkeberg church, Rev. Bjornson conducting the services. Mrs. Nelson leaves to mourn her untimely death, her husband and three small children, who have the heartfelt sympathy of the entire community in this their hour of sorrow.

Farmers Ask Fair Deal; They Don't Need Advice

By A. C. Townley.

The farmers of America can double their crops this year; they can grow ten times as much food next year as they ever grew in any year before and they don't need any advice to this—they need a fair deal!

It is up to the United States government whether this years crop shall be large or small.

This is what the government must do to get all this foodstuff:

Take over the distribution system.

Take over the packing plants, canneries, flour mills, warehouses, elevators and storage plants. Take over the idle land held by speculating land holders, and distribute it among the hundreds of thousands of farmers who will make this land productive.

Loan the farmers money with which to buy seed, equipment and labor.

The Navy Department, through Lieutenant Commander James D. Wilson of the Minneapolis Recruiting Station, today continued its appeal to the Northwest for men.

The appeal today reads.

THE NAVY MUST HAVE MEN!
IT NEEDS THEM NOW - TODAY!

You don't need to wear a uniform to recruit for the Navy. Ask that healthy young man why he hasn't joined. Direct him to the nearest recruiting office. Tell him to investigate the Navy before he enters any service. The place to direct him in Minneapolis is No. 304, Marquette Avenue.

Clarence Wayne made a short call on John Clausen Sunday forenoon.

John and Ed. Ristau called on Clarence Wayne Saturday evening.

J. Payne of Goodridge was a visitor at the Will Wayne home Saturday. He also made a business trip to Mavie.

The dance at Adolph Jensen's was well attended and everybody reported having had a fine time.

Oscar Rambec, a prosperous farmer in this vicinity has purchased a new Overland.

Mrs. Chas Habedank and son Emil and John Clausen and Clarence Wayne went to Thief River Falls Thursday. They were accompanied by back Luela Habedank who has been visiting with relatives at Erskine.

Emil Ristau went to Mavie to get a full blood Shorthorn bull which was shipped from Minneapolis.

Rev. Hauser of Warren conducted services at the schoolhouse here Sunday.

NOTICE.

Notice is hereby given that all dog owners are requested to get a license for their dogs at the office of the Village Council, before June 1st, 1917.

By order of the Village Council.

C. H. Christiansen,
Village Recorder.

Jury List Ready For Coming Term.

The petit jury for the June term of the district court has been drawn and the sheriff will start to notify the men who have been selected. Court opens on June 26 with the grand jury, in case there are any criminal cases, and on the 27th petit jury convenes. All notes of issue in cases to be tried at the term must be filed by June 19, according to the clerk.

The petit jury list is as follows:

John Dablow, Town of North; Alfred Hammersten, Town of Highlanding; Elof Halvorson, Town of Reiner; M. V. Evenson, Thief River Falls; F. A. Protz, Thief River Falls; Ben Erickson Thief River Falls; Chas. Kjellen, Town of Mayfield. John Sjolsvold, Town of Norden; A. P. Hogstom, St. Hilaire; F. J. Stebbins, Thief River Falls; Ed. Lee, City; Theo. Olson, Town of Kratka; O. Odegaard, Town of Star; Chas. Keller, Town of Wyandotte; M. A. Smith, Thief River Falls; A. S. Liebersan, Thief River Falls; Emil Larson, Town of Bray; John Albin, Town of Wyandotte; John J. Lindblad, Town of Hickory; Richard Lorentson, Town of Black River; Albert Arntz, Town of Reiner; O. K. Lein, Town of Star; Herman Lindblom, Town of Bray; Thomas McCormick, Town of Selverton.

Let The Chickens Help Win The War.

The hunger period which threatens the United States and its allies in the present war may be warded off, in part at least, by attention to the lowly chicken, says A. C. Smith, head of the poultry department of the Minnesota College of Agriculture.

The hen is the only producing creature that can be profitably kept on small areas such as city and village lots, that will transfer table waste into a highly edible product. She selects from waste material, bugs, weeds and grasses a large part of her living for several months in the year and during this time is usually a high producer of very fertile eggs. She reproduces her kind much more often than any other productive animal.

She can be cared for by women and children and often by invalids and convalescents.

For these reasons, Mr. Smith urges that every well selected hatchable egg should be set at this season when eggs are lower in price than at other seasons.

Other poultry including ducks, geese, and squabs should also receive careful attention in view of the present and future food situation.

Notice.

By resolution passed by the Count Board at a special session held on the 15th day of May, the County Auditor was instructed not to pay any further bounties for wolves until there will be money available from the State to meet such payments.

Dated at Thief River Falls, Minnesota this 19th day of May, A. D. 1917.

T. P. Anderson,
County Auditor.

Our editorial page has been neglected for some time, due partly to the lazy feeling of spring weather. We shall try to do better in the future and occasionally call attention to things that you don't find in the daily papers you read.

Some of our patriots at the county seat urge upon the farmers to plant every available acre. They offer to furnish seed to the farmers, but note the condition: "You can have money at my bank", they say, but of course I will have to have a chattel mortgage". A seed grain note will not do. They are not willing to take a chance with the farmer on the crop raisd from the seed. No they want mortgage on the crop and the farmers cattle. How patriotic they are for their own pocket book.

There is agitation on all sides that this country must feed the Allies if we want to win the war and the farmers are urged to do their part. When did the farmers fail to do their part? is one query. They want the farmers to raise large crops so that the speculators may make more money. Not one move has been made to assure the farmers of a fair price for their products. If the government established a minimum and a maximum price for products, the farmers would know just where they are at. Under present conditions it is a leap in the dark, and nine chances in ten that many of the products will not bring enough to pay for production.

In our columns last fall and early winter we frequently called attention to the useless expenditure of money in the expedition into Mexico, and that it was unjust and uncalled for. We claimed that the raids along the border were no more chargeable to the Mexican Government than we would be if some outlaws from U. S. would get into Canada and burn and kill. To prove to you that we were right in our deductions and that our government had absolutely no license to envade Mexico, we ask you to read an article in the May 19, 1917, Saturday Evening Post, entitled "Jouncing Uncle Sam". If that does not open your eyes to the true condition down there, then you are a hopeless case. Mind you, Saturday Evening Post does no publish articles of that kind unless it knows them to be authentic.

We often hear the big newspapers of our country critized for withholding news that is derogatory to the moneyed interests, and that the common people do not get a fair deal. That this is true with respect to our large dailies cannot be doubted. The following will illustrate the point. It has just come to light that the greater part of the American people never heard that Tom Mooney, a labor leader in San Francisco, had been convicted, on perjured testimony, by a jury that was fixed for that special purpose by the big interests of the state, until news reached this country from Petrograd that the working people of that city had made an assault upon the American Embassy as a protest against this outrage against Mooney. It shows to what extent the newspapers are able to control public opinion. The moneyed interests control the newspapers and the newspapers control public opinion, so you can deduce what we get.

It is conceded by military experts and through students of history that an autocratic government is by far the most efficient when it comes to war. Our vocal patriots shout that we must get into this war because it is a fight of democracy against autocracy. If we concede that an autocracy is a better fighting machine than a democracy, then our chance for success are small, unless we change our form of government. We are either doomed to defeat, or we must establish in this country an autocracy, which we are rapidly doing. Then it will no longer be a fight between democracy and autocracy, but simply a case of world supremacy, whidh has been our contention from the first. If we win, we become the mightiest autocracy in the world. What guaranty has the people that we will ever get democracy any more. Dear reader, do you see what an awful hole we are in? Ponder over this and see what conclusion you come to.

Proving the Boast.

"Didn't you tell me your dog could lick anything in sight?"

"Sure I did. He's licking the sugar off the top of your cake now."

GERMAN RETREAT BLAZED BY TRAIL OF DESTRUCTION

American and English Correspondents Working Separately Agree in Reports of Ruin.

BURN SUPPLIES FOR THE POOR

Wells Poisoned and Defiled—Fruit and Shade Trees Cut Down—Houses Burned and Contents Looted and Wrecked.

London.—The skeptic who is unable to believe the reports of the absolute ruthlessness with which the Germans are doing their best to blot out that part of France from which they are retreating should compare the following dispatches, written by correspondents at the front, which supplement the official announcements of the British and French war offices.

These dispatches were sent by different correspondents, two American and two English. Of these one of each, an American and an Englishman, was with the British army, one of each with the French army. What they write about they saw with their own eyes. These men are experienced war correspondents and can differentiate between military damage, which every army must inflict to hamper the enemy, and malicious pillage.

A few of the things the Germans have done and are doing in Picardy and Artois, two of the loveliest of the provinces of France, are these: Burning supplies furnished for the starving population by the American relief commission, supplies bought by American gifts to help people impoverished by German invasion; poisoning and defiling with filth all the wells; cutting down all the fruit trees and shade trees; burning every house, regardless of its lack of military value; smashing pictures, crockery, furniture that they could not take off with them from the homes of the peasants; leaving these peasants, women, old men, children, with nothing to eat.

Looting Officially Ordered.

The first of these dispatches is from the Associated Press correspondent who advanced through this scene of desolation with the British troops. He is an American. This correspondent saw with his own eyes captured German orders for the looting, which ordered among other things that filth was to be assembled near all the wells abandoned to contaminate the water. He refers to the wanton destruction of the trees, which is more fully described in another dispatch. He writes:

"Wherever the British troops penetrate territory formerly held by the Germans they encounter the same conditions of destruction and devastation as in Bapaume and Peronne. Only a few villages have escaped, the Germans in these instances having been compelled to leave before their plans to lay waste could be carried out.

"The use of cavalry by the British and French seems to have taken the Germans by surprise, upsetting some of their calculations. In one village supper, which had been laid out, was abandoned, together with much ammunition, and in other places newly opened boxes of high explosives were found, with which the Germans had planned to destroy the villages before leaving. That the wholesale destruction was systematized in a manner characteristic of German thoroughness was shown by captured orders on the subject.

"These directed the blowing up of all houses, wells and cellars, except those occupied by rear guard outposts, the rear guard being held responsible for making their shelters uninhabitable before falling back. Farming implements were all burned or destroyed. Wherever a building was spared, it was first rendered filthy. The orders also directed the assembling of filth in the neighborhood of all wells for the purpose of contaminating the water.

"The destruction of fruit trees now apparently covers the entire belt of evacuated territory, even those clinging to the walls having been stripped off."

Wanton Destruction of Trees.

The wanton destruction of the trees is described also by the second American correspondent, who represents the Associated Press with the French army, in describing the following touching incident:

"Continuing our visit in Roye we encountered on the summit of the city an old man, tall, with white hair and mustache. He waved his arms, being incapable at first in his emotion of saying a word. He lived in the last house of the town, where he had spent the existence of a savage for two years, deciding not to see the Germans. Two days ago, realizing that something new was in preparation, he went up to the roof of his house and from afar saw masses of soldiers in blue, their helmets scintillating in the sun.

"'I was waiting for the French,' he said. 'I looked for their red trousers, but saw only men in unknown uniform. My blood turned. I said to myself: Are they more Germans? But suddenly from the small groups moving across the country came detonations. I understood they were the French warriors, the French clothed in blue, who had arrived.'

"We left the village under the guidance of this old man. The Germans, said he, had revenged themselves even on the fields. In fact everywhere the trees were cut down, all the apple trees from Roye to Champlen, and the fine trees along the Roiglise road suffered the same fate."

Lust of Destruction.

The correspondent of the London Times with the French army tells of the destruction wrought in Chauny, which was excusable for military reasons, and then continues to describe that which was not:

"But for the rest of their conduct there is no possible defense. In village after village, especially in Chauny itself, they burned whole rows of houses for no reason whatever except for pure spite and lust of destruction.

"House after house was pillaged, stripped as if by burglars. In every room that was not fired they had taken all the contents away, or more vilely still had smashed them to atoms.

"I have written these things before, when I myself have seen them in other sections of the line. I write about them again because I cannot impress too strongly the rest of the world that the power for this particular form of evildoing must be taken away from this uncivilized race. Even now, even in England and in France itself, people who have not seen with their own eyes seem not to realize what is being done here.

"One fact may bring it home to them. It is the latest invention of this generation of house breakers, the newest refinement of doing mischief. In the fields between Noyon and Chauny, many of which—a sure sign that the German retreat had not been foreseen until comparatively lately—had been carefully plowed and even sown, there were a considerable number of fruit trees. Every one of them within a certain distance of the road had been killed. They either have been sawed through a couple of feet from the ground and left lying where they fell or gashed and hacked three or four inches deep.

"This massacre of trees must have been carried out by at least three or four companies acting under the orders of their officers just before the retreat began, when the troops were in such a hurry that they even left behind stores of old metal which they had carefully collected. I want to insist upon this point, that it is clear that it is the officers of the German army who are responsible for this particular crime of tree mutilation."

Burned Supplies for the Poor.

The correspondent of the Times at British headquarters writes as follows:

"Old men, women and children, to whom the British were only a myth, welcomed the advance guards with tears.

"'Are you many?' asked one woman doubtfully of a staff officer.

"'We are two million now,' said the officer.

"The woman's relief and joy were fine to see.

"What these people wanted was food. They had hardly had any meat, butter or fat for months. They say the German soldiers are getting less to eat now and grumble a good deal.

"When the French troops arrived at Tergnier, where the Compaignie du Nord had large workshops and locomotive sheds, they found everything destroyed by dynamite.

"A Berlin telegram which describes the movements of the German withdrawal, says the greatest consideration was paid the inhabitants. The road from Chauny to Noyon was one continual stream of refugees from the villages beyond Chauny. They had been sacked and burned by the Germans. These poor refugees consisted exclusively of women, babies and small children. For weeks past the Germans had expelled them from village after village in preparation for the retreat. When the final moment came their houses were sacked and then burned before their eyes. The refugees were left helpless without food to await the French advance.

"At Noyon, owing to the fact that the Germans had concentrated there 10,000 women and children, they promised to leave the American relief commission sufficient supplies to feed them. Nevertheless, the last German patrols to leave Noyon completely sacked the American relief storehouse of everything eatable, and then dynamited the building. Finally they turned the canal water with which they had flooded the city into its ruins."

ARKANSAS DIAMOND MINES A BONANZA

Buffalo, Ark.—In spite of the fact that companies developing the mines near here make every effort to prevent any information leaking out as to the quantity of diamonds found, it is conservatively estimated that the number of the past twelve months is not less than 1,500. The largest diamond found is reported to have weighed 80 carats, uncut. The main bed consists of about 80 acres, although two smaller beds are being worked. The properties are surrounded by high barbed wire fences and under guard night and day.

Notice.

On June 1st a penalty of 10 per cent is added to all unpaid Real Estate Tax, but in case one-half of the amount of the tax on any real estate shall be paid before June 1st of each year then no penalty is added, providing that the remaining half of said tax shall be paid before the 1st day of November of each year, if said remaining one-half of said tax is not paid before November 1st of each year, then a penalty of 10 per cent is added to the one half of said tax remaining unpaid: Taxes become delinquent on the first day of January next, when an additional penalty of 5 per cent is added. Tax sales take place on the first Monday of May following and the amount of sale draws interest at the rate of one per cent a month until redeemed. If not redeemed within three years from the date of sale, all lands become the absolute property of the state or purchaser.

Theo. H. Liden,
County Treasurer.

RUSSIAN IS CALLED MYSTIC

His Character on Surface Seems to Be Readily Grasped But He Furnishes Surprise, Says Novelist.

Hugh Walpole has been much in Russia during the past two momentous years, says the London Mail. He has the keenest interest in Russia as a nation and the Russians as a people, apart from the service they are giving as a powerful unit in the allied repulse to German aggression. From first to last he has found Russia an object of study and in many ways a problem. The following analysis, taken bodily from his novel, "The Dark Forest," reveals the very spirit of Russia:

"However deeply a Russian may admit an Englishman into friendship, he can, to the very last, puzzle, confuse and utterly surprise him. The Russian character seems, superficially with its lack of restraint, its idealism, its impracticability, its mysticism, its material simplicities, to be so readily grasped, that the surprise that finally remains is the more dumfounding. Perhaps, after all, it is the very closeness of our resemblance the one to the other that confuses us. It is, perhaps, that in the Russian soul the East can never be reconciled to the West; that the Russian never reveals his sacred ideal, even to himself; far distant is it then from his friend. Whatever it be, the surprise remains. For to those whom Russia and her people draw back again and again, however strongly they resist, the sure truth stands: that here there is a mystery, a mystery that may never be discovered. In the very soul of Russia the mystery is stirring; the restlessness, the greatness, the disappointment, the vision of the pursuit is nothing."

We will print Dr. Edward Everett Hale's Patriotic masterpiece, entitled

The Man Without
a
Country

Every real American, foreign or native born, should read this story at this time, even though he may have read it before.

It is an inspiration and a lesson for this hour of national crisis.

We want every reader of this paper to read this wonderful story.

CURRENT WIT and HUMOR

Acting a Part.

"Do you see that mailman over there?" asked the poet.

"Why, certainly."

"A secret understanding exists between that fellow and myself."

"Of what nature?"

"He has been delivering mail at my door for years, and every time he hands me a rejected manuscript he pretends to believe it is something else and I pretend to believe what he pretends."

Rather Strong Hint.

"If I had an office furnished as luxurious as yours," said the visitor, as he sank into a big leather chair, "I wouldn't mind staying in it all day."

"Oh," replied the man of affairs. "It isn't the furniture of a man's office that gets on his nerves, but the people who mistake it for a club."

Thereupon the visitor bethought him of an engagement and withdrew.

Quite Appropriate.

"I see where a writer calls a modern skyscraper a 'beehive.' Rather good, eh?"

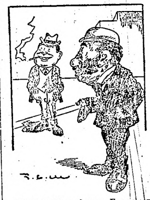
"The term certainly is applicable to the particular building in which Beetum and Skinnum have their offices," answered the melancholy man. "I was badly stung there."

Fortunate.

Percy—I—aw—wondah why Miss Winsome is—aw—always out when I call?

Jack—Oh, that girl was born under a lucky star.

ONE EXCEPTION



"Don't be too cocksure. You remember the fellow who refused to pick up a pocketbook on April first and missed a comfortable roll of greenbacks?"

"My experience convinces me that he got the only genuine one ever left lying around loose on that day."

What Do They Care?

Serve eggs in 47 ways
And give each dish a foreign name;
Sir Rooster 'round the barnyard strays,
Dame Partlet's mood is still the same.

Good Advice.

"My soul is filled with poetry," said the temperamental young woman.

"Keep it there, my dear," answered the fatherly old gentleman, "and be happy. Don't get the idea, because there are so many magazines published in this country, that you ought to share the poetry of your soul with the lowbrowed reading public."

Filling the Order.

The old sport sat in a cushioned chair, in a swell downtown cafe, and cast his eye o'er the bill of fare, then to the waiter did say: "You may bring me everything that is there, for I've got oodles of cash," but the waiter never turned a hair, as he brought him a plate of hash.

Power of Wealth.

"Has your daughter made her debut yet?" asked Mrs. Uppson.

"Mercy, no!" exclaimed Mrs. Newrich. "And what's more, she doesn't have to make it. Her father can afford to have one made to order for her."

Point of View.

"Miss Buddington is certainly a very clever girl," said the young man.

"Does she say clever things?" asked his companion.

"Oh, no," was the reply, "but she immediately sees the point when I say them."

Somewhat Hazy.

"I dislike those slang words 'half-lit' and 'lit' used to denote intoxication," said the purist. "In one sense they are not at all applicable to a man in that condition, because the more he is illuminated, the less he is able to throw light on any given subject."

The Man Without A Country

By Edward Everett Hale

[No document in actual American history conveys a more powerful lesson of what citizenship in this republic means, none delivers a more searching appeal to loyalty, than this fanciful recital of the Man Without a Country. The unhappy creature whose living death it has graved upon the memory of mankind was but a figure born of a writer's imagination. Yet, the account of his passionate outburst and of his dreadful expiation stirs the dullest soul, and will awaken emotion in the minds of readers of generations yet unborn. There can be no more arresting lesson for the disloyal or the heedless, no more inspiring appeal to the spirit of true Americanism, than this memorable work of literary art and high-souled patriotism.]

I suppose that very few casual readers of the New York Herald of August 13th observed, in an obscure corner, among the "Deaths," the announcement:

"NOLAN. Died, on board U. S. Corvette Levant, Lat. 2° 11" S., Long. 131° W., on the 11th of May, Philip Nolan."

I happened to observe it, because I was stranded at the old Mission-house in Mackinac, waiting for a Lake Superior steamer which did not choose to come, and I was devouring, to the very stubble, all the current literature I could get hold of, even down to the deaths and marriages in the "Herald." My memory for names and people is good, and the reader will see, as he goes on, that I had reason enough to remember Philip Nolan. There are hundreds of readers who would have paused at that announcement, if the officer of the Levant who reported it had chosen to make it thus: "Died, May 11th, 'The Man without a Country.'" For it was as "The Man without a Country" that poor Philip Nolan had generally been known by the officers who had him in charge during some fifty years, as, indeed, by all the men who had sailed under them. I dare say there is many a man who has taken wine with him once a fortnight, in a three years' cruise, who never knew that his name was "Nolan," or whether the poor wretch had any name at all.

There can now be no possible harm in telling this poor creature's story. Reason enough there has been till now, ever since Madison's administration went out in 1817, for very strict secrecy, the secrecy of honor itself, among the gentlemen of the navy who have had Nolan in successive charge. And certainly it speaks well for the esprit de corps of the profession and the personal honor of its members, that to the press this man's story has been wholly unknown, and, I think, to the country at large also.

I have reason to think, from some investigations I made in the naval archives when I was attached to the bureau of construction, that every official report relating to him was burned when Ross burned the public buildings at Washington. One of the Tuckers, or possibly one of the Watsons, had Nolan in charge at the end of the war; and when, on returning from his cruise, he reported at Washington to one of the Crowninshields—who was in the navy department when he came home—he found that the department ignored the whole business. Whether they really knew nothing about it, or whether it was a non mi ricordo, determined on as a piece of policy, I do not know. But this I do know, that since 1817, and possibly before, no naval officer has mentioned Nolan in his report of a cruise.

As I say, there is no need for secrecy any longer. And now the poor creature is dead, it seems to me worth while to tell a little of his story, by way of showing young Americans of today what it is to be

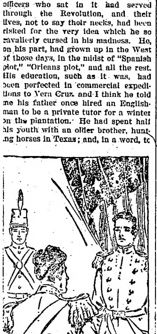
A MAN WITHOUT A COUNTRY.

Philip Nolan was as fine a young officer as there was in the "Legion of the West," as the western division of our army was then called. When Aaron Burr made his first dashing expedition down to New Orleans in 1805, at Fort Massac, or somewhere above on the river, he met, as the devil would have it, this gay, dashing, bright young fellow, at some dinner party, I think. Burr marked him, talked to him, walked with him, took him a day or two's voyage in his flatboat, and, in short, fascinated him. For the next year barrack life was very tame to poor Nolan. He occasionally availed of the permission the great man had given him to write to him. Long, high-worded, stilted letters the poor boy wrote and re-wrote and copied. But never a line did he have in reply from the gay deceiver. The other boys in the garrison sneered at him, because he sacrificed in this unrequited affection for a politician the time which they devoted to Monongahela, sledge, and high-low-jack. Bourbon, euchre, and poker were still unknown. But one day Nolan had his revenge. This time Burr came down the river, not as an attorney seeking a place for his office, but as a disguised conqueror. He had defeated I know not how many district attorneys; he had dined at I know not how many public dinners; he had been heralded in I know not how many Weekly Arguses; and it was rumored that he had an army behind him and an empire before him. It was a great day—his arrival—to poor Nolan. Burr had not been at the fort an hour before he sent for him. That evening he asked Nolan to take him out in his skiff, to show him a cane-brake or a cottonwood tree, as he said, really to seduce him; and by the time the sail was over, Nolan was enlisted body and soul. From that time, though he did not yet know it, he lived as "A Man without a Country."

What Burr meant to do I know no more than you, dear reader. It is none of our business just now. Only, when the grand catastrophe came, and Jefferson and the House of Virginia of that day undertook to break on the wheel all the possible Clarences of the then House of York, by the great treason trial at Richmond, some of the lesser fry in that distant Mississippi valley, which was farther from us than Puget Sound is today, introduced the like novelty on their provincial stage, and, to while away the monotony of the summer at Fort Adams, got up, for spectacles, a string of court-martials on the officers there. One and another of the colonels and majors were tried, and, to fill out the list, little Nolan, against whom, heaven knows, there was evidence enough, that he was sick of the service, had been willing to be false to it, and would have obeyed any order to march anywhither with anyone who would follow him, had the order only been signed, "By command of His Exc. A. Burr." The courts dragged on. The big flies escaped, rightly for all I know. Nolan was proved guilty enough, as I say; yet you and I would never have heard of him, reader, but that, when the president of the court asked him at the close, whether he wished to say anything to show that he had always been faithful to the United States, he cried out, in a fit of frenzy:

"D——n the United States! I wish I may never hear of the United States again!"

I suppose he did not know how the words shocked old Colonel Morgan, who was holding the court. Half the officers who sat in it had served through the Revolution, and their lives, not to say their necks, had been risked for the very idea which he so cavalierly cursed in his madness. He, on his part, had grown up in the West of those days, in the midst of "Spanish plot," "Orleans plot," and all the rest. His education, such as it was, had been perfected in commercial expeditions to Vera Cruz, and I think he told me his father once hired an Englishman to be a private tutor for a winter on the plantation. He had spent half his youth with an older brother, hunting horses in Texas; and, in a word, to him "United States" was scarcely a reality. Yet he had been fed by "United States" for all the years since he had been in the army. He had sworn on his faith as a Christian to be true to "United States." It was "United States" which gave him the uniform he wore, and the sword by his side. Nay, my poor Nolan, it was only because "United States" had picked you out first as one of her own confidential men of honor, that "A. Burr" cared for you a straw more than for the flatboat men who sailed his ark for him. I do not excuse Nolan; I only explain to the reader why he damned his country, and wished he might never hear her name again.



"I Wish I May Never Hear of the United States Again!"

He never did hear her name but once again. From that moment, September 23, 1807, till the day he died, May 11, 1863, he never heard her name again. For that half century and more he was a man without a country.

Old Morgan, as I said, was terribly shocked. If Nolan had compared George Washington to Benedict Arnold, or had cried, "God save King George," Morgan would not have felt worse. He called the court into his private room, and returned in fifteen minutes, with a face like a sheet, to say:

"Prisoner, hear the sentence of the court. The court decides, subject to the approval of the president, that you never hear the name of the United States again."

Nolan laughed. But nobody else laughed. Old Morgan was too solemn, and the whole room was hushed dead as night for a minute. Even Nolan lost his swagger in a moment. Then Morgan added: "Mr. Marshal, take the prisoner to Orleans in an armed boat, and deliver him to the naval commander there."

The marshal gave his orders, and the prisoner was taken out of court.

"Mr. Marshal," continued old Morgan, "see that no one mentions the United States to the prisoner. Mr. Marshal, make my respects to Lieutenant Mitchell at Orleans, and request him to order that no one shall mention the United States to the prisoner while he is on board ship. You will receive your written orders from the officer on duty here this evening. The court is adjourned without day."

I have always supposed that Colonel Morgan himself took the proceedings of the court to Washington City, and explained them to Mr. Jefferson. Certain it is that the president approved them, certain, that is, if I may believe the men who say they have seen his signature.

The plan then adopted was substantially the same which was necessarily followed ever after. Perhaps it was suggested by the necessity of sending him by water from Fort Adams and Orleans. The secretary of the navy was requested to put Nolan on board a government vessel bound on a long cruise, and to direct that he should be only so far confined there as to make it certain that he never saw or heard of the country. We had few long cruises then, and the navy was very much out of favor; and as almost all of this story is traditional, as I have explained, I do not know certainly what his first cruise was. But the commander to whom he was intrusted—perhaps it was Tingey or Shaw, though I think it was one of the younger men—we are all old enough now—regulated the etiquette and the precautions of the affair, and according to his scheme they were carried out, I suppose, till Nolan died.

When I was second officer of the Intrepid some thirty years after, I saw the original paper of instructions. I have been sorry ever since that I did not copy the whole of it. It ran, however, much in this way:

"Washington," (with the date, which must have been late in 1807).

"Sir—You will receive from Lieutenant Neale the person of Philip Nolan, late a lieutenant in the United States army.

"This person on his trial by court-martial expressed with an oath the wish that he might never hear of the United States again.

"The court sentenced him to have his wish fulfilled.

"For the present, the execution of the order is intrusted by the president of this department.

"You will take the prisoner on board your ship, and keep him there with such precautions as shall prevent his escape.

"You will provide him with such quarters, rations, and clothing as would be proper for an officer of his late rank, if he were a passenger on your vessel on the business of his government.

"The gentlemen on board will make any arrangements agreeable to themselves regarding his society. He is to be exposed to no indignity of any kind nor is he ever unnecessarily to be reminded that he is a prisoner.

"But under no circumstances is he ever to hear of his country or to see any information regarding it; and you will especially caution all the officers under your command to take care that, in the various indulgences which may be granted, this rule, in which his punishment is involved, shall not be broken.

"It is the intention of the government that he shall never again see the country which he has disowned. Before the end of your cruise you will receive orders which will give effect to this intention.

"Respectfully yours,

"W. SOUTHARD,

"for the Secretary of the Navy."

If I had only preserved the whole of this paper, there would be no break in the beginning of my sketch of this story. For Captain Shaw, if it was he, handed it to his successor in the charge, and he to his.

The rule adopted on board the ships on which I have met "The Man without a Country" was, I think, transmitted from the beginning. No mess liked to have him permanently, because his presence cut off all talk of home or of the prospect of return, of politics or letters, of peace or of war—cut off more than half the talk men like to have at sea. But it was always thought too hard that he should never meet the rest of us, except to touch hats, and we finally sank into one system. He was not permitted to talk with the men unless an officer was by. With officers he had unrestrained intercourse, as far as they and he chose. But he grew shy, though he had favorites: I was one. Then the captain always asked him to dinner on Monday. Every mess in succession took up the invitation in its turn. According to the size of the ship, you had him at your mess more or less often at dinner. His breakfast he ate in his own stateroom, he always had a stateroom, which was where a sentinel, or somebody on the watch, could see the door. And whatever else he ate or drank he ate or drank alone. Sometimes, when the marines or sailors had any special jollification they were permitted to invite "Plain-Buttons," as they called him. Then Nolan was sent with some officer, and the men were forbidden to speak of home while he was there. They called him "Plain-Buttons," because, while he always chose to wear a regulation army uniform, he was not permitted to wear the army button, for the reason that it bore either the initials or the insignia of the country he had disowned.

I remember, soon after I joined the navy, I was on shore with some of the older officers from our ship and from the Brandywine, which we had met at Alexandria. We had leave to make a party and go up to Cairo and the Pyramids. As we jogged along some of the gentlemen fell to talking about Nolan, and someone told the system which was adopted from the first about his books and other reading. As he was almost never permitted to go on shore, even though the vessel lay in port for months, his time, at the best, hung heavy; and everybody was permitted to lend him books, if they were not published in America and made no allusion to it. These were common enough in the old days, when people in the other hemisphere talked of the United States as little as we do of Paraguay. He had almost all the foreign papers that came into the ship, sooner or later; only somebody must go over them first, and cut out any advertisement or stray paragraph that alluded to America. Right in the midst of one of Napoleon's battles, or one of Canning's speeches, poor Nolan would find a great hole, because on the back of the page of that paper there had been an advertisement of a packet for New York, or a scrap from the president's message. I say this was the first time I ever heard of this plan, which afterwards I had enough, and more than enough, to do with. I remember it, because poor Phillips, who was of the party, as soon as the allusion to reading was made, told a story of something which happened at the Cape of Good Hope on Nolan's first voyage; and it is the only thing I ever knew of that voyage. They had touched at the Cape, and had done the civil thing with the English admiral and the fleet, and then, leaving for a long cruise up the Indian ocean, Phillips had borrowed a lot of English books from an officer, which, in those days, as indeed in these, was quite a windfall. Among them, as the Devil would order, was the "Lay of the Last Minstrel," which they had all of them heard of, but which most of them had never seen. I think it could not have been published long. Well, nobody thought there could be any risk of anything national in that, though Phillips swore old Shaw had cut out the "Tempest" from Shakespeare before he let Nolan have it, because he said, "The Bermudas ought to be ours and, by Jove, should be one day." So Nolan was permitted to join the circle one afternoon when a lot of them sat on deck smoking and reading aloud. People do not do such things so often now, but when I was young we got rid of a great deal of time so. Well, so it happened that in his turn Nolan took the book and read to the others; and he read very well, as I know. Nobody in the circle knew a line of the poem, only it was all magic and border chivalry, and was ten thousand years ago. Poor Nolan read steadily through the fifth canto, stopped a minute and drank something, and then began, without a thought of what was coming—

Breathes there the man, with soul so dead,
Who never to himself hath said—

It seems impossible to us that anybody ever heard this for the first time; but all these fellows did then, and poor Nolan himself went on, still unconsciously or mechanically—

This is my own, my native land!

Then they all saw something was to pay; but he expected to get through, I suppose, turned a little pale, but plunged on—

Whose heart hath ne'er within him burned,
As home his footsteps he hath turned
From wandering on a foreign strand?—
If such there breathe, go, mark him well.

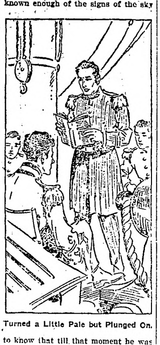
By this time the men were all beside themselves, wishing there was any way to make him turn over two pages; but he had not quite presence of mind for that; he gagged a little, colored crimson, and staggered on:

For him no minstrel raptures swell;
High though his titles, proud his name,
Boundless his wealth as wish can claim;
Despite these titles, power and pelf,
The wretch, concentered all in self,—

and here the poor fellow choked, could not go on, but started up, swung the book into the sea, vanished into his stateroom, "and by Jove," said Phillips, "we did not see him for two months again. And I had to make up some beggarly story to that English surgeon why I did not return his Walter Scott to him."

That story shows about the time when Nolan's braggadocio must have broken down. At first, they said, he took a very high tone, considered his imprisonment a mere farce, affected to enjoy the voyage, and all that; but Phillips said that after he came out of his stateroom he never was the same man again. He never read aloud again, unless it was the Bible or Shakespeare, or something else he was sure of. But it was not that merely. He never entered in with the other young men exactly as a companion again. He was always shy afterward, when I knew him—very seldom spoke, unless he was spoken to, except to a very few friends. He lighted up occasionally, I remember late in his life hearing him fairly eloquent on something which had been suggested to him by one of Flechier's sermons, but generally he had the nervous, tired look of a heart-wounded man.

When Captain Shaw was coming home—if, as I say, it was Shaw—rather to the surprise of everybody they made one of the Windward islands, and lay off and on for nearly a week. The boys said the officers were sick of salt junk, and meant to have turtle soup before they came home. But after several days the Warren came to the same rendezvous; they exchanged signals; she sent to Phillips and these homeward-bound men letters and papers, and told them she was outward bound, perhaps to the Mediterranean, and took poor Nolan and his traps on the boat back to try his second cruise. He looked very blank when he was told to get ready to join her. He had known enough of the signs of the sky to know that till that moment he was going "home." But this was a distinct evidence of something he had not thought of, perhaps, that there was no going home for him, even to a prison. And this was the first of some twenty such transfers, which brought him sooner or later into half our best vessels, but which kept him all his life at least some hundred miles from the country he had hoped he might never hear of again.



Turned a Little Pale but Plunged On.

It may have been on that second cruise—it was once when he was up the Mediterranean—that Mrs. Graff, the celebrated Southern beauty of those days, danced with him. They had been lying a long time in the Bay of Naples, and the officers were very intimate in the English fleet, and there had been great festivities, and our men thought they must give a great ball on board the ship. How they ever did it on board the Warren I am sure I do not know. Perhaps it was not the Warren, or perhaps ladies did not take up so much room as they do now. They wanted to use Nolan's stateroom for something, and they hated to do it without asking him to the ball; so the captain said they might ask him, if they would be responsible that he did not talk with the wrong people, "who would give him intelligence." So the dance went on, the finest party that had ever been known, I dare say; for I never heard of a man-of-war ball that was not. For ladies they had the family of the American consul, one or two travelers who had adventured so far, and a nice bevy of English girls and matrons, perhaps Lady Hamilton herself.

Well, different officers relieved each other in standing and talking with Nolan in a friendly way, so as to be sure that nobody else spoke to him. The dancing went on with spirit, and after a while even the fellows who took this honorary guard of Nolan ceased to fear any contretemps. Only when some English lady—Lady Hamilton, as I said, perhaps, called for a set of "American dancers," an odd thing happened. Everybody then danced contredances. The black band, nothing loath, conferred as to what "American dances" were, and started off with "Virginia Reel," which they followed with "Money-Musk," which, in its turn in those days, should have been followed by "The Old Thirteen." But just as Dick, the leader, tapped for his fiddlers to begin, and bent forward, about to say, in true negro state, "'The Old Thirteen,' gentlemen and ladies!" as he had said, "'Virginny Reel,' if you please!" "'Money-Musk,' if you please!" the captain's boy tapped him on the shoulder, whispered to him, and he did not announce the name of the dance; he merely bowed, began on the air, and they all fell to, the officers teaching the English girls the figure, but not telling them why it had no name.

But that is not the story I started to tell. As the dancing went on, Nolan and our fellows all got at ease, as I said, so much so that it seemed quite natural for him to bow to that splendid Mrs. Graff, and say:

"I hope you have not forgotten me, Miss Rutledge. Shall I have the honor of dancing?"

He did it so quickly that Shubrick, who was by him, could not hinder him. She laughed and said:

"I am not Miss Rutledge any longer, Mr. Nolan; but I will dance all the same," just nodded to Shubrick, as if to say he must leave Mr. Nolan to her, and led him off to the place where the dance was forming.

Nolan thought he had got his chance. He had known her at Philadelphia, and at other places had met her, and this was a godsend. You could not talk in contredances, as you do in cotillions, or even in the pauses of waltzing; but there were chances for tongues and sounds, as well as for eyes and blushes. He began with her travels, and Europe, and Vesuvius, and the French; and then, when they had worked down, and had that long talking time at the bottom of the set, he said boldly, a little pale, she said, as she told me the story, years after:

"And what do you hear from home, Mrs. Graff?"

And that splendid creature looked through him. Jove! how she must have looked through him! "Home!! Mr. Nolan!!! I thought you were the man who never wanted to hear of home again!" and she walked directly up the deck to her husband, and left poor Nolan alone, as he always was.—He did not dance again.

I cannot give any history of him in order; nobody can now; and, indeed, I am not trying to. These are the traditions, which I sort out, as I believe them, from the myths which have been told about this man for forty years. The fellows used to say he was the "Iron Mask;" and poor George Pons went to his grave in the belief that this was the author of "Junius," who was being punished for his celebrated libel on Thomas Jefferson. Pons was not very strong in the historical line. A happier story than either of these I have told is of the war. That came along soon after. I have heard this affair told in three or four ways, and, indeed, it may have happened more than once. But which ship it was on I cannot tell. However, in one, at least, of the great frigate duels with the English, in which the navy was really baptized, it happened that a round shot from the enemy entered one of our ports square, and took right down the officer of the gun himself, and almost every man of the gun's crew. Now you may say what you choose about courage, but that is not a nice thing to see. But as the men who were not killed picked themselves up, and the surgeon's people were carrying off the bodies, there appeared Nolan, in his shirt sleeves, with the rammer in his hand, and, just as if he had been the officer, told them off with authority, who should go to the cockpit with the wounded men, who should stay with him, perfectly cheery, and with that way which makes men feel sure all is right and is going to be right. And he finished loading the gun with his own hands, aimed it, and bade the men fire. And there he stayed, captain of that gun, keeping those fellows in spirits, till the enemy struck, sitting on the carriage while the gun was cooling, though he was exposed all the time, showing them easier ways to handle heavy shot, making the raw hands laugh at their own blunders, and when the gun cooled again, getting it loaded and fired twice as often as any other gun on the ship. The captain walked forward, by way of encouraging the men, and Nolan touched his hat and said:

"I am showing them how we do this in the artillery, sir."

And this is a part of the story where all the legends agree; that the commodore said:

"I see you do, and I thank you, sir; and I shall never forget this day, sir, and you never shall, sir."

And after the whole thing was over and he had the Englishman's sword in the midst of the state and ceremony of the quarterdeck, he said:

"Where is Mr. Nolan? Ask Mr. Nolan to come here."

And when Nolan came, the captain said:

"Mr. Nolan, we are all very grateful to you today; you are one of us today; you will be named in the despatches."

And then the old man took off his own sword of ceremony, and gave it to Nolan, and made him put it on. The man told me this who saw it. Nolan cried like a baby, and well he might. He had not worn a sword since that infernal day at Fort Adams. But always afterward, on occasions of ceremony, he wore that quaint old French sword of the commodore.

The captain did mention him in the despatches. It was always said he asked that he might be pardoned. He wrote a special letter to the secretary of war. But nothing ever came of it. As I said, that was about the time when they began to ignore the whole transaction at Washington, and when Nolan's imprisonment began to carry itself on because there was nobody to stop it without any new orders from home.

I have heard it said that he was with Porter when he took possession of the Nukahiwa islands. Not this Porter, you know, but old Porter, his father, Essex Porter, that is, the old Essex Porter, not this Essex. As an artillery officer, who had seen service in the West, Nolan knew more about fortifications, embrasures, ravelins, stockades, and all that, than any of them did; and he worked with a right good will in fixing that battery all right. I have always thought it was a pity Porter did not leave him in command there with Gamble. That would have settled all the question about his punishment. We should have kept the islands, and at this moment we should have one station in the Pacific ocean. Our French friends, too, when they wanted this little watering place, would have found it was pre-occupied. But Madison and the Virginians, of course, flung all that away.

(To be Concluded Next Week.)

Dr. F. H. Gambell, 'phone No. 140. Thief River Falls, Minn.

Wm Richards of Dent, Minnesota arrived here Friday to look after his farming interests here.

Mr. and Mrs. A. O Halvorson autoed to Gary, Minn Friday afternoon to see if any of their property was destroyed in the fire which wiped out nearly the whole town.

Mr. and Mrs. H. A. Halvorson and family autoed to Winger. Saturday afternoon for a short visit with relatives.

ESTRAYED—From Ole O. Sunsdahl place, 9 head of young cattle, 4, 2 year old heifers, 1 red bull, 1 year old, other yearlings red and white spotted.

Mr. and Mrs. Nick Bundhund spent Sunday at the Wm. Parnow home at Kratka.

Mr. and Mrs. R. H. McDonald and family spent Sunday at the Holbrook home at Grygla. Mr. Holbrook came down in his Buick to get them.

P. C. Wold of Kratka was a business visitor in town Wednesday.

Steve Singer of Kratka was attending to business matters in town Tuesday and Wednesday.

Rev. Paul B. Walenta will conduct English services in the old school house here every Sunday evening until further notice. Services will commence at 7:45 sharp. Every one welcome to attend these services.

Rev. O. P Stavaas of Thief River Falls conducted services in the Synod church here Sunday afternoon.

Fred DuChamp of Mavie was a business visitor in town Tuesday.

John Foss and August Anderson autoed to Thief River Falls Friday afternoon.

M. Tunick has leased the Guinan land south of town and will use it for pasturing out stock. Work of fencing in the land has already commenced.

George Schwandt, of the Mavie Mercantile Co. was a business visitor in town Tuesday.

Rev. Paul B Walenta of Princeton Theological Seminary of Princeton, N. J. arrived here last week and will take charge of the English speaking congregations here and at Grygla.

P. P. Sund, the Esplee merchant, vas transacting business in town the ore part of the week.

Dave Gavin of Mavie was a Good- isitor Tuesday.

M. Tunick shipped a car load of tock from here to South St. Paul turday.

P. P. Palmer was a Thief River Falls isitor Monday afternoon.

A number of Goodridge young people ttended a barn dance at the Gunderson rm Tuesday evening. Music was rnished by Ben Semansky of High- nding and a very enjoyable time was d by all present.

Mr. and Mrs. C. N. Jacobson and mily, former residents of this village rived here last Friday, to visit at the me of Mrs. Jacobson's parents near re.

Rev. Fr. Noesen of Thief River Falls d Rev Fr. Berger of Tabor concted services in the Catholic church re Tuesday.

Rev. Fr. Noesen will conduct services St. Ann's Catholic church here Tues- June 12th, alson again on Tuesda ne 26th.

Rev. O. C. Schultz will conduc glish services in the Erie church day June 10th at 11 o'clock A. M are invited to attend.

Jordshaugen Bros. left Monday e auto route for North Dakota.

arl Lindstrom was a business tor at the A. T. Olson home near Landing. Sunday evening.

City and Farm Property for sale. Goodridge Land Co. Call at the Farmers State BanK.

Will sell or exchange for property in Thief River Falls the following land, Lot 4 in Section 30 and Lots 1, 2, 3 and NE¼ SW¼ in Sections 31-155-39.

H. O. Kjomme, Thief River Falls, Minnesota.

We will buy your potatoes, and will pay the highest market price.

Tessum Seed Grain and Supply Co.

Goodridge.

Dr. Froelich of Thief River Falls was called up here Tuesday to attend to Alice Stephenson who was taken sick. Upon examination it turned out to be Scarlet fever. The little one was taken to the old Gunderson resident west of town where she will remain until she is over her sickness This precaution was taken in order to prevent the disease from spreading.

Scrap Iron Wanted.

Until June 25th I will pay $5.50 per ton as I have a contract with the Thief River Hide & Fur Co., which expires about that time.

C. H. Rossmon.

Notice To The Public

All owners of live stock are hereby notified to keep their stock from running at large within the streets within the Village. Stock found at large on the streets will be taken up and the owner shall pay the penalty provided in the case.

By order, Village Council.

Stallion.

Will make the following stands with my fullblood Percheron stallion maximus 42170.

C. Elg, Erie, Monday
Edwin Hanson, Tuesday afternoon and Wednesday forenoon.
Ole A. Olsen, Reiner, Thursday
Reson and Yohn Livery barn, Saturday

Why not breed to a good horse and get a colt worth at least $25. to $50.00 more than a colt from a grade or scrub horse when of selling age.

S. Lysbakken.

There will be a dance ½ mile east of High Landing June 2nd. in a big new barn. Good Music. Everybody Welcome.

NOTICE.

Notice is hereby given that all dog owners are requested to get a license for their dogs at the office of the Village Council, before June 1st, 1917.

By order of the Village Council,
C. H. Christiansen,
Village Recorder.

NOTICE.

All persons are here notified that they will be given until Wednesday June 9th to clean the rubbish away from around their premises. If not done by this time the village will do the work and charge same to the person owning or renting the property.

By Order of The Board of Health.

Esplee News.

Andrew H. Speten and Louis Larson were in Goodridge last week.

There will be a meeting in the church 3 weeks from last Sunday June 17.

The Ladies Aid will meet at the home of Mr. and Mrs. Hoyum's June 6th.

Mabel Speten made a short call at Larson's last week.

We are having nice weather now but some are wishing for a shower or rain which will do good to the grain and gardens.

Charlie Johnson and Mr. Bogren visited at the Larson home last Monday.

Andrew Speten was in Goodridge Tuesday.

Embarrassment at Least.

Personally, we can think of nothing more disconcerting than to be an elderly man with some ready money and a liberal income, and to be counting up our wives some day and find one over, as is often the case with some persons.—Kansas City Star.

Farewell Party.

A farewell party was given last Friday evening in the school house for Misses Teresa Giefer, Stella Arndt and Lottie Foss who will leave shortly. Misses Giefer and Arndt, who are teachers in the local school will leave as soon as soon a school is out for their respective homes at Thief River Falls and High Landing. Miss Foss will leave shortly with the rest of the Foss family for Glendive, Mont. where they will make their future home.

The evening was spent in playing games after which a dainty lunch was served. The party broke up in the wee small hours of the morning feeling that they had spent a very enjoyable evening.

THE BEST DEFENDER IS THE SON OF A GOOD MOTHER.

Mothers of Minnesota and North Dakota, the nation has called upon your states to give young men to defend its honor on the sea. The Navy appeals to you in the name of patriotism to send your unmarried sons to the colors. It may be hard to see your son leave for the "First Line of Defence;" but it should be harder to see him stay at home and leave the defense of the nation to other hands. One hundred thousand American mothers have sons in the Navy now. Visit the nearest Navy Recruiting Station and find out for yourself what the navy offers your son, and how sorely the nation needs him. Mrs. E. W. Stewart of Elk River, Minn., gave her three sons to the Navy. Won't you send one.

The Navy Recruiting Station in Minneapolis is at 304 Marquette Ave.

Other Stations:

St. Paul, Minn., Commercial Building.
Duluth, Minn., St. Cloud, Minn.,
Virginia, Minn., Brainerd, Minn.,
Fargo, N. Dak., Grand Forks, N. Dak.
Minot, N. Dak, Bismark, N. Dak.,
Post Office Building.

"The war places a special responsibility upon health workers," is the admonition issued by Dr. F. J. Murphy of the Minnesota Public Health Association.

Continuing Dr. Murphy says, "Physicians and Nurses who have had training in health work are urged to remain at home. They can help win the war by enlisting in local health campaigns to a far greater degree than if they went to the front. It is estimated that the present force of health workers, particularly the sanatorium and dispensary workers of the state, will have to increased from fifty to one hundred per cent.

"Tuberculosis has increased at an alarming rate in all of the other countries at war the increase was especially noticeable in the countries that had not previously been equipped to handle a campaign against tuberculosis. Minnesota is apparently better equipped to cope with this emergency than any of her sister states Over sixty per cent of the population of this state, as represented by counties, is caring for its tuberculous. A corresponding proportion of the discharged cases can find suitable accomodations in the districts from which they were recruited; instead of returning to infect their friends and families they can be properly treated in their respective institutions. It is hoped that many of the counties which as yet have not started to build institutions will take steps to do so soon and anticipate an appropriation from the next legislature to reimburse them for the state's share of the building cost."

RECORD OF BIG IMPORTANCE

Small Amount of Work Required to Keep Books if Done Regularly—Profit or Loss Shown.

It is a good thing to keep records of all the farm operations. They may seem trivial at the time, yet some day are sure to be of great value and are a great help and satisfaction in clearing up difficulties that frequently arise. It requires only a small amount of work to keep them if the work is done regularly and systematically. The very fact that records are kept makes one careful of details and interested in making the things of which the records are kept turn out the best. It helps one to have a firm grasp on his affairs and to know just where he stands in all his work. He knows whether he is running his farm or any branch of his farming at a profit or at a loss.

In no branch of farming are records of more importance than in dairying. It is of actual money importance to know whether a cow is making a profit on the feed she consumes or is eating more than she is worth.

UNIFORMITY OF EGGS

Necessary to Have Them of Same Color and Large in Size.

Keep All Broody and Sitting Hens Away From Layers—Clean and Fresh Product Will Always Command Highest Prices.

(North Carolina Experiment Station.)

It is necessary to produce uniform colored eggs and to produce eggs of large size. To do this it is necessary to keep one breed and that breed pure. Do not cross the breeds as it does not produce a uniform product and is disastrous.

Do not send eggs to market that are dirty, too small, thin-shelled, from stolen nests or that have been set on. Keep your broody and sitting hens away from layers. If you do not want to set the hen when she becomes broody, make a coop 2 feet by 3 feet of slats or scrap lumber and put her in this coop till she no longer wants to set. If you want to set her, move her to a vacant room or a combination sitting and brooding coop.

Establish a Trade.

Remember saying a product is good does not make it so. If you send to market only eggs known to be absolutely fresh, your eggs will soon be called for. On the other hand, if you place among these eggs those from stolen nests, that have been under broody hens, eggs that are dirty and eggs kept on hand for a long time, your eggs will not command the highest prices, consequently, your returns will not be what they should be.

Flock of White Leghorns.

Eggs should be gathered once a day in the fall and winter and twice a day in the warmer part of the year. The eggs should be kept in a cool, dry room away from bad odors and dust.

Reject Dirty Eggs.

Eggs too small, checks and weak shell, dirty eggs or eggs from stolen nests or that have been set on should be rejected. These eggs should be used on the farm as they are sure to injure the trade. You cannot build up a first-class trade and accept this grade of eggs.

Eggs received by the cream route wagon should be graded into whites and browns. One case may be used for the whites and one for the browns or one end of the case may be used for white and the other end for browns. These eggs may be placed in cartons holding 12 eggs each.

PRUNE BEFORE BUDS SWELL

Trees Can Be Put in Fairly Good Shape by Careful Work—Cut Out Dead or Injured Wood.

(By W. G. BRIERLY, Minnesota Experiment Station.)

The orchard trees should be pruned before the buds begin to swell. Trees can be put into fairly good shape by careful work, but this must not be done all at once if it means the removal of a considerable quantity of wood. If properly done there will be no evil results and the work of spraying, thinning and harvesting will be made easier.

Make all cuts close up so that no stubs are left to die and start decay in the heart of the tree. After the wound is made, if it is more than three-quarters of an inch across, be sure to give it a good coat of paint, or of melted grafting wax.

Cut all dead or injured wood for a start and then remove some of the tangled crossing branches in the center. This will open up the center and give fruit of better color on the shady side of the tree. Some heading-back may be needed, but it will be best to leave that for another year if much wood has been removed. Following this plan will give moderate pruning, which will give best results.

Comes Anyhow.

"I want to get married. My occupation is in the electrical business; I'm a trouble seeker."

"Then get n[illegible] occupation's gone."

GETS LESSON IN PATRIOTISM

American Given Something to Think About by Italian Who Bought "Da Unita State Flag."

How many times the ignorant foreigners in this country have taught us the lesson of patriotism! An incident happened some time ago in New York city, says a writer in the New Bedford (Mass.) Standard.

Downtown there is a store where one can trade cigarette coupons for premiums. If you want cash, the coupons are worth half a cent apiece. The store is filled with glass cases, in which there are silver coffee urns, genuine chinaware, collar buttons, fish poles, etc.

I was cashing a number of coupons when a swarthy Italian entered and shuffled up to the counter. His hair looked as if it had never felt a comb. His hands and face were covered with mud from the building excavations across the street. In his fist he held a crumbled and greasy mass of coupons, which he shoved half timidly over the counter.

The girl clerk was a gum chewer. More than that, she was painted and powdered until her features resembled the side of a newly-painted barn.

"Whaddy yo wan'?" she chewed, eying the Italian closely from under her penciled eyebrows.

"Gimme da biga flag," he whispered.

It was the most natural thing in the world for the girl clerk to hand him a cheap Italian flag. The man touched it devotedly with his soiled fingers. A far-away look entered his eyes. "No dis a-one. I wan' de Unita State flag."

I left the store, gazing at my 89 cents rather shamefacedly.

HE IS ALWAYS ON THE JOB

Handy Young Man Among the Most Popular of Types That One Always Meets at Evening Party.

One of the most popular of the standard types you meet at an evening party is the handy young man. Generally his name is Arthur. He is one of the few old friends of George Host's bachelor days, who has passed the new wife's censorship. Arthur is always invited for holiday dinners and is considered to be one of the family. He knows where the ice pick is hidden, and he knows familiarly the three roaches who frisk in the kitchen sink. Arthur may always be relied upon to talk entertainingly to Mrs. Politikins, or Mary Ellen Scraggs, poor dears.

It is Arthur who always manages by some art, to fill that strange request for a glass of water, sure to be made by some lady. Arthur passes the sandwiches and Arthur is the person who notices that the woman in the blue foulard dress has no salad. Perhaps there is reward enough for Arthur when, overcoated, he bids the hostess good-night, to escort home a plain girl who came alone, and he is told that he is "such a dear," and "goodness knows what they ever would have done without him."—Helena Smith Dayton, in Cartoons Magazine.

Two Luxuries Unknown in 1815.

If we are to suffer restrictions unknown since the days of Waterloo, there are two of them which would have been no deprivation to our forebears of those hard times, says the London Chronicle. The tomato, it is true, was occasionally used as a relish for soups, but it was so small that they called it a berry, and the yellow kind was more in use than the red, while to the majority it was unknown. The banana was almost entirely known by hearsay only, and a striking legend regarding it was more familiar than the fruit itself. For it was freely reported that in Madeira the natives refused to cut it with a knife because on dissection lengthwise it presented a semblance of the crucifixion.

New Idea in Clocks.

Every now and then some enterprising manufacturer tries to make the humble alarm clock attractive by getting it out in a new form. While the seven o'clock bell will probably never become popular, the latest form is a very convenient and handsome one. The new clock is electric, both in the alarm and timekeeping system. It is run by a battery and just below the face of the clock is a tiny electric light. A switch on a flexible cord is attached. The switch may be carried to the head of the bed and in order to see the time at night, a touch on the button lights the lamp, which illuminates the face of the clock.

Woman Cooks for Armies.

From England has come news that the suggestion of attaching women as cooks and caterers to British regiments was received so favorably that it is now being seriously considered, and when objection is made that such a thing has not been heard of before in civilized armies, it has been pointed out that before the days of Florence Nightingale it was an unheard-of thing for women to take charge of hospital work in the field.

Where Finest Opals Are Found.

According to some authorities there is only one locality in the world where the finest kind of opals are found. It is the Dubnyik mine, near Czerwenitza, in Hungary. At any rate, opals have been taken from that mine for many centuries. The ancient writers speak of opals coming from India, but the precious variety is not now found there, whatever may have been the case in the past.

Careless.

It is the law of a school in a town near Boston that only children born in that town shall attend. One little girl in this town was born while her parents were at their vacation in the country. This made her ineligible as a pupil of this school. In telling a playmate about it when she was old enough the child said: "You see, I was born while I was on my vacation."—Christian Herald.

Casting Iron Pipes.

Casting iron pipe in a permanent mold without cores is effected by a Brazilian iron worker by means of a centrifugal machine. The molten metal is run into the revolving mold from a horizontal trough, and water cooling quickly sets it so that it can be removed. The claims made are rapidity, economy, and a product superior to that ordinarily cast in sand molds.

Expecting Too Much.

The girl who expects her friends to be perfect has many a disappointment in store. Human nature is full of surprises, but perfection would be the greatest surprise of all. Do not be astonished when you discover some little flaw in your friend's character. For unless love has blinded her, it is very certain that she has discovered a similar flaw in yourself.

Without Aid.

Dobbins had been very sick and the doctor was called once more to hurry to his bedside. He hurried as fast as he could and arrived out of breath. "Am I in time to be of any assistance?" he panted. "Nope, you're too late, doc," answered one of the lodge watchers. "He has made it by himself."

In Westminster Abbey.

Westminster abbey is the burial place of 13 kings of England, including Henry III, Edward I, Edward III, Richard II, Henry V, Henry VII, Edward VI, James I, Charles II, William III, and George II, as well as of five queens in their own right, and the queens of many of the kings.

A Bit Slow.

"How are the incubators getting along?" asked a friend of his neighbor who had recently bought some. "Why, all right, I suppose; but although I have had them for two weeks now, not one of the four has laid an egg yet."—Ladies' Home Journal.

To Treat a Cold.

Camphor is excellent for colds and should be taken in this manner: A drop or two of camphor should be dropped on a lump of sugar which should be placed in a small wineglassful of water and a teaspoonful of this mixture taken every two hours.

Past Tence.

The original forests of the United States were larger in extent, greater in quantity of standing timber and more diversified in useful tree species than those of any other region on earth.—New York Telegram.

Good for "Nerves."

Onions furnish the most substantial cure for nervous prostration and all other nerve disorders. Lettuce has a soothing effect on the nerves. Celery is said to be most excellent for nervous troubles.

Why Seven Is Thought Lucky.

Seven is generally regarded as a lucky number because it is sacred to Apollo. The story goes that at the birth of this great deity seven sacred swans circled about his godhead.

Affectation.

Affectation is an awkward and forced imitation of what should be genuine and easy, wanting the beauty that accompanies what is natural.—Locke.

Suicides.

Records are said to show that the tendency to suicide is more prevalent among the educated and wealthy than among the poorer and middle classes.

The ELEVEN TOWNS

H. W. SMITH, Editor & Publisher

Entered as second class mail matter at the Postoffice at Goodridge Minn.

Subscription rate $1.00 per year.
Foreign rate $1.50 per year.

The Liberty Loan offers farmers an excellent chance to make a safe investment. They can go to the banks and mortgage their farms and pay 8 per cent interest and buy Liberty Bonds drawing 3½ per cent. It is so safe you know, and it will only cost you 5 per cent to be patriotic.

When the city agriculturlist come to the Farmers Picnics and spout about the necessity of farmers raising more grain and more vegetables, we would advise you farmers to ask them if they are willing to take your wheat at $1.50 a bushel and your potatoes at $1.00 a bushel. We wager that not one in a thousand is willing to take a chance on this years crop at the above prices. And still they ask you to grow two blades where only one grew before. It is not a question with them, Mr. Farmer, how much you get out of it, but what they can get out of you.

The action of the government refusing passports to the delegates to the convention in Stockholm is another proof of the fact that we have ceased to be a democracy, and is now a full-fledged autocracy like Russia before the revolution. The only excuse the government can make us is that this convention might cause some of the nations to sue for peace, or quit the fight. The President has talked long and loud about peace and the desire of the world that it might come, and now it forbids these men to attend a convention, because it might bring about peace. Whither are we drifting.

When reading in our history about the Salem witchcraft, we marvel at the intolerance of that age. We cannot understand how people could think of burning men and women at the stake for crimes that were wholly imaginary, and we pride ourslves on the fact that in our age there is freedom and tolerance. Oh dear \ yes. An assinine patriotic in St. Paul could not bear to see the word "German" in a restuarant sign, but had to smear it over with red paint. Tolerance indeed, in darkest Africa, but not in the United States of America.

In the last issue of our paper we called attention to a story written by Edward Everett Hale entitled "A Man Without a Country". It made us think that after all there are any number of human beings without a country. The poor tramp, the man who drifts from place to place in search of work, the man without a position,—where is his country? One is forced to conclude that such men can not say "my country", but must say "your country". Thousands upon thousands live in cheap tenement houses,, more like animals than human beings, and where is their country? Surely they can not say "my country", but must say "your country". And the thousands who starve because their meagre wage cannot buy enough to eat at present high prices,— have they any reason to shout "my country"? In chorus all these are forced to say "your country, Mr. Morgan, Rockfeller, Carnegie and Company. It is a grand and glorious country for those who have secured a goodly slice, but as for us, it is toiling, suffering, dying.

LIFE OF COURT PAGE HARD

Youths of German Nobility Undergo Severe Training for Their Part in State Functions.

One day as I was sauntering through the park of Castle K——, I noticed Manfrede, a ten-year-old boy, standing bolt upright under a tree, Allda von Krockow writes in the New York Independent. I wondered what he was doing at the time, and on seeing the poor little fellow still there when I returned some time later, I asked the reason.

"Why, he's going through his standing drills," answered his sister Freda. "He began with standing 20 minutes. Now he is so far along he can stand almost an hour and a half. But he's got to reach two hours. He's to be a page, you know."

At Prussian court functions later I sometimes recalled this scene, for the lads that are so picturesque in their theatrically pretty costumes suffer the chance of falling into swoons while standing at their posts behind the chairs of royal princesses; posts at which it is their duty to stand upright and motionless during the long progress of courts, receptions, concerts and the like.

During an evening concert I saw on one occasion four pages faint and fall in succession; their bodies being removed swiftly and unobtrusively by lackeys hovering in the background, while reserve pages stepped into the vacant posts.

USE LITTLE TIN IN SOLDER

Germans, Under Pressure of Necessity, Invent New Method Which Solves Wartime Problem.

German inventive genius, under pressure of Mother Necessity, has been applied successfully to the discovery of a solder with practically no tin, a metal not found in Germany.

Resort was first had to cadmium, a metal of the zinc group, found in large quantities in Germany, and an excellent solder was produced from 80 per cent lead, 10 per cent cadmium and only 10 per cent of the precious tin. This, however, could not be used for making and sealing cans for preserving foodstuffs as lead when brought into contact with fruit or other acids produces poisonous salts. Chemists then remembered bismuth, another metal found in large quantities within the empire, and from cadmium, bismuth and some other German metals a solder was produced which is nonpoisonous and almost free from tin. Since a fourth of the 21,000 tons of tin which Germany imports and consumes annually in peace time is used in making solder, the invention will go far toward solving Germany's wartime tin problem, which recently led the government to decree a general confiscation of the tin tops of beer-mugs and steins.

An Expert In Motives.

Cousin Henry is an expert on motives. If you were reading off a list of names and overlooked Henry, he would understand. He would know exactly the motive that prompted you to do it, says Claude Cullan in the Fort Worth Star-Telegram. If you don't think to introduce him to the man who is with you, he can see through it. He may have to go back four or five years, but he will make a complete case against you. In less than an hour he will know what your motive was. Right now he is angry because his daughter was not selected as valedictorian of her class. You may think that the other girl deserved to be selected, but you don't know all that Henry knows. It is a long story, but he is willing to tell it to you, and after hearing it you will understand the motive—you will understand that it is a case of spite-work.

Further Knowledge Desired.

"Ah, what an entertaining variety there is to the panorama that slides by as we gaze from a street car window," said professor Pate. "The monotony of the buildings is every now and then broken by brief glimpses that arouse our interest. We see a pretty mother and pretty child, a picturesque cottage, a bit of comedy or a moment of tragedy. Sometimes we catch a situation to which we wish we could learn the sequel. For instance, while coming down town the other morning I saw a gentle youth at a window playing a ukulele and in the next room a grim man was stropping a razor."—Kansas City Star.

Smaller Farms in California.

In California the farms originally were the old "Spanish land grants," usually of enormous extent. In a fashion, these great holdings—validated by the American government when California came into the Union—have remained as ranches. Today the people are learning that both for taxation and production, small farms are better, and a movement to bring this about is under way.—Indianapolis News.

Badly Needed.

"It's a pity there are really no good fairies in the world."

"Yes, indeed," answered the motorist. "Think what a pleasure it would be to have a good fairy step out into the road when your car broke down and with one wave of her magic wand send you speeding on your way!"

No Risk.

"I have just been buying some inflated stock."

"And you knew it?"

"Of course, I did. My purchases were toy balloons for the kids."

FOREIGN HOTELS LACK BATHS

Facilities So Common in American Hostelries Still Unknown in Many Cities Abroad.

In many European countries, "the best people," if you know what that means, never bathe in water.

Spanish matrons have expressed much surprise at my complaints about the absence of bathing facilities in the Madrid hotels. One lady, wife of a distinguished member of the cortes, told me she "had herself rubbed down in oil once a week, but never had got into a tub of water and never would!"

Throughout Hungary, outside Budapest, baths are unknown in hotels or in castles of the nobility. Most New Yorkers recall that an heiress of one of New York's wealthiest families—the Vanderbilts—married a Hungarian count, and when she reached the ancestral castle, which her family's American money was expected to restore, sought in vain for any means of taking a bath.

My memory of London hotels goes back to 1875, when there was not a single bath tub in any hotel in that city. A tin pan and bucket of warm water was the only "tub"—and you were lucky to get that.

And in that same period in New York city the Metropolitan and St. Nicholas hotels, supposed to be models of excellence, were totally wanting in bathrooms.

Admittedly, it is as difficult to imagine life without motor cars as without bathtubs; but the former are less than a twenty-year-old necessity, while the bath was an institution long before the times of the Roman emperors.

Alexander very nearly lost his life from pneumonia by bathing in one of the chilly mountain torrents of Asia Minor.—Julius Chambers in the Brooklyn Eagle.

HAM HISTORIC FRENCH TOWN

It Was Here That Louis Napoleon Bonaparte Was Imprisoned Before His Rise to Power.

Strange emotions must have overcome some of the older French soldiers as they hurried through the town of Ham upon the heels of fleeing Germans.

It was in the old fortress at Ham that France's last emperor was a prisoner for many years, observes Girard in the Philadelphia Ledger. After Napoleon's downfall at Waterloo a Bonaparte was as popular with the succeeding French kings as Jim the Penman with bank presidents.

So Louis Napoleon Bonaparte, heir to the Little Corporal's dynasty, was first banished and then shut up at Ham. He escaped from that place after fixing up a dummy in his bed to fool the attendants and putting on the clothes of a carpenter.

He walked through the prison gates with a piece of timber on his shoulder, went to Paris, was elected president, made himself emperor and was snuffed out finally at Sedan.

It was at Ham that Napoleon III found himself another Man of Destiny. And for a couple of decades it seemed as if he were.

Gun That Shoots Oil.

Vice Admiral Guimaraes of the Brazilian navy has invented for pouring oil upon the water in storms a method that is a notable advance upon the methods hitherto in use. The efficacy of a thin film of oil in breaking the force of waves has been well-known ever since Admiral Cloue of the French army announced it to the Academie des Sciences in 1887.

The multitude of torpedo boats, motor boats, trawlers and other small craft with which the entente allies are patroling their coasts and watching for enemy submarines has made it more than ever necessary to improve the methods of spreading the oil.

Admiral Guimaraes has devised a small cannon that can be moved about easily and installed anywhere on a ship. This fires a projectile which is nothing but a glass bottle nine inches long and nearly three inches in diameter, filled with sawdust soaked in animal or vegetable oil—fish oil is the best. This is shot from the cannon by a charge of about an ounce and a half of powder. It can be aimed with great precision to fall just where it will do the most good.

South's Farm Production.

The Manufacturers' Record says that the total value of the South's agricultural products, including animal products, in 1916 was more than $4,650,000,000, or only 8 per cent less than the total for the United States in 1900. The total value of the South's crops, omitting live stock, in 1916 was $3,658,332,000, or $1,072,280,000 over 1915. To this cotton contributed $1,079,508,000, grain $1,253,369,000, and hay, tobacco and potatoes $440,494,000.

Embarrassing Mistake.

"I guess I'll keep away from the music room hereafter," said Mr. Cumrox.

"Don't you care for music?"

"Yes. But not all kinds. I try to be classical to please the family. The other day when we were giving a concert, I broke in ahead of time and rapturously applauded the piano tuner."

Not Interested.

"A smooth-tongued stranger offered to let me be his partner in a proposition that would make me rich in six months."

"Well, did you accept his offer?"

"No. I got rid of him by saying the doctors had given me only six months to live and there was nobody I cared about leaving a fortune to."

TERMS USED IN FEEDING

Scientific Nomenclature Reduced to Every-Day Meanings.

[National Crop Improvement Service.]

Stockfood consists briefly of three chief parts or compounds, omitting the water and minerals. They are:

Protein (containing nitrogen), a muscle former.

Fat (not containing nitrogen), a fuel or fattening substance.

Carbohydrates (meaning made of carbon, hydrogen and oxygen).

These three substances are called organic matter, because they will burn.

Mineral matter is called inorganic. An animal can live on protein alone, but would not under normal conditions, because protein (or albumen) is only found mixed with fat in the case of meat and with fat and carbohydrates in the case of plants and cereals. Familiar examples of protein are white of egg, lean meat and the gluten which can be chewed out of wheat. Fat or oil we all know.

Carbohydrates include sugar, starch, cellulose, fibre, gums, etc.

To keep alive and not lose weight an animal must have small amounts of protein and larger amounts of fat or carbohydrates. They serve as building material to replace worn-out tissue and flesh and also to furnish power (energy) to move, work, and do all the inside work of the body.

The ash or mineral matter furnishes bone material and is also necessary but abundant in nature. A growing animal needs plenty of protein and ash (bone food) and of carbohydrates and fat. A grown-up animal needs less of either the first two, but plenty of the last two. A pregnant animal needs plenty of food for its unborn young.

BUYING FEED INGREDIENTS

Difficult to Buy Proper Feed Stuffs at Random.

[National Crop Improvement Service.]

There are not a dozen feed stores in the country that carry in stock all the ingredients of a first-class mixed feed at all times and at reasonable prices, and usually they do not carry feeds of the same high quality used by the mixers who work scientifically through a laboratory. This is human nature. Competition compels a dealer to sell the cheapest quality. The best quality of feed is seldom carried, because the average buyer will not pay the highest price. A good many experiment stations in a general way will advocate that a farmer mix all his own feed, but they are human like the rest of us and they will use recognized brands in their own feeding operations rather than go to the trouble and take the time to follow their own advice.

There are a good many herds at experiment stations which are kept as sort of a clinic for professors to practice theories upon. The poor brutes are used a good deal as guinea pigs in hospital practice. On the other hand, at the experiment stations are to be found many of the finest animals ever bred.

The mixed feeds of the first grade can be fed alone or in connection with home-grown corn, oats or barley. To do this widens your ration, and it is correct to do so if it will reduce your cost of feeding. Mixed feeds, therefore, are largely a matter of arithmetic.

You can usually get the result for less money than by feeding more expensive grains separately.

THE MANURIAL INGREDIENTS OF FEEDS.

[National Crop Improvement Service.]

Nitrogen is the most important and most valuable fertilizing element supplied by feeds, and it is in this element that they show the greatest variation.

The Connecticut Experiment Station states that it was found that the average mixed fertilizer contained 2.95 per cent nitrogen and showed in a table that eighteen of fifty-two different feeds contained 3.83 per cent. Among this list is cottonseed and linseed meals, gluten seed, middlings, brewers' and distillers' products, and a few of the feed mixtures. It is obvious, therefore, that a wise selection of feeds enhances the value of the manure and consequently plays an important part in farm economy.

BARLEY PRODUCTS.

[National Crop Improvement Service.]

Prof. J. P. Street, in the Annual Report of the Connecticut Agricultural Station for 1912, says: "That malt sprouts should receive more consideration from dairymen, especially in comparison with many of the proprietary mixed feeds containing only from one-third to one-half as much protein as malt sprouts, prices being considered."

He also states that dried brewers' grains, prices considered, in connection with the feed's high analysis, is one of the cheapest high-grade feeds on the market.

WHAT'S IN A MIXED FEED?

[National Crop Improvement Service.]

A high-grade mixed feed suitable for any kind or breed of dairy cow should have high protein content, with an exact digestible analysis. It can be mixed with corn, oats, barley, hay or other forage, which should be grown upon the farm, provided the mixture would save the farmer any money. As a rule, the ingredients of the highest grades are corn, distillers' grains, gluten feed, cottonseed meal hominy meal, malt sprouts, brewers grains, linseed meal, pure wheat bran and salt. The best grades contain no cheap fillers of any kind and so the food is highly concentrated and roughage can be supplied at home.

THE AVERAGE REFORMER.

[National Crop Improvement Service.]

The average reformer having so little at stake himself, plunges about like a bull in a china shop, regardless of the results of his ardor.

An amusing incident is told of the Secretary of Commerce. The can manufacturers put up a howl that unless they could get tin-plate to make up, no canning of fruits and vegetables could be done. so without looking over the field it is said that an order was made that steel was to be diverted by the manufacturers from other projects and put at the disposal of the can manufacturers. It looked all right on the face of it, but when the manufacturers of harvesting machinery demanded steel which they contracted for, and found that there was not steel for aprons, it having been diverted to cans, a hurry-up call modifying the order was issued, so that our harvesting machines could be made in time for the growing crop.

This illustrates how many plans are ignorantly made robbing Peter to pay Paul. Every enthusiast who has a pet reform which is always hitting some other business instead of his own, never looks around to see what the effect will be before he plunges. The manufacturers of feed and the most successful feeders in the country have a right to demand that that delicate machine—the dairy cow—shall not be wrecked by hasty legislation.

Revolutionary reforms are seldom efficacious. Anything which disturbs the food equilibrium should be handled gradually. Experience has shown that the most efficient way to handle cereal products is to remove the human food first and feed the residue to stock. Any other system is sheer extravagance.

WRONG FEEDING METHODS.

[National Crop Improvement Service.]

There is an old story about a ship captain who had a medicine chest. A sailor was sick and he found that No. 47 in his book was the indicated remedy, but alas! the bottle of No. 47 was empty, so he took equal parts of No. 40, which was strychnine, and No. 7, which was carbolic acid, and added them together and made No. 47—and the sailor died.

The application of this old story is that many a feeder will think that if a little of cottonseed or oilseed meal is good, a whole lot will be better. And, like the man who put the green spectacles on the horse and fed him shavings—just after he got him trained the horse died.

It is human nature to experiment in feeds, and the poor cow has to suffer for an overdose or an underdose before the proper ration is established.

DIFFICULT TO MIX FEEDS

A More Scientific Result Can Be Produced By Machinery.

[National Crop Improvement Service.]

As no two lots run alike, it is very difficult to mix straight by-products of oats, barley, rye, corn, cotton-seed, flaxseed, etc., by measure, because it is purely guessing. Only a few years ago intentional fraud or unintentional carelessness was the rule. Before the feed laws were passed, each manufacturer adulterated all the trade would stand.

Every car of feed sold to the consumer is not analyzed, and the farmer cannot become a feed expert because he has no laboratory. Not one car out of five hundred is officially inspected. In the old days country millers were throwing feeds together with no knowledge of feed and were ruining valuable cows and making the farmer poorer. In those days the feed tables were wrong, the feeds didn't fit the tables; the digestible analysis method was incorrect; feed standards for animals were not agreed upon nor complete; the animals didn't fit the standards; the buyer didn't know what was in the feeds he bought to mix; and there was an unavoidable variation in the concentration of the feed.

These conditions have been largely overcome through the joint action of the government and state experiment stations and the mixed feed manufacturers who have every facility for maintaining a uniform product. By using these scientifically prepared feeds, many a herd has doubled its yield and profits. There are some painters who can buy lead, oil and dryer and mix and match their own color uniformly but the best painters of today have learned that mill-made brands are much better than anything they can mix with a paddle. The same is true in fertilizers to a great extent. In mixed feeds there can be no economy in home mixing because the mixing factories, being near the large markets, can utilize by-products to the very best advantage. Home mixing cannot be accomplished at one-tenth of a cent per lb., besides the result is never twice alike and cannot be without the help of a laboratory.

[National Crop Improvement Service.]

A practical test shows that eight tons of a first class dairy feed will replace 13 1-3 tons of farm grain, making a proportionate saving of about $20 per ton and it also puts three times as much fertilizer back on the farm as is in the grain this farmer could sell.

[National Crop Improvement Service.]

There is no sense in hauling two loads of cheap feed when one load of high-grade feed will do the work and costs but three-fourths as much as the two loads.

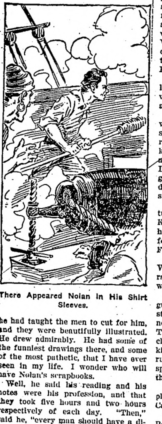
The Man Without A Country

by Edward Everett Hale

All that was near fifty years ago. If Nolan was thirty then, he must have been near eighty when he died. He looked sixty when he was forty. But he never seemed to me to change a hair afterward. As I imagine his life, from what I have seen and heard of it, he must have been in every sea, and yet almost never on land. He must have known in a formal way, more officers in our service than any man living knows. He told me once, with a grave smile, that no man in the world lived so methodical a life as he. "You know the boys say I am the Iron Mask, and you know how busy he was." He said it did not do for anyone to try to read all the time, more than to do anything else all the time; but that he read just five hours a day. "Then," he said, "I keep up my notebooks, writing in them at such and such hours from what I have been reading; and I include in them my scrapbooks." These were very curious indeed. He had six or eight, of different subjects. There was one of history, one of natural science, one which he called "Odds and Ends." But they were not merely books of extracts from newspapers. They had bits of plants and ribbons, shells tied on, and carved scraps of bone and wood, which he had taught the men to cut for him, and they were beautifully illustrated. He drew admirably. He had some of the funniest drawings there, and some of the most pathetic, that I have ever seen in my life. I wonder who will have Nolan's scrapbooks.



There Appeared Nolan in His Shirt Sleeves.

Well, he said his reading and his notes were his profession, and that they took five hours and two hours respectively of each day. "Then," said he, "every man should have a diversion as well as a profession. My natural history is my diversion." That took two hours a day more. The men used to bring him birds and fish, but on a long cruise he had to satisfy himself with centipedes and cockroaches and such small game. He was the only naturalist I ever met who knew anything about the habits of the house fly and the mosquito. All those people can tell you whether they are Lepioptera or Steptopotera; but as for elling how you can get rid of them, r how they get away from you when ou strike them, why, Linnaeus knew 's little of that as John Foy, the idiot, id. These nine hours made Nolan's egular daily "occupation." The rest f the time he talked or walked. Till e grew very old, he went aloft a great eal. He always kept up his exercise d I never heard that he was ill. If y other man was ill, he was the kindt nurse in the world; and he knew ore than half the surgeons do. Then anybody was sick or died, or if the ptain wanted him to on any other casion, he was always ready to read ayers. I have remarked that he ad beautifully.

My own acquaintance with Philip olan began six or eight years after e war, on my first voyage after I as appointed a midshipman. It was the first days after our slave trade eaty, while the reigning house, ich was still the house of Virginia, d still a sort of sentimentalism out the suppression of the horrors the middle passage, and something s sometimes done that way. We re in the South Atlantic on that siness. From the time I joined, I lieve I thought Nolan was a sort of chaplain—a chaplain with a blue at. I never asked about him. Evthing in the ship was strange to . I knew it was green to ask quesns, and I suppose I thought there s a "Plain-Buttons" on every ship. had him to dine in our mess once eek, and the caution was given that that day nothing was to be said ut home. But if they had told us to say anything about the planet rs or the book of Deuteronomy, I uld not have asked why; there were a great many things which seemed to me to have as little reason. I first came to understand anything about "the man without a country" one day when we overhauled a dirty little schooner which had slaves on board. An officer was sent to take charge of her, and after a few minutes he sent back his boat to ask that someone might be sent him who could speak Portuguese. We were all looking over the rail when the message came, and we all wished we could interpret, when the captain asked who spoke Portuguese. But none of the officers did; and just as the captain was sending forward to ask if any of the people could, Nolan stepped out and said he should be glad to interpret, if the captain wished, as he understood the language. The captain thanked him, fitted out another boat with him, and in this boat it was my luck to go.

When we got there, it was such a scene as you seldom see, and never want to. Nastiness beyond account, and chaos run loose in the midst of the nastiness. There were not a great many of the negroes; but by way of making what there were understand that they were free, Vaughan had had their handcuffs and anklecuffs knocked off, and, for convenience' sake, was putting them upon the rascals of the schooner's crew. The negroes were, most of them, out of the hold, and swarming all round the dirty deck, with a central throng surrounding Vaughan and addressing him in every dialect and patois of a dialect, from the Zulu click up to the Parisian of Beledeljereed.

As we came on deck, Vaughan looked down from a hogshead, on which he had mounted in desperation, and said:

"For God's love, is there anybody who can make these wretches understand something? The men gave them rum, and that did not quiet them. I knocked that big fellow down twice, and that did not soothe him. And then I talked Choctaw to all of them together; and I'll be hanged if they understood that as well as they understood the English."

Nolan said he could speak Portuguese, and one or two fine-looking Kroomen were dragged out, who, as it had been found already, had worked for the Portuguese on the coast at Fernando Po.

"Tell them they are free," said Vaughan; "and tell them that these rascals are to be hanged as soon as we can get rope enough."

Nolan explained it in such Portuguese as the Kroomen could understand, and they in turn to such of the negroes as could understand them. Then there was such a yell of delight, clinching of fists, leaping and dancing, kissing of Nolan's feet, and a general rush made to the hogshead by way of spontaneous worship of Vaughan as the deus ex machina of the occasion.

"Tell them," said Vaughan, well pleased, "that I will take them all to Cape Palmas."

This did not answer so well. Cape Palmas was practically as far from the homes of most of them as New Orleans or Rio Janeiro was; that is, they would be eternally separated from home there. And their interpreters, as we could understand, instantly said, "Ah, non Palmas," and began to propose infinite other expedients in most voluble language. Vaughan was rather disappointed at this result of his liberality, and asked Nolan eagerly what they said. The drops stood on poor Nolan's white forehead as he hushed the men down, and said:

"He says, 'Not Palmas.' He says, 'Take us home, take us to our country, take us to our own house, take us to our own pickaninnies and our own women.' He says he has an old father and mother, who will die, if they do not see him. And this one says he left his people all sick, and paddled down to come and help them, and that these devils caught him in the bay just in sight of home, and that he has never seen anybody from home since then. And this one says," choked out Nolan, "that he has not heard a word from his home in six months, while he has been locked up in an infernal barracoon."

Vaughan always said he grew gray himself while Nolan struggled through this interpretation. I, who did not understand anything of the passion involved in it, saw that the very elements were melting with fervent heat, and that something was to pay somewhere. Even the negroes themselves stopped howling as they saw Nolan's agony, and Vaughan's almost equal agony of sympathy. As quick as he could get words, he said:

"Tell them yes, yes; tell them they shall go to the Mountains of the Moon, if they will. If I sail the schooner through the Great White Desert, they shall go home!"

And after some fashion Nolan said so. And then they all fell to kissing him again and wanted to rub his nose with theirs.

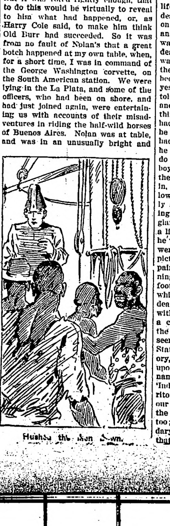
But he could not stand it long; and getting Vaughan to say he might go back, he beckoned me down into our boat. As we lay back in the stern sheets and the men gave way, he said to me: "Youngster, let that show you what it is to be without a family, without a home, and without a country. And if you are ever tempted to say a word or to do a thing that shall put a bar between you and your family, your home, and your country, pray God in his mercy to take you that instant home to his own heaven. Stick by your family, boy; forget you have a self, while you do everything for them. Think of your home, boy; write and send, and talk about it. Let it be nearer and nearer to your thought, the farther you have to travel from it; and rush to it, when you are free, as that poor black slave is doing now. And for your country, boy," and the words rattled in his throat, "and for that flag," and he pointed to the ship, "never dream a dream but of serving her as she bids you, though the service carry you through a thousand hells. No matter what happens to you, no matter who flatters you or who abuses you, never look at another flag, never let a night pass but you pray God to bless that flag. Remember, boy, that behind all these men you have to do with, behind officers, and government, and people even, there is the country herself, your country, and that you belong to her as you belong to your own mother. Stand by her, boy, as you would stand by your mother, if those devils there had got hold of her today!"

I was frightened to death by his calm, hard passion; but I blundered out that I would, by all that was holy, and that I had never thought of doing anything else. He hardly seemed to hear me; but he did, almost in a whisper, say: "Oh, if anybody had said so to me when I was of your age!"

I think it was this half-confidence of his, which I never abused, for I never told this story till now, which afterward made us great friends. He was very kind to me. Often he sat up, or even got up, at night to walk the deck with me when it was my watch. He explained to me a great deal of my mathematics. He lent me books, and helped me about my reading. He never alluded so directly to his story again; but from one and another officer I have learned, in thirty years, what I am telling. When we parted from him in St. Thomas harbor, at the end of our cruise, I was more sorry than I can tell. I was very glad to meet him again in 1830; and later in life, when I thought I had some influence in Washington, I moved heaven and earth to have him discharged. But it was like getting a ghost out of prison. They pretended there was no such man, and never was such a man. They will say so at the department now! Perhaps they do not know. It will not be the first thing in the service of which the department appears to know nothing!

There is a story that Nolan met Burr once on one of our vessels, when a party of Americans came on board in the Mediterranean. But this I believe to be a lie; or rather, it is a myth, ben trovato, involving a tremendous blowing-up with which he sank Burr, asking him how he liked to be "without a country." But it is clear, from Burr's life, that nothing of the sort could have happened; and I mention this only as an illustration of the stories which get a-going where there is the least mystery at bottom.

So Philip Nolan had his wish fulfilled. Poor fellow, he repented of his folly, and then, like a man, submitted to the fate he had asked for. He never intentionally added to the difficulty or delicacy of the charge of those who had him in hold. Accidents would happen; but they never happened from his fault. Lieutenant Truxton told me that when Texas was annexed, there was a careful discussion among the officers, whether they should get hold of Nolan's handsome set of maps, and cut Texas out of it, from the map of the world and the map of Mexico. The United States had been cut out when the atlas was bought for him. But it was voted rightly enough, that to do this would be virtually to reveal to him what had happened, or, as Harry Cole said, to make him think Old Burr had succeeded. So it was from no fault of Nolan's that a great botch happened at my own table, when, for a short time, I was in command of the George Washington corvette, on the South American station. We were lying in the La Plata, and some of the officers, who had been on shore, and had just joined again, were entertaining us with accounts of their misadventures in riding the half-wild horses of Buenos Aires. Nolan was at table, and was in an unusually bright and talkative mood. Some story of a tumble reminded him of an adventure of his own, when he was catching wild horses in Texas with his brother Stephen, at a time when he must have been quite a boy. He told the story with a good deal of spirit—so much so, that the silence which often follows a good story hung over the table for an instant, to be broken by Nolan himself. For he asked, perfectly unconsciously,



Hushed the Men Down.

"Pray, what has become of Texas? After the Mexicans got their independence, I thought that province of Texas would come forward very fast. It is really one of the finest regions on earth; it is the Italy of this continent. But I have not seen or heard a word of Texas for near twenty years."

There were two Texan officers at the table. The reason he had never heard of Texas was that Texas and her affairs had been painfully out of his newspapers since Austin began his settlements; so that, while he read of Honduras and Tamaulipas, and, till quite lately, of California, this virgin province, in which his brother had traveled so far and, I believe, had died, had ceased to be with him. Walters and Williams, the two Texas men, looked grimly at each other, and tried not to laugh. Edward Morris had his attention attracted by the third link in the chain of the captain's chandelier. Watrous was seized with a convulsion of sneezing. Nolan himself saw that something was to pay, he did not know what. And I, as master of the feast, had to say:

"Texas is out of the map, Mr. Nolan. Have you seen Captain Back's curious account of Sir Thomas Roe's Welcome?"

After that cruise I never saw Nolan again. I wrote to him at least twice a year, for in that voyage we became even confidentially intimate; but he never wrote to me. The other men tell me that in those fifteen years he aged very fast, as well he might indeed, but that he was still the same gentle, uncomplaining, silent sufferer that he ever was, bearing as best he could his self-appointed punishment, rather less social, perhaps, with new men whom he did not know, but more anxious, apparently, than ever to serve and befriend and teach the boys, some of whom fairly seemed to worship him. And now it seems the dear old fellow is dead. He has found a home at last, and a country.

Since writing this, and while considering whether or no I would print it, as a warning to the young of today of what it is to throw away a country, I have received from Danforth, who is on board the Levant, a letter which gives an account of Nolan's last hours. It removes all my doubts about telling this story.

To understand the first words of the letter, the nonprofessional reader should remember that after 1817 the position of every officer who had Nolan in charge was one of the greatest delicacy. The government had failed to renew the order of 1807 regarding him. What was a man to do? Should he let him go? What, then, if he were called to account by the department for violating the order of 1807? Should he keep him? What, then, if Nolan should be liberated some day, and should bring an action for false imprisonment or kidnaping against every man who had had him in charge? I urged and pressed this upon Southard, and I have reason to think that other officers did the same thing. But the secretary always said, as they so often do at Washington, that there were no special orders to give, and that we must act on our own judgment. That means, "If you succeed, you will be sustained; if you fail, you will be disavowed." Well, as Danforth says, all that is over now, though I do not know but I expose myself to a criminal prosecution on the evidence of the very revelation I am making.

Here is the letter:

"Levant, 2° 2" S. @ 131° W.

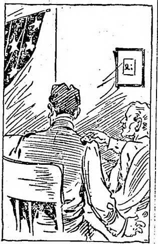
"Dear Fred—I try to find heart and life to tell you that it is all over with dear old Nolan. I have been with him on this voyage more than I ever was, and I can understand wholly now the way in which you used to speak of the dear old fellow. I could see that he was not strong, but I had no idea that the end was so near. The doctor had been watching him very carefully, and yesterday morning came to me and told me that Nolan was not so well, and had not left his stateroom—a thing I never remember before. He had let the doctor come and see him as he lay there, the first time the doctor had been in the stateroom, and he said he should like to see me. Oh, dear! do you remember the mysteries we boys used to invent about his room, in the old Intrepid days? Well, I went in, and there, to be sure, the poor fellow lay in his berth, smiling pleasantly as he gave me his hand, but looking very frail. I could not help a glance round, which showed me what a little shrine he had made of the box he was lying in. The stars and stripes were triced up above and around a picture of Washington, and he had painted a majestic eagle, with lightnings blazing from his beak and his foot just clasping the whole globe, which his wings overshadowed. The dear old boy saw my glance, and said, with a sad smile, 'Here, you see, I have a country!' And then he pointed to the foot of his bed, where I had not seen before a great map of the United States, as he had drawn it from memory, and which he had there to look upon as he lay. Quaint, queer old names were on it, in large letters: 'Indiana Territory,' 'Mississippi Territory,' and 'Louisiana,' as I supposed our fathers learned such things; but the old fellow had patched in Texas, too; he had carried his western boundary all the way to the Pacific, but on that shore he had defined nothi

"'Oh, Danforth,' he said, 'I know I am dying. I cannot get home. Surely you will tell me something now? Stop! stop! Do not speak till I say what I am sure you know, that there is not in this ship, that there is not in America—God bless her!—a more loyal man than I. There cannot be a man who loves the old flag as I do, or prays for it as I do, or hopes for it as I do. There are thirty-four stars in it now, Danforth. I thank God for that, though I do not know what their names are. There has never been one taken away; I thank God for that. I know by that that there has never been any successful Burr. Oh, Danforth, Danforth,' he sighed out, 'how like a wretched night's dream a boy's idea of personal fame or of separate sovereignty seems, when one looks back on it after such a life as mine! But tell me—tell me something—tell me everything, Danforth, before I die!'

"Ingham, I swear to you that I felt like a monster that I had not told him everything before. Danger or no danger, delicacy or no delicacy, who was I that I should have been acting the tyrant all this time over this dear, sainted old man, who had years ago expiated in his whole manhood's life the madness of a boy's treason? 'Mr. Nolan,' said I, 'I will tell you everything you ask about. Only, where shall I begin?'

"Oh, the blessed smile that crept over his white face! and he pressed my hand and said, 'God bless you! Tell me their names,' he said, and he pointed to the stars on the flag. 'The last I know is Ohio. My father lived in Kentucky. But I have guessed Michigan and Indiana and Mississippi—that was where Fort Adams is—they make twenty. But where are your other fourteen? You have not cut up any of the old ones, I hope?'

"Well, that was not a bad text, and I told him the names, in as good order as I could, and he bade me take down his beautiful map and draw them in as I best could with my pencil. He was wild with delight about Texas, told me how his brother died there; he had marked a gold cross where he supposed his brother's grave was; and he had guessed at Texas. Then he was delighted as he saw California and Oregon—that, he said, he had suspected partly, because he had never been permitted to land on that shore, though the ships were there so much. 'And the men,' said he, laughing, 'brought off a good deal besides furs.' Then he went back—heavens, how far—to ask about the Chesapeake, and what was done to Barron for surrendering her to the Leopard, and whether Burr ever tried again, and he ground his teeth with the only passion he showed. But in a moment that was over, and he said, 'God forgive me, for I am sure I forgive him.' Then he asked about the old war—told me the true story of his serving the gun the day we took the Java—asked about dear old David Porter, as he called him. Then he settled down more quietly, and very happily, to hear me tell in an hour the history of fifty years.



"Tell Me Their Names," He Said.

"How I wished it had been somebody who knew something! But I did as well as I could. I told him of the English war. I told him about Fulton and the steamboat beginning. I told him about old Scott and Jackson; told him all I could think about the Mississippi, and New Orleans, and Texas, and his own old Kentucky. And do you know he asked who was in command of the 'Legion of the West'? I told him it was a very gallant officer named Grant, and that by our last news, he was about to establish his headquarters at Vicksburg. Then, 'Where was Vicksburg?' I worked that out on the map; it was about a hundred miles, more or less, above his old Fort Adams; and I thought Fort Adams must be a ruin now. 'It must be at old Vick's plantation,' said he; 'well, that is a change!'

"I tell you, Ingham, it was a hard thing to condense the history of half a century into that talk with a sick man. And I do not know what I told him—of emigration, and the means of it—of steamboats and railroads and telegraphs—of inventions and books and literature—of the colleges and West Point and the Naval school—but with the queerest interruptions that ever you heard. You see it was Robinson Crusoe asking all the accumulated questions of fifty-six years.

"I remember he asked, all of a sudden, who was president now; and when I told him, he asked if Old Abe was Gen. Benjamin Lincoln's son. He said he met old General Lincoln, when he was quite [illegible] at [illegible] Indian treaty. I said no; that Old Abe was a Kentuckian like himself, but I could not tell him of what family; he had worked up from the ranks. 'Good for him!' cried Nolan; 'I am glad of that. As I have brooded and wondered, I have thought our danger was in keeping up those regular successions in the first families.' Then I got talking about my visit to Washington. I told him of meeting the Oregon congressman, Harding; I told him about Smithsonian and the exploring expedition; I told him about the capitol—and the statues for the pediment—and Crawford's 'Liberty'—and Greenough's Washington: Ingham, I told him everything I could think of that would show the grandeur of his country and its prosperity.

"And he drank it in, and enjoyed it as I cannot tell you. He grew more and more silent, yet I never thought he was tired or faint. I gave him a glass of water, but he just wet his lips, and told me not to go away. Then he asked me to bring the Presbyterian 'Book of Public Prayer,' which lay there, and said, with a smile, that it would open at the right place—and so it did. There was his double red mark down the page; I knelt down and read, and he repeated with me, 'For ourselves and our country, O gracious God, we thank thee, that, notwithstanding our manifold transgressions of thy holy laws, thou hast continued to us thy marvelous kindness'—and so to the end of that thanksgiving. Then he turned to the end of the same book, and I read the words more familiar to me: 'Most heartily we beseech thee with thy favor to behold and bless thy servant, the president of the United States, and all others in authority'—and the rest of the Episcopal collect. 'Danforth,' said he, 'I have repeated those prayers night and morning, it is now fifty-five years.' And then he said he would go to sleep. He bent me down over him and kissed me; and he said, 'Look in my Bible, Danforth, when I am gone.' And I went away.

"But I had no thought it was the end. I thought he was tired and would sleep. I knew he was happy, and I wanted him to be alone.

"But in an hour, when the doctor went in gently, he found Nolan had breathed his life away with a smile. He had something pressed close to his lips. It was his father's badge of the Order of Cincinnati.

"We looked in his Bible, and there was a slip of paper, at the place where he had marked the text—

"'They desire a country, even a heavenly: wherefore God is not ashamed to be called their God: for he hath prepared for them a city.'

"On this slip of paper he had written:

"'Bury me in the sea; it has been my home, and I love it. But will not someone set up a stone for my memory at Fort Adams or at Orleans, that my disgrace may not be more than I ought to bear? Say on it:

In Memory of
PHILIP NOLAN
Lieutenant
In the Army of
the United States.

"'He loved his country as no other man has loved her; but no man deserved less at her hands.'"

(THE END.)

Story Everyone Should Read.

Dr. Edward Everett Hale is best known to the present generation as a writer of fiction that has taken a high and deserved place in American literature. His immortal short story, "The Man Without a Country," was published anonymously in the Atlantic Monthly in 1863 and collected with other stories in a volume issued five years afterward.

Great as were Doctor Hale's contributions to the literature of his country, there is nothing in all his works which will live longer than his portrayal of Philip Nolan's unfortunate career. Since its first publication, now many years more than half a century ago, it has been considered a masterpiece of literature as well as an unequaled inspiration to patriotism. Especially to the young and impetuous does the story make a thrilling appeal and at the same time teaches a stern lesson. No American can read it without a keener sense of the duty which he owes to his country.

PIGEON IS NOT DESTRUCTIVE

Beaks Are Not Made to Dig With and Feet Are Not Fit for Scratching—Pick Up Weeds.

Pigeons are not destructive to gardens, as is commonly believed. Their beaks are not like that of the crow, to enable them to dig with, nor have they feet like chickens to scratch with.

Pigeons simply walk over the surface of the ground and pick up what is in plain sight, which consists principally of weed seeds.

ORCHARDS CLOSE TO HOUSES

Receive Better Care and Attention From Owner Than Those at Some Distance Away.

Orchards close to the house receive better care and attention, for their needs are before the owner all of the time.

They are protected from prowlers, which is an important consideration of those living close to towns or cities.

Will sell or exchange for property in Thief River Falls the following land, Lot 4 in Section 30 and Lots 1, 2, 3 and NE¼ SW¼ in Sections 31-155-39.

H. O. Kjomme, Thief River Falls, Minnesota.

Last Thursday evening a number of the ladies got together and suprised Mrs. L. J. Foss who was leaving for Glendive, Mont. As a token of the high esteem in which Mrs. Foss was held, she was presented with a handsome present.

Albert Boman, who was employed in this office some time ago, passed thru here Friday enroute th his home near Grygla from Minneapolis: Al has enlisted in the U. S. Navy and will spend a few weeks home before reporting for duty.

The Foss family left Friday evening for Thief River Falls where they visited for a few days with relatives and friends before leaving fos Glendive, Mont., where they will make their future home. They were one of the first families to locate here when the town started and up till a few months ago operated the Goodridge Hotel The family has numerous friends here who were sorry to see them leave but wish them all kinds of success in their new field of labor.

Scrap Iron Wanted.

Until June 25th I will pay $5.5 per ton as I have a contract with the Thief River Hide & Fur Co., which expires about that time.

C. H. Rossmon

Stallion.

Will make the following stands with my fullblood Percheron stallion maxmus 42170.

C. Elg, Erie, Monday
Edwin Hanson, Tuesday afternoon and Wednesday forenoon.
Ole A. Olsen, Reiner, Thursday
Reson and Yoon Livery barn, Saturday

Why not breed to a good horse and get a colt worth at least $25 to $50.0 more than a colt from a grade or scru horse when of selling age.

S. Lysbakken.

Fourteen Register Here.

Fourteen is the number of young men between the age of 21 and 31 who have their homes in the village of Goodridge. Twelve registered here at the registration held Tuesday and two registered by mail. In the township there were only three that came within the age limit.

Goodridge Turns out

To sell Liberty Bonds.

Nearly every male resident in the village of Goodridge turned out Friday to sell Liberty Bonds. Eleven automobiles with two men in each left here in the morning and a house to house canvas was made in the township of Goodridge, High Landing, Star and Reiner. A few bonds were sold but not so many as might have been sold under ordinary circumstances Most of the farmers would like to have bought but owing to a crop failure last year and most of them having to buy feed for their stock during the winter were unable to do so being a little short of surplus cash at the present time.

Obituary.

Mrs. Anna M. Udstrand of Reiner, after five long weeks of illness, died Tuesday June 5th at 11:50 A. M. at the age of 51 years 10 months 11 days. She was born in Norway July 26th, 1865, and was married to John Erickson Udstrand May 27th, 1887. She came to America in July 1890 with family and parents and resided at Grand Forks for a year, later moving to Minnesota at her late heme. She is survived by her husband, 3 daughters and 5 sons, who are Mogna 29, Amanda 26, Selmer 24, Harry 18, John 16, Myrtle 13, Ralph 10 and Lambert 7.

The family extends their heartfelt thanks to all relatives and friends who so kindly helped them in their deep sorrow.

The funeral was held today at 10:30 a. m., Rev. Hoyum conducting the services.

Gates Starts His

Holstein Farm.

On Saturday of last week W. R. Gates of Fort Atkinson, Wisconsin, arrived at Goodridge with a carload of fourteen Holstein cows and one registered Holstein Bull. Late last fall Mr. Gates purchased from Magnus and Severt Lysbakken 240 acres of fine land in Highlanding township, eight miles southeast of Goodridge. Early this spring Mr. Jensen came up from St. Paul to take charge of the farm and has been busy ever since getting the seed into the ground. Mr. Jensen is a model farmer, being a graduate from the Agricultural College of Denmark which is noted for its high standing, and the farmers of this neighborhood will be able to secure some valuable information from him, especially regarding dairying and cattle raising. It is the plan of Mr. Gates to raise high grade and registered cattle for sale among the neighbors. He is an experienced breeder of Holstein cattle in Wisconsin where he has large numbers among the farmers around Fort Atkinson. Down there he has placed the cattle with the farmers on shares, but here he will raise them on his farm and sell direct.

Bids Wanted.

The Village Council of the Village of Goodridge will receive bids on Monday June 18th at 8 p. m., from tractor owners, for grading six blocks of road within the village.

The Council reserves the right to reject any or all bids.

Carl Christianson,
Village Recorder.

NOTICE.

Farmers are hereby requested to cut the weeds and brush and haul the stones away from the road and ditch side adjoining their land, within the town of Reiner, by Oct. 1st., 1917, otherwise the town will do the wor and charge it against the land.

By order of Town Board
T. Morken, Clerk.

Notice To The Public'

All owners of live stock are hereby notified to keep their stock from running at-large within the streets within the Village. Stock found at large on the streets will be taken up and the owner shall pay the penalty provided in the case.

By order, Village Council

Aviator Has Joined Army.

Louis Certson, known as "The Human Night Hawk," who is to be featured at the Pennington County Fair, to be held here August 1-2-3, his joined the army aviation corps with a rank of lieutenant. The government has, however, given him the right to fill all his engagements, and in the meantime he is securing recruits. He will make his flights in Thief River Falls in a new French scout machine, the first to be seen by an American public. At present he is stationed at Ashburn, Ill., where the government is erecting an aviation field.

3 Short Courses

For Rural Teachers

Three special short courses will be given in connection with the teachers' training school at University Farm, June 18 to July 27. Thess are for principals of consolidated schools, for teachers of home training in Class B consolidated schools, and for teachers of rural demonstration schools.

The short course for consolidated school principals includes a study of consolidated school problems, school administration, elementary school supervision, and playground supervision. The course for teacher on home training requires a full program for the student during two summer sessions. The course for teachers of rural demonstration schools includes a special course by the superuisor of training departments, a course in nature study, and elective work in primary methods, in handwork and in other subjects.

HIGHLANDING NEWS

Miss Arvella Heggestuen visited with Miss Hannah Halvorson last Thursday.

Alice Thorson is assisting Mrs. K. Klemmetson with her housework.

Halvorson and Guirud of Goodridge were selling Liberty Bonds for "Uncle Sam" in this vicinity last Friday.

The barn dance in the Edon Davis barn was attended by a large crowd and a very enjoyable time was had by all present.

Arvella Heggestuen made a short call at the Olson home last Sunday.

Mr. Ole Nelson and children are staying with Mrs. Narveson while Mr. Nelson is finishing his spring work on her farm which he has rented.

Dairy Cow Exchange

At University Farm.

The dairy husbandry division of the Minnesota College of Agricultural is starting a dairy-cow exchange, announces H. H. Kildee, head of the division. It is calling upon farmers who have more dairy cows and heifers than they need or can feed to list such animals with the division so that sale lists may be made up and sent out to prospective buyers.

The aim is to prevent the needless slaughter of grade dairy cows and heifers capable of returning a large income from milk and butter fat. The demand for dairy products is rapidly increasing and promises to increase still more rapidly in the next two or three year regardless of the length of the war. The slaughter of dairy cows at this time, therefore, is something like killing the goose that laid the golden egg.

Before deciding to sell to the butcher the farmer should communicate with the dairy husbandry division, University Farm, St. Paul, in order that his surplus stock may be placed where it will be of the greatest service to the people.

Community Picnic.

Next week Thursday, June 14th, has been selected as the day for holding the Community Picnic of all the farmers of Pennington County, together with residents of the city of Thief River Falls. That day is Flag Day and will be generally observed thruout the state. No better day could be chosen for a gathering of this nature. The Ed. Aubol Grove two miles north of St. Hilaire is sufficiently large to hold all who can come from the entire county, as well as these from outside of the county.

The principal speaker of the day will be W. A. McKerrow of the University Farm, St. Paul who is well versed in dairying. F. B. Hills of the American Guernsey Cattle Club has also promised to come with Mr. McKerrow. Judge F. T. Wilson, of Stillwater, an eminent authority on community life has also promised to be with us on this occasion. Every one in the county is invited to come and bring their lunch and enjoy the festivites of the day.

PROCESS OF MAKING HATS

Elaborate Machinery and Much Human Labor Necessary for the Manufacture of Headgear.

The manufacture of hats is one of the most interesting of manufacturing processes and few wearers of this important part of the male wardrobe would recognize in the great bales of rabbit, hare, muskrat, otter and other skins that come to the Danbury fur factories the material from which their (fur) felt hats are made. The best skins and by far the largest portion are imported and arrive in great bales containing from 2,000 to 4,000 skins. Many processes are gone through in the fur factory before the fur is ready for the hat manufacturer, who, after putting it through blowers, which clean the fur from foreign substances and hair, start the actual making of a hat by weighing out just enough fur to make a given size and weight of soft or stiff headgear. The fur is fed into an inclosed machine in which is a revolving copper cone, perforated and wet, beneath which is a rapidly revolving suction fan which creates a downward air current. The result is that the light weight fur is swirled about until it appears like a miniature snow storm and gradually and evenly settles on the cone. When all the fur for one hat is thus fed into the former and is deposited on the cone, the machine is opened, the operator wraps a cloth about the cone with its evenly deposited covering of fur, removes the cone and slips off the first form of the hat It appears to be a conical, wet and delicate object; but is quickly immersed in warm water, which increases the holding quality of the fur so that the "bodies" can be safely handled through the successive processes of shrinking to exact sizes, dyeing for desired colors and drying, all of which is necessary before the rough bodies begin their travels through the hands of various skilled workmen who shape and block and trim, with the aid of almost human mechanical aids, the bodies into finished hats.

WHAT CANON CARNEGIE HEARD

Good Story Concerning the New Chaplain of the House of Commons.

A good story is told concerning Canon Carnegie, the new chaplain of the house of commons.

It relates to the time when he was working as a curate in the East end of London.

He was preaching to a congregation largely composed so far as the men were concerned of waterside laborers and his subject was fasting.

"Of course," he said, "many of you men earning your living as you do by hard work, cannot be expected to deny yourself food. But you can fast in another way, and I do urge you to do this—spare yourself the use of strong language."

After the sermon Mr. Carnegie was passing out of the church when he overheard one of his late congregation remark: "That was a —— good sermon the —— parson preached, Bill."

"—— good," was Bill's too emphatic rejoinder.

Quantity, Not Quality.

Engineer—I want a large size dictionary.

Librarian—We have none in now except the small ones.

Engineer—Naw, this is important; there's a leg missing on my dresser.

Best Wishes.

When Billie's mother was going to attend his aunt's wedding he was sick and could not go, but said: "Tell Aunt Margaret I hope she has a happy wedding and many of them."

Would Be Liberal.

"Several men have been with the company for more than thirty years. What shall we do to show our appreciation?" "Um. Let's see. Suppose we give each man a gold star on his collar." "Shall we require the men to pay for the same?" "No, that would hardly be fair. The company will pay half."
—Louisville Courier-Journal.

Nut Eating.

In general, nuts are as easily digested as other foods, if they are thoroughly masticated, and if eaten in moderate quantities. The fat of nuts thus eaten is in an emulsified state and cannot interfere with the digestion of other foods. The addition of salt does not assist their digestion in any appreciable degree.

Nothing to Be Gained.

A Roman stoic philosopher was discoursing one day on life and death. "They are just the same," he said; "there is no difference between them." "Why don't you die, then, if there is no difference?" one of his disciples asked. "Because there is no difference," returned the philosopher.

NATIONAL DISH OF MEXICO

It Is Called "Mole de Guajolota" and a Great Variety of Ingredients Enter Into It.

Americans in some mysterious way have gained the impression that the national food of Mexico is chile con carne, a hot composition of peppers and meat. Americans also hear much about frijoles and tortillas, the first being a preparation of beans boiled and then fried, and the second being a preparation of cornmeal cakes. Ask a Mexican what the national dish of his country is and he will no doubt answer "mole de guadjolota."

Though Mexican cooks show individuality in the preparation of mole de guajolota, it is usually a combination of raisins, almonds, peanuts, cinnamon, chocolate, "ajonjolin," cominos, anise, four or five different varieties of chiles, garlic, tomatoes and perhaps some other ingredients. These ingredients are thoroughly ground and mixed and put to stew in an enormous earthen bowl, with perhaps barely sufficient lard and water to leaven the mass properly, while it is left to stew for perhaps two or three hours. While it is stewing one or two turkeys are cut up into small pieces and dropped into the bowl to be thoroughly cooked in this rich gravy.

It is said that the turkey cooked in this gravy gives to the "mole" a rich turkey taste, while the "mole" itself gives the turkey a savor unsurpassed. In popular speech the long name of this dish is contracted to "mole" and which is pronounced "mo-lay."

USE OF BARBED-WIRE IN WAR

Erection of Trench Entanglements One of the Most Dangerous Features of the Soldier's Work.

The erection of war entanglements, even when the trenches are some distance apart, is at all times dangerous. The men slip over the parapet and, in the first place, pound in the supports with mallets, the heads of which are carefully wrapped in cloth in order to deaden the sound. Two men carry the wire drum—a wooden cylinder round which the wire is rolled —by means of a long pole through the center, and a comrade attaches the wires to the supports. The work is slow and nerve-straining, says a writer in the London Graphic, for star shells burst often, and compel the men to crouch low and remain motionless until the flare burns out.

To each soldier who takes part in modern warfare thick gloves for gripping wire and strong pliers for cutting it are as essential as the rifle and bayonet. Before an assault by his own regiment, the soldier cuts his own wire, and he must then endeavor as best he may to cut and hack his way through the enemy's, pulling down a support here, cutting the wires while the machine-gun batteries rap out their message of death toward him. Thus barbed-wire, so simple in itself, so deadly when used in the ways described, enters into every phase of operation in the firing zone.

Development of Airplane.

It is said that the French government is planning to convert its corps of army aviators, thousands upon thousands of them, into mail carriers after the war. There are no technical difficulties in the way. Airplane engines have been perfected to the highest degree of reliability, their speed has been developed marvelously. Nothing short of thick fog, a violent thunderstorm or a hurricane bordering almost on a cyclone now serves to prevent flying—with rarely a casualty from natural causes. Indeed, the greatest defect in the army aerial service, according to officials in that branch, is overconfidence in what the airplane engine can do. Flights of six and eight and ten hours without replenishing the gasoline supply are now of common occurrence. Mountains can be scaled as if they were mounds under the foot of a Brobdignagian.

Oyster Farming Big Industry.

In Virginia and other parts of the United States oyster culture is developing into a great and extensive industry. The industry of oyster farming is progressing satisfactorily in the waters of Long Island sound and along the coasts of Massachusetts, Texas, California and Washington. Oyster planters in an average year are now spreading about 18,000,000 bushels of oyster shells, gravel and seed oysters over their oyster bottoms, which now have an area something in excess of half a million acres, and from this area the annual harvest is about 15,000,000 bushels of oysters, having a market value to the growers of about $10,000,000.

Rains Uncover Gold Nuggets.

The days of '49 have been revived here to a certain extent, says the Sacramento (Cal.) Bee, several Auburn men having brought nuggets worth from $1 to $20 which were found in the ravines and streams since heavy rains have washed the dirt from the gravel. One nugget, which, it is said, is worth $20, was found.

STRAW SHOULD BE SPREAD.

[National Crop Improvement Service.]

The feeding value of straw being comparatively low, and the fertilizing value being high, all straw should be spread upon the fields and not burned or wasted. The use of straw to prevent winter-killing of wheat is now well established.

THE DAIRY RATION

Feeding Tables Hard to Follow on Account of Variation of Ingredients.

[National Crop Improvement Service.]

For many years feeders have endeavored to use so-called standard tables showing the theoretical number of pounds each of so-called digestible protein, fats and carbohydrates. These methods are fatally defective for the following reasons:

First, the tables call for so much digestible food. If there was such a thing as digestible food it might furnish a basis to go by, but digestible food is really apparently digestible food, in that it disappears in the body. Just what use is made of it is not always clear. Some of it turns into gas, some is converted into heat, and much of it is used in the labor of digesting and handling the food. In the case of straw and similar material, nearly all of its energy is used up in the labor of digesting it, leaving little or no net gain. Straw should be returned to the soil. Take two samples of dried barley grains, each containing the same amount of digestible food, and one will give twenty more therms or heat units than the other.

One hundred pounds of digestible food derived from roughage is about equal to eighty pounds derived from grain, so if we add together things which are unlike, we get no tangible results. It is like adding so many pounds to so many gallons. So, the digestible basis of figuring rations is very inaccurate. The correct way is, first, to ascertain how much protein and energy a cow needs to sustain life and keep weight. You can get this from your experiment station, and ascertain how much is necessary to make one pound of milk of a certain fat test, and then feed her as much protein and energy as is needed to maintain her and supply food for as many pounds of milk as she can make.

This is a very difficult problem and few can do it, and we challenge any two men to tackle the same problem under the same conditions and arrive at the same result.

We cannot tell unless we try to find out, that a cow will not give more milk on more feed, or maybe as much milk on less feed. So feeding is largely experimental, as no two cows are alike.

However, the law of averages will hold, and the feeder can save all this trouble and much loss by feeding a ration which his experiment station has in most cases made, say three to four pounds of milk for each pound of mixed feed.

There is one thing certain. The more solids and fat in the milk, the more feed needed per pound of milk. So, a good mixed feed which is properly combined and all the roughage she will eat will greatly simplify your feeding problem and a very little experimenting will soon show you how much concentrates each cow needs to produce a maximum yield.

Hudson River 300 Miles Long.

The entire length of the Hudson river is 300 miles. From Troy to the mouth of the river in New York bay, a distance of 150 miles, the river is tidal, owing to the low grade of its bed, by which the ocean tide is able to back up. It is this lower tidal navigable portion of the Hudson that is of so much importance and, of course, the water is salt. It is regarded really an estuary of the sea. Above Albany and Troy the river is a small stream and to its source the water is fresh.

Oldest of Brazilian Cities.

Bahia, once the capital of Brazil, is still in many ways the center of art and religion in that largest of South American republics. She is the oldest of Brazilian cities and those of her present inhabitants who are descended from a long line of natives of the place—as many of them are—look down on Rio and Sao Paulo as upstarts and parvenus among municipalities.

Always After the Storm.

An aged colored woman was much excited following the shooting of a colored boy by a negro who shot at another man and hit the boy. The police were trying to find the negro who did the shooting. "A policeman is just like a rainbow," asserted the old woman. "They always show up after the storm's over."—New Haven Journal.

A Speed Producer.

The professor was trying to demonstrate a simple experiment in the generation of steam.

"What have I in my hand?" he asked.

"A tin can," came the answer in concert.

"Very true. Is the can an animate or inanimate object?"

"Inanimate."

"Exactly. Now, can any little boy or girl tell me how, with this tin can, it is possible to generate a surprising amount of speed and power almost beyond control?"

One little boy raised his right hand.

"You may answer, Rutherford."

"Tie it to a dog's tail."

NOTICE FOR PUBLICATION.

DEPARTMENT OF THE INTERIOR,
U. S. LAND OFFICE at CROOKSTON MINN.

June 1st, 1917

NOTICE is hereby given that Ole M. Olson, of Goodridge, Minn., who, on March 29th, 1912 made Homestead Entry Serial, No 07526, for E½ NE¼, NW¼ NE¼, NE¼ NW¼ Section 8, Township 154 N., Range 39 W., 5th Prin. Meridian, has filed notice of intention to make three year Proof to establish claim to the land above described, before James C. Wilson U. S. Commissioner Dist of Minnesota at Grygla, Minn., on the 9th day of July, 1917.

Claimant names as witnesses:
John P. Carlson, of Goodridge, Minn.
Gilbert Lesher, of Goodridge, Minn.
Ole Eide, of Goodridge, Minn.
Gust Olson, of Goodridge, Minn.

Proof made under Act June 6, 1912.

AUCTION SALE

Having decided to quit farming, I will sell at Public Auction on my farm, the West half of Northwest Quarter Section 14, Town of Star, four miles East and one mile North of Erie Post Office, on;

THURSDAY JUNE 14th, 1917

Commencing 11 O'clock A. M., Sharp

The following described property:

1 gray Mare, 7 years old, weight 900
1 bay Mare, 6 years old, weight 900
1 gray mare Colt, 2 years old
1 gray Gelding, 2 years old
1 gray yearling colt
1 red cow 8 years old
1 black cow 7 years old
1 red cow 3 years old
1 red heifer 2 years old
1 red heifer 2 years old
1 red heifer yearling
1 black heifer yearling
1 red yearling bull
1 spring calf
1 fall calf
4 sheep
2 young sows

1 Deering binder 6 ft. cut
1 Deering mower 5 ft. cut
1 Johnson hay rake
1 Osborne disc 12
1 Kentucky drill 16 shoe
1 Emerson sulky plow 16 inch
2 horse wooden drag
1 wide tire wagon
1 set bob-sleds
1 single buggy
1 gas engine 4 1-2 H. P.
1 feed grinder
1 saw outfit
1 Winner fanning mill
1 Empire cream separator
3 work harnesses
And numerous other articles

DOUBLE DUTY

A Dairy Ration Has Two Main Uses—Life and Product.

[National Crop Improvement Service.]

A ration is divided into two parts:

1. The part needed to maintain or keep the animal alive.

2. The part needed to make stored up material like wool, fat, meat or milk.

Milk is roughly in solids, one-third each casein (protein), fat and sugar. The casein in milk can only be furnished by the protein in the food. The fat and sugar may be derived from either protein, fat or carbohydrates.

If a cow has the ability to give 50 pounds of milk containing two pounds of casein, and only gets enough protein to make one pound of casein, then she will only give 25 pounds of milk.

A balanced ration is one that has just the exact amount of protein, fat and carbohydrates that the cow needs. Just what this is we cannot ever say exactly, because the amounts vary from week to week and no two cows are alike, nor are feeds alike.

A practical ration is one that has sufficient protein and enough total food to make the greatest amount of milk without the cow losing weight.

A commercially successful ration is the one that makes the most milk or profit, keeps the cow healthy and enables the use of the most roughage.

All the hay and ensilage a cow can eat will keep her alive and make about 15 pounds of milk. Any more milk has to come from grain or grain feed.

The farm can usually raise carbohydrates cheap in the form of hay and ensilage, and, outside of clover, peas, etc., protein can usually be bought cheaper than it can be raised.

The average price of protein feeds with 20 per cent digestible protein was about $25 to $35 per ton before the war, but the prices are much higher now, while hay (clover) with 5½ per cent digestible protein has been rated at $10 per ton, so the protein feed at $40 would furnish protein about the same as clover at $10.

DIFFERENT COWS, DIFFERENT FEEDS.

[National Crop Improvement Service.]

No suggestions that we can offer nor any other formula that can be made can be followed to the letter as a druggist follows the prescription of a physician. Feeds vary in their nutritive values, some being better than the average and some not as good, and cows vary in their ability to digest and transform nutriment. These conditions make it necessary for the feeder to use a good deal of judgment and not follow too blindly the suggestions of others. Any good stock feed is recommended as a base, to be supplemented by home-grown roughage.

CONCENTRATES FOR RATIONS

Taken From an Article by E. S. Savage, Professor of Animal Husbandry, New York College of Agriculture.

[National Crop Improvement Service.]

A good rule to follow in all rations is to have at least three plants represented in the ration. There are seven factors which should be considered: (1) Bulk, (2) Digestibility, (3) Relation between the digestible protein and carbohydrates and fat, (4) Variety, (5) Suitability of the feeds to the animal and product, (6) Palatability, (7) Cost.

As an example, choosing the cheapest feeds relatively, considering manurial values, suitability and all, we would recommend the following mixture of grains as suitable for dairy cows at present prices:

600 pounds distillers dried grains.
450 pounds gluten feed.
300 pounds wheat bran or brewers dried grains.
400 pounds hominy feed.
300 pounds cottonseed or oil meal.

SALT FOR CATTLE.

[National Crop Improvement Service.]

Professor Henry says that a cow requires three-quarters of an ounce per day per 1000 lbs. of weight and six-tenths of an ounce per day per 20 lbs. milk. Therefore, a cow which weighs 1200 lbs. and gives 30 lbs. milk should have 1.8 ounce salt. It must be remembered, however, that salt is generally included in high-grade dairy feeds. It is well to give cows access to extra salt. They will take what their roughage demands.

THE PRICE OF FEED.

[National Crop Improvement Service.]

Feed is handled on a smaller margin than coal, ton for ton. The retail feed dealer who buys in carload lots can sell as cheap as the manufacturer can in less-than-carload lots, the difference in freight rates being the dealer's gross profit. In nearly every instance, a group of farmers can order their feed, through a dealer, in carloads and make a material saving. The difference in freight alone will show a good profit.

Take the chill off the drinking water in cold weather and cows will drink more and produce more.

Don't figure too fine on rations, Be liberal but don't overfeed. You can kill all of your profit by feeding more than the cow can assimilate.

[National Crop Improvement Service.]

The human element in dairy feed is important. Two men may have the same equipment, one make good money, the other fail, while both are supposed to be feeding by the same system and the same tables.

Horse sense is good cow sense.

"PUSSYFOOT" PERFORMS ONE OF MOST DARING DEEDS IN FRONTIER HISTORY

Single-Handed He Enters Outlaws' Camp, Captures John Harris, Murderer of His Son-in-Law, Marches Him Three Miles Through a Forest Region in Darkness and Places Him in Jail at Muskogee.

MYSTERY OF THE MURDER ON THE HOUSEBOAT

Mr. William Eugene ("Pussyfoot") Johnson is a humane man. He balks at murder, but he is more distressed at the sale of whisky to his Indian proteges. It was not so much because James Harris was a murderer that he made his sensational capture of the man as because he heard that Harris was selling whisky to his Indians. That was enough for the Indian department's chief special officer. He went after Harris, and, when Johnson goes after anybody, he gets him.

"It wasn't any business of mine whether Harris murdered his son-in-law or not," said "Pussyfoot" to the writer. "All I had against him was that he was peddling whisky along the Canadian river."

One day in October, 1906, a ferryman named Tate went down about a quarter of a mile below the Pawpaw ferry on the Arkansas river to set a fish net, and observed an object some 40 feet distant in the water. He rowed out to it and found it to be a sack containing the body of a dead man. The body had evidently been placed in the sack, weighted and flung into the stream, but after the lapse of a short period the body rose to the surface, the weights falling to the bottom of the sack and causing it to stand upright. Tate, unfastening the sack, was horrified to discover the corpse within it.

He returned and notified the inhabitants of his village, and they notified the authorities at Sallisaw. The body was removed and found to be weighted with a piece of railroad iron weighing 23 pounds. The back of the head had been crushed in by a blow, which had evidently been the cause of death.

On or about September 27 three men and two women, with some children, had landed near the Pawpaw ferry from two houseboats. For a month past they had been floating idly down the Verdigris river, sustaining life with rod and gun, hunting along the banks, fishing from the boat, trapping small game. The party was composed of James Harris, fifty-eight years old, the stepfather of two young married women, who, with their husbands and children, completed the party.

Nora, a pretty girl of sixteen, was the wife of the murdered man, who was subsequently identified as James McKeehan. He had had a considerable sum of money in his possession. Nora's sister and John Trumbly were the other pair.

On or about October 4, a week after the arrival of the party at Pawpaw ferry, two of the men and the women disappeared. The man who was left behind stated that they had gone to trap and would return shortly. The sudden disappearance of the two men and the women aroused the suspicion of the Pawpaw people that one of them might be the murdered man and the other his murderer. The clothing worn by one of the men, who was said to have gone on the trapping journey, had been similar to, if not the same as that found on the corpse. On October 7 Trumbly told an acquaintance that he believed the others were on a drunken spree somewhere and not likely to return, so he intended to proceed on his journey and overtake them. The citizens of Pawpaw, believing that two of the men had murdered the third, made up a purse to pay the expenses of two who were to follow them and endeavor to obtain particulars. On October 23 Martin and Tate started out to locate them. They found the two houseboats one mile below the Fort Smith bridge, and from information given by people in the vicinity were able to learn that there had been but one man and one woman there, with five children. Martin and Tate returned to Pawpaw with this intelligence.

The authorities at Sallisaw were informed of the facts and asked by the Pawpaw citizens to make further investigations. They refused unless someone would swear that John Doe was dead and that Richard Roe killed him. The evidence thus far secured did not justify any citizen in making oath to this effect. Being caught in this predicament, and being resolved to locate the murderers, two men named Watts and Shrum went to Fort Smith and secured the aid of Deputy Sheriff Charley Henderson. He requested Shrum and Watts to go to the houseboat and investigate. They went to the shanty on the river bank which the pair occupied temporarily and found some bedclothing saturated with blood. Trumbly was found making ready to ship some goods to John Harris at Eufaula, and was at once arrested.

"Your father-in-law has been arrested and put in jail, so you may as well tell us all you know about the matter," they said to Trumbly.

Thereupon, while on the road to the jail, Trumbly made a confession. He said that Harris had become infatuated with his pretty stepdaughter, and had quarreled with McKeehan many times, ostensibly because McKeehan failed to support her. The two men had traveled down the river on different houseboats. McKeehan was known to have money, and frequently lent small sums to his companions, taking their watches and other personal effects as security, and charging them a high rate of interest.

An agreement was made among the members of the party to stop at Pawpaw and steal some sorghum cane. On the way to the field McKeehan dropped behind the others. Harris also stopped, according to Trumbly's story, alleging that he wanted to get a burr out of his shoe. Harris let McKeehan pass him, and then, creeping up behind him, he struck him on the back of the head with an iron bolt, knocking him down, and afterward struck him twice more to make sure that he had killed him. Harris then took $70 from McKeehan's clothing and threatened to kill Trumbly unless he remained with the body while he went for a sack. He got the sack, and the two men put the body in the sack, weighted it with the iron, and sank it in the river. Then Harris took his step-daughter into the boat and started for Eufaula, while Trumbly and his wife drifted down the river to Fort Smith.

Trumbly was placed in the county jail, and the next move was to search for his wife and find out what she knew about the murder. Mrs. Trumbly had not been in the shack at the time of her husband's arrest, and did not know that he was in jail. Watts and Henderson accordingly went back and found her, informing her that she was under arrest. She stoutly denied having any knowledge of the matter.

A few days previously Watts had sold McKeehan a pair of shoes, and on the way to the jail the party passed the goods that were marked for shipment to Harris at Eufaula.

"Why didn't you leave McKeehan's shoes on him when he was murdered?" inquired Watts of Mrs. Trumbly. "Where are they?"

"My husband is wearing them," answered the woman.

Mrs. Trumbly was then asked whether she had seen Tate and Martin at Fort Smith. She said she had. Shrum, who had joined the party, then informed her that he had been lying just outside the cabin and had heard her and her husband discussing the murder, and the way in which it was committed, and added that Trumbly had already made a complete confession. Mrs. Trumbly then admitted her knowledge of it, telling the same story that Trumbly had told. Trumbly and his wife were then taken to Judge Edmonson's office, where they repeated their story.

Watts then called up the authorities at Sallisaw, detailed the story of the confession, and asked for a writ for the arrest of Harris. The Sallisaw authorities, however, insisted that an affidavit would have to be made at Sallisaw before a writ could be issued. It was then decided to call in the chief marshal of the Northern district.

Meanwhile there was great excitement at Fort Smith on the arrival of the pair. William Eugene Johnson happened to be in town at the time. He was planning the series of sensational raids upon the Indian Territory bootleggers which were to make him famous, and he was not intensely interested in this news until somebody mentioned that Harris and his party had been peddling whisky on their journey down the river.

Instantly Johnson was a changed man. He buzzed to and fro like a bee, always in the thick of things, and, meeting Watts, offered to call up Marshal Bennet and secure a writ for Harris' arrest, and that of the woman who was with him. Warrants were accordingly issued and sent to Eufaula, and officials of the government gathered there and began scouring the country to discover the whereabouts of the fugitives.

Meanwhile Johnson, having secured photographs of Harris and his stepdaughter, joined the throng of searchers. It was at first believed that the murderer and the girl had gone to San Antonio, Texas, and this report led to a slackening of the pursuit. Johnson never slackens. He had started out to find the man who was debauching his Indians—and, incidentally, had murdered his son-in-law, and he meant to get him. While traveling on a train between McAlester and Muskogee, Johnson heard a casual remark dropped which led him to believe that the fugitives were still near Eufaula. He got off the train at the next stopping place, and started out alone in a southeasterly direction, until he arrived, late in the afternoon, at a ferry station on the Canadian river. Just before he reached this place he met a bootlegger in a rig, conveying a two-gallon jar of whisky. Johnson let him pass. He was in search of larger game, and the well-trained hound never abandons his first quarry to take up another trail. Being a tenacious sleuth, Johnson probably went after him and got him later.

The ferryman had just returned after conveying the bootlegger across. During the voyage a small quantity of liquid refreshment had passed from the mouth of the jar into the ferryman's, and had unloosened the man's tongue en route to its destination. Johnson began chatting with the man and soon elicited the fact that Harris and his stepdaughter were encamped at a place about three miles on the opposite bank of the stream, where they had been with some others for a period of about ten days.

"I am authorized to arrest them," said Johnson. "I want you to come with me and help."

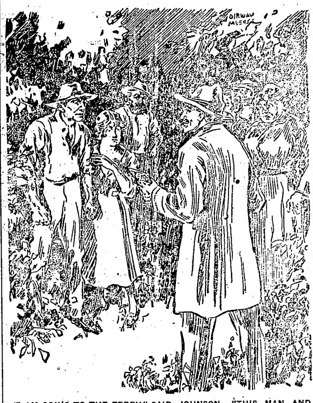
"Sure," answered the ferryman, "only I haven't got a gun."

That didn't faze Johnson. He remounted his horse and rode across country until he came to a farmer's house. Rapping at the door, he asked the man to lend him a shotgun. The farmer, not knowing Johnson, and doubtless scared by the formidable appearance of such a barrel of a man, refused in loud tones of anger.

Johnson remounted and began riding away. No doubt he would have continued his journey without the ferryman's aid, but, as luck would have it, he encountered a visitor riding up to the farmer's house, who proved to be a Mr. Porter, a lawyer of Eufaula. Johnson knew him very well, for Porter had recently defended a druggist whose safe Johnson had smashed in with a sledge-hammer in order to get the whisky which was concealed inside.

However, Mr. Porter bore Johnson no ill-will, and, on learning of the big man's situation, returned with him and identified him to the farmer. Thereupon the farmer handed over his fowling piece to Johnson, and Johnson rode back once more. By this time it was beginning to grow dark, but that did not deter Johnson at all.

He rode his horse on to the ferryboat, which started to make the trip. But the bootlegger's whisky had what is called a "kick" to it, and, when the craft reached the middle of the stream, the ferryman contrived to run it upon a mud bank, and the united efforts of the two were unable to get it off again.



"I AM GOING TO THE FERRY," SAID JOHNSON. "THIS MAN AND WOMAN ARE MY PRISONERS, AND IF ANY ATTEMPT IS MADE TO RESCUE THEM OR TO AMBUSH US, WE WILL KILL THEM FIRST, AND YOU AFTERWARDS."

The ferryman had his horse in the boat and, leaving the boat where it had stranded, the two leaped their steeds into the river and, plunging in after them, led them ashore through the shallow water until at last they stood upon the opposite shore.

There they mounted. It was now twilight, and the dense undergrowth made riding impossible after they had traversed a few dozen yards. They were compelled to dismount and lead their horses again, pushing aside the branches and the dense, tangled masses of vegetation that almost concealed the trail. Suddenly they saw a camp fire in the distance. The ferryman, at Johnson's instructions, remained behind, holding the horses, while Johnson, his revolver in his hand, went cautiously forward.

The quest was fruitless, for the camp was occupied by a perfectly respectable hunting party, none of whose members in the least resembled Harris. They told Johnson, however, that another camp existed further in the depths of the thickets. Johnson brought back the news to the ferryman, and so they made their way forward once again, in almost pitch black obscurity, until at length the gloom was dispelled by the leaping blaze of a roaring fire a short distance ahead of them.

"I guess we've got them now," said Johnson. "You stand by and take charge of the horses, and wait until I give you the signal. When I want you I'll whistle. Then leave the horses and come quickly with your gun."

Leaving his companion in the shadow of the trees Johnson went forward with his famous "Pussyfoot" tread, until he saw three men and three women grouped about the fire. A large tin coffee pot was bubbling upon a glowing log, and the smell of sizzling fish in a frying pan suggested to the sleuth his course of action. He knew that the murderer would resist capture to the utmost of his ability, and the situation was a difficult one. Few men would have tackled it single-handed, as Johnson did.

Assuming his amiable but deceiving smile—afterward famous as the "safe-cracking smile," from the fact that he generally wore it when wielding his ax or sledge-hammer—Johnson advanced boldly toward the group of men and women.

As he advanced he was able to pick out, from their resemblance to the photographs, Harris and his stepdaughter, at once. He saw the six start and glance nervously toward him.

"Got any fish to sell?" asked Johnson. "We're camped along the river, and we came away without our fishing gear. They told me at the camp below that you had had a good catch."

"How much do you want?" growled Harris, looking at Johnson suspiciously.

Johnson began to dicker, and, while doing so, he took a hasty survey of his bearings. A tent stood behind the outlaws, and he surmised that their shotguns were undoubtedly hidden inside. As he chaffered, he advanced until he stood in the middle of the group; then he cautiously edged around until he stood between them and the tent. Then he suddenly whipped his Colt automatic out of his pocket.

"Throw up your hands!" he shouted.

Without a moment's hesitation six pairs of hands went up in the air and stayed up. Johnson smiled; then he whistled sharply, and, to the further consternation of the camping party, the ferryman came out of the bushes at a run, armed with the farmer's double-barreled shotgun, with which he at once covered the party.

Johnson turned to the pair he was seeking. "You are John Harris. And you are Nora McKeehan!" he announced.

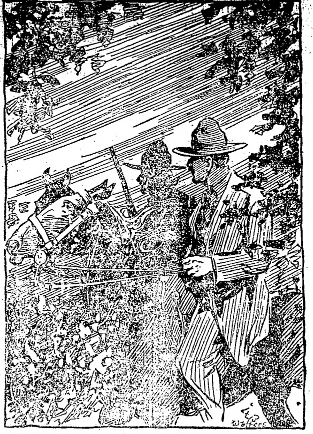
The girl broke down and confessed her identity, while Harris, glaring at Johnson in fury and helplessness, alternately denied himself and upbraided his companion for betraying them. Johnson listened till they had stopped their recriminations and then formally announced that they were under arrest for the murder of McKeehan.

Partly to allay the fears of the rest of the camping party, and more to smooth over the situation and render withdrawal possible, Johnson proceeded to deliver a harangue. He told them that if they played fair no harm would come to them, as he did not want anybody except Harris and his stepdaughter; but that at the first crooked move he and his companion would shoot, and moreover shoot to kill.

"I am going to the ferry," said Johnson. "This man and woman are my prisoners, and if any attempt is made to rescue them or to ambush us we will kill them first and you afterward."

In fact, it was a ticklish place to be in. Johnson had little hopes of escaping either with his prisoners or his life. The night was dark and in the tangled undergrowth it would be the easiest thing in the world to follow until a favorable opportunity of shooting presented itself. This was, in fact, what gave Johnson his reputation as "the shrewdest, justest, wisest, sandiest man in the Southwest," as he has been described.

Leaving the panic-stricken campers around their fire, Johnson and the ferryman started back with their two prisoners along the trail. Not only were there the prisoners to guard and precautions to be taken against ambuscades, but the horses had to be led along the single path in the darkness. However, the three miles was traversed and the ferry reached at last without a mishap, and a rising moon made the remainder of the task less difficult.



THE DENSE UNDERGROWTH MADE RIDING IMPOSSIBLE AFTER THEY HAD TRAVERSED A FEW DOZEN YARDS.

Then a new complication arose. The ferryman's somewhat befuddled brain, and Johnson's preoccupied one, had forgotten that the ferryboat was still stranded on the mudbank in the middle of the river. Upon the bank the prisoners were ordered to mount one of the horses. Johnson and the ferryman mounted the other, Johnson covering Harris with his pistol while his companion linked the two bridles into his hand and guided the horses into the water. The boat was reached and the horses embarked, the most difficult part of the entire proceeding, after Harris had been compelled to jump down into the river and assist in pushing the boat off the shoal. Finally the party reached the other bank.

The ferryman then remembered that he had another horse loose in a pasture, and went in search of it, while Johnson remained covering Harris. He found it after some delay and brought it back. The two captives were now mounted on this, and Johnson and his assistant rode with them into Eufaula, which they reached at ten at night, overtaking at the town limits the other federal officers riding wearily homeward, having been unable to discover the campers. There was much chagrin when "Pussyfoot" revealed the identity of his convoy.

The federal officers had learned of the tip that Johnson had received, and had ridden as far as the ferry, but, finding the ferryman gone and the boat apparently abandoned upon a mudbank in midstream, they had forthwith given up the chase and returned home.

Harris was placed in the local jail under a strong guard, and his stepdaughter taken to the hotel and kept there until the following day, when the two captives were removed to the town of Muskogee.

The two women were soon afterward set at liberty and Harris and Trumbly placed on trial for murder. Both were convicted and sent to join Johnson's colony of prisoners in the penitentiary at Leavenworth, for life. They are still there, it is believed, at the time of writing.

A minor feature of the case was the fact that McKeehan was proved to have had a wife living in Tennessee at the time he "married" Nora Harris.

DANCING SEEN IN CHURCHES

Custom Is Practiced Frequently Abroad in Connection With Various Ceremonies.

This custom is practiced in the parish church of Musgrave, in Westmorland, England, in connection with the ancient rite of rush-bearing. On May day each year twelve young girls of Brough assemble in the morning at the foot of Brough bridge, decorated with flowers and fresh garlands on their heads. Accompanied by a band, they proceed through the fields to Musgrave. The girls are led up to the north aisle of the church, and they hang their garlands at the side, there to remain until the next year. The Gospel is read by the clergyman, prayers are offered and psalms sung. A space is then cleared near the altar, and a fiddle produced. Dancing now commences and continues until the afternoon.

Dancing is frequently seen in Continental churches. During the Corpus Christi octave a ballet is danced every evening before the high altar of Seville Cathedral by boys from twelve to seventeen years of age. They wear plumed hats and the dress of pages of the time of Philip III. To this day a dancing procession chanting a curious carol takes place at Echternach, in Luxemburg, on Tuesday in Whitsun week. It is called the Procession of Jumping Saints, and consists of a long train of pilgrims dancing three paces forward and then backward. They dance from the bridge over the Saur to the church, round the altar, and then separate at a cross in the cemetery.

Fired for Good Reason.

An imperative drill sergeant called a recruit aside and, in a gracious mood, talked to him paternally.

"You're awkward," he said, "either because you were born so, or because you've been taught so. Tell me now what was your occupation before you joined up?"

It appeared the recruit had been in the toy trade—a packer of toys. His job was to pack toy soldiers into cardboard boxes. He had been dismissed by the firm.

"Why, exactly, did they fire you, my man?" asked the other.

"They fired me," answered the recruit, deliberately, "for a good and, as I see now, a very sufficient reason. I put too many bloomin' sergeants in the boxes."

HOW SCIENCE AIDS POLICE

Detective of Modern School Finds It Necessary to Have Chemist Close at Hand.

The modern detective when out on investigation of a murder finds it almost imperative to have a chemist close at hand ready to analyze bloodstains, clothing, or any other article. At the New York police headquarters two or three chemists are always in readiness to be rushed off with their handbags full of chemicals, microscopes, and other instruments to the seat of some crime. These chemists have all the latest scientific inventions at hand when working in their special laboratory, including high-power microscopes and apparatus for photographing blood stains.

Other chemists are employed on the work of analyzing drugs, such as cocaine, opium and morphia. Some are hard at it making minute investigations of scraps of dust, cloth, rubber, and metal. They are often even required to test the scrapings from beneath fingernails, and the dirt on the soles of the shoes of some dead person must be investigated in order to find out whether the body has been conveyed from another locality to the one in which it was discovered.

Watching Our Moods.

What is the source of the tendency to grow careless in courtesy—real heart courtesy towards those one loves the most. Is it a peculiarly subtle form of selfishness? One will strive hard to give positive happiness to another and then spoil it all by carelessly giving way to a mood of sullenness or irritation. Is it not the worst selfishness to be so absorbed in details of one's own comfort as to hurt others? Only by ceaseless watchfulness can one prevent the growth of such habits.—Edward Howard Griggs.

Worry.

Worry, whether real or fancied, is a powerful nagger of nerves. Libraries have been written and religions founded upon the means for muzzling this predacious pirate, this robber of reason and thief of tranquillity, but in every instance we get back to two principles—avoid and don't.

If you can't keep clear of the cause of worry, why, "forget it." Anything that will help bring about this condition—whether it is Marcus Aurelius or Weber and Fields—is admirable, commendable and desirable.

Dr. F. H. Gambell; 'phone No. 140. Thief River Falls, Minn.

Sam Cloutier was a passenger to Thief River Falls Monday evening.

Ole Wiseth of Anstad was a passenger to Thief River Falls Monday.

Mrs. Miller and Mrs. Otto Gulrud spent Sunday in Thief River Falls.

Stephen Singer of Kratka was transacting business in town Monday

Alvin Rattke was an over Sunday visitor in Thief River Falls.

J. J. Kast of Germantown was a business visitor in town Friday.

H. O. Tommerdahl of Erie was transacting business in town Friday.

P. P. Palmer made an auto trip to Thief River Falls Saturday afternoon.

Clarence Stephenson was a Thief River Falls visitor Saturday.

Herb Race was a Thief River Falls visitor Thursday.

Owen Olson and Florence Richards autoed to Grygla last Friday.

The Bundhund family spent Sunday at Germantown.

E. J. Olson returned Friday morning from a trip to the southern part of the state.

Miss Ethel Hibbits left Monday evening for Thief River Falls to seek medical advice.

Prof. J. H. Hay of Thief River Falls was up here Monday attending to his farming interests.

August Ristau and son Ed of Germantown were in town Saturday with some stock for shipment.

Miss Lottie Foss came up from Thief River Falls Tuesday evening for a short visit with friends.

Two cars of stock were shipped from here Saturday to South St Paul. F. Athey of Grygla shipping one and Rake of Germantown the other.

Rev. Paul Walenta will conduct English services in the old school house here next Sunday morning at 11 A. M. Every one welcome

Edwin Christianson of Minneapolis spent Sunday at the home of his parents Mr. and Mrs. H. Christianson. He left again Monday evening.

ESTRAYED—From Ole O. Sunsdahl place, 9 head of young cattle, 4, 2 year old heifers, 1 red bull, 1 year old, other yearlings red and white spotted.

Sam Cloutier, who has been employed at Johnson's Meat market left Wednesday evening for Warren, Minn., where he and another young man will open up a butcher shop.

Ruby Bennes returned to her home in Thief River Falls Saturday evening after spending a few days at the Thoreson home She was accompanied by her cousin Vivian Thoreson.

Monday this section was visited by a nice rain shower, which put a smile on every ones face. Crops were sadly in need of rain and, Monday's shower made the crop prospect look more bright.

The Ladies of the Greenwood Cemetary Aid Society will hold their sale on Saturday afternoon June 16th at the Lamporter Farm. Ice cream and lemonade will also be sold. Everybody invited to come.

Mrs. Anderson, Miss Giere, Mrs. F. O. B[illegible]rd and son Otto and daughter Rosa of Hawley, Minn. arrived here Saturday for a visit at the Kirklie home. Mrs. Anderson is Mrs. Kirklies mother and Mrs. Borsgards is her [illegible]. [illegible] returned to their homes [illegible]

T. Morken of Star was a Goodridge visitor Sunday.

Joe Jordan of Erie was attending to business matters in town Monday.

City and Farm Property for sale. Goodridge Land Co. Call at the Farmers State Bank.

Rev. Fr. Noesen will conduct services in St. Ann's Catholic church here Tuesday June 26th.

Carl Lindstrom and Miss Ella Olson of Highlanding autoed to Apple Marshall county Saturday afternoon and spent Sunday at the home of Mr. Lindstrom's parents.

Will sell or exchange for property in Thief River Falls the following land, Lot 4 in Section 30 and Lots 1, 2, 3 and NE¼ SW¼ in Sections 31-155-39.

H. O. Kjomme, Thief River Falls, Minnesota.

Scrap Iron Wanted.

Until June 25th I will pay $5.50 per ton as I have a contract with the Thief River Hide & Fur Co., which expires about that time.

C. H. Rossmon.

Stallion.

Will make the following stands with my fullblood Percheron stallion maximus 42170.

C. Elg, Erie, Monday
Edwin Hanson, Tuesday afternoon and Wednesday forenoon.
Ole A. Olsen, Reiner, Thursday
Reson and Yohn Livery barn, Saturday

Why not breed to a good horse and get a colt worth at least $25. to $50.00 more than a colt from a grade or scrub horse when of selling age.

S. Lysbakken.

Bids Wanted.

The Village Council of the Village of Goodridge will receive bids on Monday June 18th at 8 p. m., from tractor owners, for grading six blocks of road within the village.

The Council reserves the right to reject any or all bids.

Carl Christianson,
Village Recorder.

NOTICE.

Farmers are hereby requested to cut the weeds and brush and haul the stones away from the road and ditch side adjoining their land, within the town of Reiner; by Oct. 1st., 1917, otherwise the town will do the work and charge it against the land.

By order of Town Board
T. Morken, Clerk

The Minnesota State Fair, which is to be held Sept. 3 to 8, has rendered its services as a "food training camp" to President Wilson, to assist the government in its efforts to increase crop production and reduce the waste of food in this country, which is known to be enormous.

"The men you are calling into service," said Secretary Thomas H. Canfield in part, in a letter to the President, "are being concentrated in military training camps, because it has been found that they can be trained more efficiently in that way than in smaller groups. It would seem that there is just as much necessity to call the great rank and file of food producers and consumers into central food training camps for a short course in the more efficient methods of food production and conservation. The appropriate time is during the lull following the harvest season, since the Nation is working too hard now to care for the crop already planted."

It is believed that the government will cooperate to the fullest extent in furnishing lecturers, demonstrations and exhibits to assist the Fair in its work. The Fair is making an unusual effort to induce breeders of farm animals to exhibit in larger numbers than ever before, that farmers in this territory may be encouraged to raise none but the best breeds and types of animals. Manufacturers of farm machinery are being urged to exhibit all their latest models and improvements. The state is being scoured everywhere for superior specimens of the varieties of grains, forage crops, fruits, vegetables and corn best suited to our soil and climate. The women's department is to hold a series of demonstrations and lectures by specialists of reputation to instruct housewives how to furnish the table at the lowest possible cost Much attention is to be paid to childrens' work, to enlist the children in the work of food production and food conservation.

Farmer Is Killed When Wagon Wheel Crushed His Head

Ole O. Omdahl, a farmer residing in the town of Mayfield, was killed Tuesday evening when the wagon on which he had been riding passed over his head crushing the skull.

Omdahl was driving a load of feed. He had apparently turned to talk to a man driving behind him when the wagon struck a rut and he was thrown from his seat. The wheel of the wagon passed over his head, breaking his jaw and crushing his skull. The man behind him rushed to a nearby farmhouse and telephoned, but when he returned Omdahl was dead,

The deceased is survived by a wife, now living in Montana, and eight children, four of the children being on the farm with him.—News-Press.

Little Chance For Big Training Camp.

There is apparently little hope for the big government concentration camp being located in this section of the state according to those who interviewed the government officers when they were in the city last week The officials made a special trip to confer with the committees at Bemidji and Thief River Falls but held out little hope that either of the sites would be chosen.

From the remarks made by the officers it was gathered that the government was anxious to have the camp located as near as possible to a large city so as to give the soldiers a chance for entertainment during their idle hours and to allow the relatives and friends an opportunity to visit them.

The Twin Cities have offered special inducemetts to the government and it is likely that the offer will be accepted.—News-Press.

Burned Out, Must Make New Start.

Vicent Filbrick, a young man living on a claim near Malcolm was in the city the first of the week for the purpose of registerng his name and address with County Auditor T. P Anderson, being of conscription age. He has had a particularly hard run of luck of late and this will neccesitate some changes in his plans. The forest fires raging in that section of Beltrami county destroyed his house and practically everything else he had on the place, leaving him stranded. Filbrick was to have been married shortly and had erected a good farm house for his bride, but the nuptials will have to be postponed for some time. The fire occured one afternoon while he was helping a neighbor fight off the danger which threatened the settlement and he was unable to do anything to save his property.

Filbrick came to Thief River Falls to find out whether or not it would be possible for him to get across the line to Canada, not being clear on this point, Auditor Anderson informed him that this was very doubtful but that they might make the attempt. Mr. Anderson therefore gave him a certificate showing that he had properly presented himself for registration and that the cards had been forwarded to the sheriff of Beltrami county. It is doubtful, however, if he will be able to enter Canada even with these credentials, in which case he will go to Dakota. His reason for wishing to go to the province was that the wages are higher there and he needs every dollar he can get to put him on his feet again.

PRIMER OF SERVICE.

Ball Game Sunday Goodridge vs. Grygla

Esplee News.

Mr. and Mrs. H. Svenpladsen and family visited at Lewis Larson's last Monday.

Mr. and Mrs. Lewis Larson and family were at the Andrew H. Speten home last Sunday.

H. Svenpladsen helped Lewis Larson a few days last week.

Mabel Speten and Mrs. L. Larson made a short call at A. Shores last Sunday afternoon.

A nice shower of rain visited this part of the country last Sunday.

Lewis Larson and family and Mr. and Mrs. H. Svendpladsen and family made a business trip to Thief River Falls last Thursday. We understand that Mr. Svenpladsen is going to prove up.

The Ladies Aid which was held at Mr. Hoyum's last Thursday was well attended.

Mabel Speten made a short visit at A. Shores last Friday evening.

Andrew H. Speten was in Goodridg last Saturday.

Hannah Henrickson and Caroline Doken had a auto ride last Friday to church where the confirmation class met in the afternoon.

HOW BIG ARMIES WERE CREATED BY GREAT BRITAIN

Least Difficulty Found Was Obtaining Men in Early Days of the War.

PROBLEMS QUICKLY SOLVED

System Is Finally Established After Early Blundering and the Present-Day Efficiency of the Troops in France Is Testimony to the Thoroughness of Their Training.

New York.—We received from the office of the general staff an interesting article on the "Organization and Training of the New Armies of Great Britain" which tells us that the British army that went out to Mons in the early days of August, 1914, was probably the best trained army that has ever left England, the Army and Navy Journal states. Nearly all the officers were men who took a keen interest in their profession and who availed themselves of every opportunity to increase their military knowledge and experience. The training of part of the expeditionary force at Aldershot, under the commanders who themselves led it into action, was training such as never had been seen in England. Owing to the stress of circumstances the training of the new armies during the first period was less complete than that of the armies organized later in the second period, but both armies were characterized by the spirit which puts life into the instruction in military duties.

The practical training in small wars had taught the British soldier the inestimable value of never knowing when he is beaten, the Russians saying that the English never win more than one victory in a war—but that is the last. This and a strong regimental feeling which has always been characteristic of the British army have been preserved in the armies now in the field.

Men at First Responded Quickly.

This regimental feeling tends to make officers and men one happy family, proud of themselves, jointly anxious to make their regiment a glory to the British army. It cultivates a spirit of self-reliance, loyalty and kindness, all based upon the strong sense of discipline and community of interest. It is a broadminded and tolerant method which insists on smartness and on duty and discipline and high courage and courtesy, but not on hate.

The men who came into the army as recruits were the kind who were ready to respond to the British methods of training a volunteer army. The least difficulty found was in obtaining the men in the early days of the war. Recruits came faster than they could be taken care of and supplied with proper equipment. Some 800,000 troops were housed in hired buildings and other temporary quarters, but within a year huts to hold three-quarters of a million men, with water and light laid on, had been built, besides various enormous depots for stores, remounts, etc. These huts seemed to spring up in every part of the country; one great bare moorland in the [illegible]nds, uninhabited since the dawn of history, had been covered with new roads, railways, pumping establishments, power stations and huts for some 40,000 individuals.

Soldiers' Quarters and Food.

Within a year the problem of quartering the troops in the chief training centers had been solved. The previous uncomfortable accommodations were the cause of bad discipline and slovenly training. Fortunately a satisfactory system for feeding the troops on a war basis had been elaborated two years before the war. A description of this method is given. At the beginning certain articles of food, especially meat, were so excessive that great waste resulted, also owing much to the ignorance of the soldiers detailed for cooking duties, who served the excellent food provided in a slovenly unappetizing way, and improvement followed the establishment of schools in instruction in cookery and the admonition to commanding officers to lay stress on the variety in the cooking of the food, on cleanliness and on economy.

Clothing the recruits was another difficulty experienced at the beginning. Important parts of the equipment such as army boots were for a long time sadly deficient. The enlargement of old plants, the creation of new plants and instruction in the methods of manufacture was a slow and laborious process. When the war started, England seemed to have been as badly off in matters of supplies as we. They had less than 800,000 rifles, only half of them the latest pattern. The weekly output of rifles in the United Kingdom was under 2,000, which could be increased somewhat by night shifts, but which at the best was infinitesimal compared with the needs of the new army. Unfortunately the rifle, though needed in larger quantities than any other weapon for an army, requires longer time than any other before its manufacture with new plants can be started, owing largely to the number of gauges of extreme accuracy required in the process; consequently the recruits had to wait long.

By January, 1915, the first new army had about 400 service rifles per battalion, and the second about 100, and it was not until March, 1915, that these armies were beginning to be fully armed. To provide even a limited amount of drill and musketry practice it was necessary to hand around the few service rifles in each battalion as the three Fates handed around their solitary eye in the story of Perseus. Many rifles were too worn to shoot with sufficient accuracy for musketry practice and there was no opportunity to cultivate in the soldier a personal pride in his own rifle and the knowledge of its idiosyncrasies. This scarcity of rifles in the early days prolonged the training.

In the artillery it was quite as bad. In October, 1914, the artillery of one division of the first new army had only six 18-pounders altogether instead of its full complement of 54; another had only a few of the obsolete 15-pounders; in March, 1915, some divisions had only two guns per battery; even in May, when the full complement of guns had arrived for the first new army divisions, the equipment of dial sights, etc., for indirect laying was still deficient. The second new army was at that date in very much the same state, except that in their case the howitzer brigade had not been delivered. The third and fourth new armies were still worse off.

Difficulties in Teaching Gunners.

For months the gunners in some divisions had to learn what they could of the mechanism of a rifle without even seeing one. Some enthusiastic officers provided dummy wooden guns at their own expense and obsolete guns were utilized for the same purpose. When some such guns as these were available there were no artillery instruments such as dial sights, range finders, directors and so on, without which a modern battery is almost helpless, except those that could be improvised by an ingenious limber gunner. Similarly horses, harness and the proper wagons were hardly ever complete for any battery of the first three armies till on the very eve of their departure over sea. Noncommissioned officers fit to train recruits were sadly lacking. Those having experience could not be spared from their regiments at the front. The most that could be done was to have one experienced man in each unit and this only by employing 200 officers of the Indian army home on leave and retired officers ("dug out" as they were popularly called). Some of these did important service and others were of little value, not being up-to-date and lacking the capacity of making themselves so. The infantry drill had been altered and the double company substituted for the old single company; in artillery the changes had been even more notable by the introduction and almost exclusive use of indirect laying, which required in artillery officers and noncommissioned officers facilities of rapid observation and calculation; again the cooperation of artillery and airplanes was a closed book to all the old school gunners; the use of telephones and signals had been developed in a manner unknown to [illegible]e recent generation of officers.

Work at the War Colleges.

To secure officers required the courses at Woolwich and Sandhurst were reduced and the age limit lowered. A certain number of commissions were granted directly to university graduates and ex-warrant and noncommissioned officers were given commissions. There were at the beginning of the war 22 senior officers' training corps. Some of the best trained men from the senior corps were given regular commissions at once and large numbers received "temporary commissions" for service with the new battalions. A great many senior boys from the cadet corps of the schools were also given temporary commissions. It is an indication of the value of these O. T. C.'s at a critical junction of the war, that within the first year of the war the Oxford university O. T. C. provided over 2,300, three of the smaller northern universities' O. T. C.'s over 1,000 and the Inns of Court O. T. C.'s over 2,500. It was found necessary to give temporary commissions even to university graduates and the senior boys in public schools. Practically all pupils of the public schools applied for commissions as soon as they reached the age limit. Excellent material for junior officers was found among the young men who had gone to the colonies or foreign countries to take up a life of adventure. No young men made better officers than these, for all had taken some risks; they had been on their own responsibility, and generally had men under them and experienced dangers by flood and field. The supply of officers for a technical corps proved surprisingly adequate, the war office selecting according to the recommendations of the heads of the corresponding civil professions. In addition to these the war office has obtained a large staff of specialists for work with the troops, e. g., bacteriologists, ophthalmologists, aurists, radiologists, dermatologists, experts in tropical diseases, etc.

Officers Who Trained Themselves.

For all practical purposes, most of the infantry subalterns of the new armies had to train themselves during the first five months of the war as best they could in the intervals of training their men. If the officers were untrained, the noncommissioned officers of the new armies were in the main even less trained. This presented a marked contrast to the really good sergeant of the old school with his mingled humor and severity, putting a squad of recruits through their paces, the type of Kipling's Private Mulvaney. There was some compensation for this, however; the fact that the necessity of doing the noncommissioned officers' job as well as their own gave the officers [illegible] proficiency and better understanding of their men.

An experienced British general writing on the training of some of these new divisions, said that a mass of civilians had been transformed in less than eight months into an army which had more practical training for war than it had ever been possible to give to troops in England before. There was, he added, a feeling of confidence in all ranks, due partly to the organizing power of a short-handed staff, but chiefly to the keenness of all ranks to make themselves fit for the front. The experiences here recorded are highly suggestive of our own experiences and they indicate the methods we shall have to follow in creating armies to meet our regular requirements.

LIST TEN VIRTUES FOR OREGON PUPILS

Portland, Ore.—The highest ten virtues are to be taught the school children of Oregon. State Superintendent of Instruction J. A. Churchill has completed listing answers of more than 1,000 teachers in Oregon as to what they consider the ten virtues that should be given foremost place in the moral instruction planned for the common schools of the state. The virtues receiving the highest number of votes in the order of preference are:

Honesty, truthfulness, cleanliness, obedience, respect, courtesy, patriotism, kindness, industry and punctuality.

LOSS FROM BAD ROADS.

[National Crop Improvement Service.]

The U. S. Department of Agriculture estimates that the farmers of the nation are annually losing $250,000,000 because of their inability to market their produce at certain times of the year. Counties which are rich in agricultural products are burdened with bad roads and it is of much concern to the farmers to see to the building of good roads. Good roads, 365-day roads, are insurance for continued community prosperity.

HOW SHALL WE PAY FOR THE WAR?

A Constructive Criticism on the House Revenue Bill.

LOANS BETTER THAN TAXES

Five Reasons Why Excessive Taxes at the Outset of War Are Disadvantageous—Great Britain Example Worthy of Emulation—How the Taxes Should Be Apportioned.

By EDWIN R. A. SELIGMAN,
McVickar Professor of Political Economy, Columbia University.

On May 23, 1917, the House of Representatives passed an act "to provide revenue to defray war expenses and for other purposes." In the original bill as presented by the Committee of Ways and Means, the additional revenue to be derived was estimated at $1,810,420,000. The amendment to the income tax, which was tacked on to the bill during the discussion in the House, was expected to yield another $40,000,000 or $50,000,000.

In discussing the House bill, two problems arise:

I. How much should be raised by taxation?

II. In what manner should this sum be raised?

I. How Much Should Be Raised by Taxation?

How was the figure of $1,800,000,000 arrived at? The answer is simple. When the Secretary of the Treasury came to estimate the additional war expenses for the year 1917-18, he calculated that they would amount to some $6,000,000,000, of which $3,000,000,000 was to be allotted to the allies, and $3,600,000,000 was to be utilized for the domestic purposes. Thinking that it would be a fair proposition to divide this latter sum between loans and taxes, he concluded that the amount to be raised by taxes was $1,800,000,000.

There are two extreme theories, each of which may be dismissed with scant courtesy. The one is that all war expenditures should be defrayed by loans, and the other is that all war expenditures should be defrayed by taxes. Each theory is untenable.

It is indeed true that the burdens of the war should be borne by the present rather than the future generation; but this does not mean that they should be borne by this year's taxation.

Meeting all war expenses by taxation makes the taxpayers in one or two years bear the burden of benefits that ought to be distributed at least over a decade within the same generation.

In the second place, when expenditures approach the gigantic sums of present-day warfare, the tax-only policy would require more than the total surplus of social income. Were this absolutely necessary, the ensuing havoc in the economic life of the community would have to be endured. But where the disasters are so great and at the same time so unnecessary, the tax-only policy may be declared impracticable.

Secretary McAdoo had the right instinct and highly commendable courage in deciding that a substantial portion, at least, of the revenues should be derived from taxation. But when he hit upon the plan of 50-50 per cent., that is, of raising one-half of all domestic war expenditures by taxes, the question arises whether he did not go too far.

The relative proportion of loans to taxes is after all a purely business proposition. Not to rely to a large extent on loans at the outset of a war is a mistake.

Disadvantages of Excessive Taxes.

The disadvantages of excessive taxes at the outset of the war are as follows:

1. Excessive taxes on consumption will cause popular resentment.

2. Excessive taxes on industry will disarrange business, damp enthusiasm and restrict the spirit of enterprise at the very time when the opposite is needed.

3. Excessive taxes on incomes will deplete the surplus available for investments and interfere with the placing of the enormous loans which will be necessary in any event.

4. Excessive taxes on wealth will cause a serious diminution of the incomes which are at present largely drawn upon for the support of educational and philanthropic enterprises. Moreover, these sources of support would be dried up precisely at the time when the need would be greatest.

5. Excessive taxation at the outset of the war will reduce the elasticity available for the increasing demands that are soon to come.

Great Britain's Policy.

Take Great Britain as an example. During the first year of the war she increased taxes only slightly, in order to keep industries going at top notch. During the second year she raised by new taxes only 9 per cent. of her war expenditures. During the third year she levied by additional taxes (over and above the pre-war level) only slightly more than 17 per cent. of her war expenses.

If we should attempt to do as much in the first year of the war as Great Britain did in the third year it would suffice to raise by taxation $1,250,000,000. If, in order to be absolutely on the safe side, it seemed advisable to increase the sum to $1,500,000,000, this **should, in our opinion, be the maximum.**

In considering the apportionment of the extraordinary burden of taxes in war times certain scientific principles are definitely established:

How Taxes Should Be Apportioned.

(1) The burden of taxes must be spread as far as possible over the whole community so as to cause each individual to share in the sacrifices according to his ability to pay and according to his share in the Government.

(2) Taxes on consumption, which are necessarily borne by the community at large, should be imposed as far as possible on articles of quasi-luxury rather than on those of necessity.

(3) Excises should be imposed as far as possible upon commodities in the hands of the final consumer rather than upon the articles which serve primarily as raw material for further production.

(4) Taxes upon business should be imposed as far as possible upon net earnings rather than upon gross receipts or capital invested.

(5) Taxes upon income which will necessarily be severe should be both differentiated and graduated. That is, there should be a distinction between earned and unearned incomes and there should be a higher rate upon the larger incomes. It is essential, however, not to make the income rate so excessive as to lead to evasion, administrative difficulties, or to the more fundamental objections which have been urged above.

(6) The excess profits which are due to the war constitute the most obvious and reasonable source of revenue during war times. But the principle upon which these war-profit taxes are laid must be equitable in theory and easily calculable in practice.

The Proposed Income Tax.

The additional income tax as passed by the House runs up to a rate of 60 per cent. This is a sum unheard of in the history of civilized society. It must be remembered that it was only after the first year of the war that Great Britain increased her income tax to the maximum of 34 per cent., and that even now in the fourth year of the war the income tax does not exceed 42½ per cent.

It could easily be shown that a tax with rates on moderate incomes substantially less than in Great Britain, and on the larger incomes about as high, would yield only slightly less than the $532,000,000 originally estimated in the House bill.

It is to be hoped that the Senate will reduce the total rate on the highest incomes to 34 per cent, or at most to 40 per cent, and that at the same time it will reduce the rate on the smaller incomes derived from personal or professional earnings.

If the war continues we shall have to depend more and more upon the income tax. By imposing excessive rates now we are not only endangering the future, but are inviting all manner of difficulties which even Great Britain has been able to escape.

Conclusion.

The House bill contains other fundamental defects which may be summed up as follows:

(1) It pursues an erroneous principle in imposing retroactive taxes.

(2) It selects an unjust and unworkable criterion for the excess-profits tax.

(3) It proceeds to an unheard-of height in the income tax.

(4) It imposes unwarranted burdens upon the consumption of the community.

(5) It is calculated to throw business into confusion by levying taxes on gross receipts instead of upon commodities.

(6) It fails to make a proper use of stamp taxes.

(7) It follows an unscientific system in its flat rate on imports.

(8) It includes a multiplicity of petty and unlucrative taxes, the vexatiousness of which is out of all proportion to the revenue they produce.

* * * * * * * *

The fundamental lines on which the House bill should be modified are summed up herewith:

(1) The amount of new taxation should be limited to $1,250,000,000—or at the outset to $1,500,000,000. To do more than this would be as unwise as it is unnecessary. To do even this would be to do more than has ever been done by any civilized Government in time of stress.

(2) The excess-profits tax based upon a sound system ought to yield about $500,000,000.

(3) The income-tax schedule ought to be revised with a lowering of the rates on earned incomes below $10,000, and with an analogous lowering of the rates on the higher incomes, so as not to exceed 34 per cent. A careful calculation shows that an income tax of this kind would yield some $450,000,000 additional.

(4) The tax on whisky and tobacco ought to remain approximately as it is, with a yield of about $230,000,000.

These three taxes, together with the stamp tax at even the low rate of the House bill, and with an improved automobile tax, will yield over $1,250,000,000, which is the amount of money thought desirable.

The above program would be in harmony with an approved scientific system. It will do away with almost all of the complaints that are being urged against the present. It will refrain from taxing the consumption of the poor.

It will throw a far heavier burden upon the rich, but will not go to the extremes of confiscation. It will obviate interference with business and will keep unimpaired the social productivity of the community.

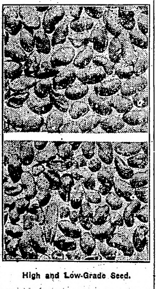
It will establish a just balance between loans and taxes and will not succumb to the danger of approaching either the tax-only policy or the loan-only policy. Above all, it will keep an undisturbed elastic margin, which **must be more and more heavily drawn upon as the war proceeds.**

NINE COMMERCIAL STRAINS OF ALFALFA

GOOD FIELD OF ALFALFA ON KENTUCKY FARM.

(Prepared by the United States Department of Agriculture.)

There are now nine fairly distinctive commercial strains of alfalfa recognized in the United States. These vary in their climatic and other requirements and the farmer who is contemplating planting alfalfa will do well to ascertain for himself what variety is best suited to his condition. Full information on this point is contained in Farmers' Bulletin No. 757, of the U. S. Department of Agriculture.



High and Low-Grade Seed.

"Common alfalfa" is a general term used to include all the alfalfas that are not clearly of hybrid origin or do not have distinct and uniform characteristics. The term, however, includes a number of different strains which are often designated by some geographic or descriptive name, such as Kansas grown alfalfa, dry-land alfalfa, irrigated alfalfa, etc. In this connection it may be said that the "dry-land" alfalfa seed offered on the market has so far failed to show any noticeable superiority in resisting drought over that grown with an abundance of moisture. On the other hand, strains developed in the South have been found less hard than those in the northern states, although they usually produce larger yields. Turkestan alfalfa, when subjected to thorough tests, has been found inferior to American-grown strains.

The Grimm, Baltic, Canadian variegated, and sand lucern are well-known commercial strains of variegated alfalfa. With the exception of sand lucern, they have been found more resistant to cold than other commercial strains, and may be recommended for sections where winterkilling occurs frequently.

Peruvian alfalfa, under favorable conditions, outyields any other commercial strain. For the United States, however, it is not very generally useful because it is not resistant to severe cold and can only be grown successfully where the winter temperature is mild, as in the Southern and Southwestern states.

Arabian alfalfa has a tendency to be shortlived and cannot, therefore, be regarded as a satisfactory variety.

No matter what variety the farmer chooses, he should learn to distinguish good from poor seed. Plump seed of an olive green color almost invariably germinates well, while shriveled or brown seed generally turns out poorly. The presence of any appreciable quantity of weed seeds or other impurities indicate poor quality.

THE BEST DAIRY FEED

Made From Grain From Which the Human Food Values Have Been Taken.

By Prof. F. D. Fuller.

[National Crop Improvement Service.]

The reason why the best dairy feeds are less expensive than the same grains on the farm is because the principal elements of human food are taken from these grains before they are ever made into feed. The by-products of cereal mills, glucose factories, malt houses, etc., constitute often more than 50 per cent of the total bulk of mixed dairy feeds of the better class.

These oats, barley and corn by-products are considered by experts in animal nutrition as very valuable feed materials. After these cereals are ground in the manufacture of alcohol, for which the use is growing more important daily in the arts, the solid residue is dried in vacuo, and is then known as "dried grains." If made from corn, these grains contain on an average of about 30 per cent crude protein and 10 per cent crude fat. If made from rye, while valuable, they are of somewhat lower feed value. The barley residue contains over 70 per cent more crude protein than wheat bran and twice as much crude fat. In fact, their food value is largely increased by the process.

All these products are widely used by the best dairy feeders and are relied upon very extensively in milk production. There is no doubt of the fact that if the supply of these products were radically limited or entirely exhausted, it would have a serious effect upon the milk production throughout the country and the dairymen would have one more burden added to their already overtaxed strength.

Cottonseed meal is composed principally of the kernel, with such portion of the hull as is necessary in the manufacture of oil. Cottonseed meal, if choice, must contain at least 41 per cent crude protein. It is one of the richest of all feeds in this substance and carries about 8 per cent crude fat. On account of its extreme concentration it can be fed only in limited quantities and always in conjunction with some products to furnish bulk. This meal is an important ingredient in many manufactured feeds.

HOME MIXED FEEDS.

[National Crop Improvement Service.]

When a man undertakes to mix his own rations, what does he do? He buys straight feeds. Take cottonseed meal as a common example. There are a great many different grades of cottonseed meal, and the man who is looking for a low-priced feed is sure to get a low grade. The demand for cheap feeding ingredients has caused the quality to be gradually whittled down. Consequently the farmer nearly always works with feeds which are poorer than he believes them to be. He does not get adequate state protection because inspectors do not go to a farmer's barn to draw samples, and even if they did, it would be hard to get a complete chain of evidence.

A farmer has no facilities for having his feed analyzed and he doesn't know what he is working with. The analyses of mixed feeds costs about ten cents per ton, and if every farmer will read the various bulletins from the agricultural colleges he will soon know those brands which can be depended upon. There is no doubt that at the present prices of grain any farmer can save money by selling his cereal crops and buying mixed feed. Cornmeal, oil meal and cottonseed meal are all high, but the by-products of barley and rye are all more reasonable in price.

Corn has become costly largely due to the demand for pork and beef Americans will have those meats at almost any price. This puts corn on a meat basis, and the dairy business will have to fall back on the by-products of grains.

GIVE COWS PLENTY OF WATER.

[National Crop Improvement Service.]

When cows are in full milk they require plenty of water. It is stated authoritatively that cows in full flow of milk will consume 50 per cent more water than when dry.

Poor feed sells to poor feeders.

Only that part of the feed that digest is of use—the rest is mostly fertilizer material.

No protein—no casein; no casein—no milk; not enough protein—not so much milk; also not enough feed—not so much food.

Foods with the highest protein and highest analysis are usually but not always the cheapest to use.

Cows won't make milk out of water and air.

[National Crop Improvement Service.]

Starchy feeds like corn and oats often sell as high as protein feeds because of the demand for them for horses and other work animals. Starchy feeds are also good to fatten steers. That is why they are often as high in price as dairy feeds, which are strong in protein.

[National Crop Improvement Service.]

Home-grown grains can often be profitably traded for protein feeds. While oats are generally demanded for horse feed, they are nearly always too expensive for dairy feed. Oats by-products, however, are very useful for bulk.

HOW "PUSSYFOOT" JOHNSON MADE GOOD CITIZENS OF INDIAN CHARGES

Story of a Deed That Will Render Johnson Immortal in the Hearts of the Pueblo Indians—Fights for Boy Deputy Against Forces of Bad Government Which Ultimately Cost Him His Official Position.

ANOTHER OF JOHNSON'S GREAT EXPLOITS

The case of Juan Cruz, which created a sensation in the West and was instrumental in rending the Indian department asunder, was also the cause of Johnson's resignation. He could not have maintained his position at the cost of letting the boy hang; he preferred to stand by him and unite the powerful influence of New Mexico's politicians against him.

After the incorporation of the territory into Oklahoma Johnson's activities lay largely among the Indians of New Mexico and California. As chief special officer, he had the charge of protecting the Indian reservations against the inroads of the bootleggers and other vicious characters. If Johnson had succeeded in obtaining the unswerving devotion of his white associates, he was still more blindly trusted by his Indians. On every reservation today Johnson is remembered with touching faith and child-like affection. It is no exaggeration to say that he has done more to put the red man on his feet and make him self-respecting than anyone else who has labored for the Indian in the United States since the days of the first missionaries. More than that, Johnson so established the Indian's reputation that his testimony became as valuable before a jury as that of a white man.

One of his most zealous followers was a certain Bill Pablo, a man of unbounded charity and courage, who maintains a dozen Indian orphans on his farm at his own expense and is working with all his might to improve the morals of his people. Yet, when Johnson met him, he was an outlaw, with four murders to his name. He was a terror to the whites. Johnson's interest in the man was aroused by his notorious character.

"One day," said Johnson, "I purposely met him where we could talk alone, and there we had it out together.

"'Why is it that you are always fighting the whites?' I asked.

"'Because they are all liars, thieves, and whisky peddlers,' he retorted.

"'Are they all liars, thieves, and whisky peddlers?' I ventured.

"'So near there ain't no difference,' said Pablo.

"'Am I a liar and thief and whisky peddler?' I questioned.

"'I believe you are on the square,' he answered, looking me straight in the eye.

"'Then you and I are on the same job,' I told him. 'You come with me and we will make sausage of these white liars and thieves and whisky peddlers. I'll give you two dollars a day and expenses, and give you the time of your life besides.'

"Bill jammed his boot-heel into the sand a couple of times, and then grabbed my hand. And that Indian went out after the whisky peddlers with the same zeal that he had displayed in different directions. In the three years that followed he had more to do with the cleaning up of southern California than almost any other man.

"Bill's arrival in any hamlet within a hundred miles of his home was the signal for the whisky peddlers to take to the brush. But taking to the brush did not help them much, for every Indian was Bill's friend, and would put him on the trail."

On one occasion Pablo was detailed to assist in the raiding of a saloon near Sasakwa. Bill was no Pussyfoot in action. Rushing through the door, he ordered the proprietor to throw up his hands. He failed to notice, however, that a bartender was bending down behind the bar. His presence was suddenly brought home to Pablo when a revolver barked and a bullet nearly carried away one of Bill's ears. With a roar like a bull Pablo immediately replied with a shot which broke the bartender's wrist. Then, jumping over the bar, he picked the man up and flung him into the middle of the saloon to his assistant, while, collaring the proprietor, he walked off with him through the terrified crowd of loafers.

When Johnson took a hand in the New Mexico situation the lot of the Indians there was a pitiable one. For years they had been suffering at the hands of the crooked politicians who ran the state. As an instance of this: about a hundred and fifty years previously the Pueblos of Santa Clara had purchased from the Spanish government a tract consisting of some ninety thousand acres of land, for which they paid a thousand dollars and a horse. The land was transferred to them in fee simple, and used by them until a few years previously, when some land sharks took the question of ownership into the courts, with the result that the Santa Clara purchase dwindled in size from ninety thousand acres to a narrow strip of less than nine hundred acres along the Santa Clara river, known as the Shoestring Grant.

This particular affair came to the attention of Mr. F. E. Leupp when he was commissioner of Indian affairs, and he interested himself in the matter to the extent of giving the Indians about thirty thousand more acres as an "executive order" Indian reservation, in lieu of what they had lost through the manipulations in the courts. Subsequently an attempt was made to manipulate this new grant by bestowing it upon other tribes, doubtless with no disinterested purpose in view. At the same time cattle were driven upon the Indians' lands and pastured there, without any shade of legality.

But the worst evil with which the Pueblo Indians had to contend was the liquor traffic, though its effects, being more insidious, were less apparent. The crooked politicians at Santa Fe were in close alliance with the illicit dispensation of whisky among the red men.

Johnson had plenty of deputies at his call when, in 1910, he resolved to clean up conditions among the Pueblos. Johnson knows a man when he sees one, even if he is less blustering but no less courageous than the redoubtable Bill Pablo. Such a man was young Juan Crus of Pable San Juan, whom Johnson saved from legal murder at the cost of his position.

Juan Crus was a deeply religious young Indian, devoted to his church, his young wife Dolorita, and their baby Jess. He had lived all his life upon his reservation, and had witnessed the evils which the introduction of whisky brought in its train. He had seen two of his companions shot down in cold blood because after being plied with drink they refused to part with their possessions at the bidding of the liquor peddlers. Cruz proved to be one of Johnson's best deputies, and particularly reliable.

When Johnson undertook his cleaning up campaign he put his first assistant, Harold F. Coggeshall, in charge of the initial work. This was accomplished chiefly through the Indian deputies themselves, who went at it with true Indian ardor, about in the same spirit as that with which they would have gone on a bear hunt. Their chief enemies were the Mexicans, who were invariably opposed to their efforts. But other enemies were harder to overcome.

A company of politicians in Santa Fe had incorporated a liquor selling concern, which traded with the whites, according to law, and with the Indians in defiance of it. It did a business amounting to $30,000 a year, and was a political factor which gave it immunity from prosecution.

The Indians gathered evidence to show that this company was violating the law, and went with it before the grand jury. The grand jury did little or nothing; the temerity of the Indians was a matter for ridicule, not for action. However, the Indian superintendent was president of this organization, and the storm of protest which arose was so great that Assistant Commissioner Abbott went down from Washington to Santa Fe to investigate matters. The superintendent was forced to resign the presidency, but Mr. Abbott came to the conclusion that Johnson had been overzealous in his work and ordered him to discharge two of his deputies, who had been prime movers in the complaints, one of them being Miss Clara True, a stanch friend of the red man.

At this time Commissioner Valentine, who was at the head of the department and Johnson's stanch friend, was away on sick leave.

The company was reorganized, and the new president was a man who recently had been convicted of selling whisky to Indians. Naturally the establishment continued to run on the same lines as before. It was in the midst of the continued agitation that what is known as the Tragedy of Chamita occurred.

The zeal of Johnson, aided by the efforts of a white woman, Miss True, who has been mentioned, had brought about a reforming spirit among the Pueblo Indians. So thoroughly was Miss True identified with the Pueblo of Santa Clara that she occupied the position of secretary to the tribal council. But there came about a change in the situation, and on Miss True's return from a visit to California, she found that the politicians were practically in possession of the Indians' lands, and the bootleggers had again overrun the reservations. However, she succeeded in cleaning up Santa Clara and set to work upon the neighboring villages.

It was Indians of the type of Juan Crus who make one hope that the red man is not unadaptable to civilization. He was of a type rare among his people, gentle and spiritual, with a face that might have served as a model for a red Sir Galahad. Although he was engaged upon Johnson's work, little notice was paid to him, as he had not the forceful aspect of a fighter, and his efforts were not taken seriously.

About this time he was called home to his pueblo at San Juan by a message that a son had been born to him and his girl wife Dolorita. Juan refused to supply whisky to his neighbors on the occasion of the christening, an act which, breaking completely with the custom of immemorial ages, brought him into prominent notice among his people. After several months of voluntary service Juan succeeded in cleaning out the bootleggers from his own village, often at the cost of assault, and always under persecution. [illegible]

mission to do the work of a deputy at the Mexican village of Chamita, a peculiarly vicious center, filled with dives, and inhabited only by Indians and Mexicans. At one of the numerous "joints" in this settlement it was known that the vilest spirits were supplied to the Indians, in violation of the territorial laws. The "bad man" of Chamita was a desperado known as Garcia, who was such a notorious character that he had been run out of his own village. Cruz determined to arrest Garcia and thereby strike a blow at the traffic. He consulted nobody about his intentions in the matter. Had he been more worldly wise, says Johnson, he would have asked for help, and would certainly have obtained it. Instead of which, he armed himself with a revolver, with whose use he was hardly acquainted, and went alone at night to Chamita when he knew Garcia would be there.

He waited outside the dive until he saw Garcia emerging, and then, approaching him, he wrested the whisky bottles which Garcia was carrying out of his hand, with the object of taking them to headquarters and using them as evidence against him.

Garcia and his companions, three other Indians of the lowest type, at once set upon Cruz and began beating him. His face was cut open with a stone, he was struck and clubbed repeatedly. With the blood streaming down his clothes Juan shouted to the attackers to desist, announcing his intention of shooting unless they did so. Instead of which they flung themselves upon him and bore him to the ground, and drew their knives, intent upon finishing him.

In the darkness Cruz fired into the air, to scare his assailants. How Cruz managed to hit anybody, being wholly unused to firearms, is singular; but the bullet, guided by chance, pierced Garcia through the heart, and he fell dead. His cowardly assistants at once released their hold upon the boy and ran at the top of their speed.

Then Cruz, badly mauled, but still clinging to the bottles which he had taken from the dead man, mounted his pony and rode 14 miles to the reservation to tell Miss True what had happened. He was put to bed and his wounds dressed, and early the following morning he was arrested and taken to Santa Fe to await trial for murder. Miss True at once communicated with Johnson, who, characteristically loyal to his men, at once dropped all his other business and wired an account to Commissioner Abbot, with a view to hurrying to the scene.

But the politicians at Santa Fe also got busy. Cruz had been one of the Indians who had identified themselves most prominently in the appeal against the illicit shebeen at Santa Fe. There had also been a good deal of friction between the Indian superintendent and Johnson's deputies. There was some doubt as to the exact status of Juan, and, as a result, Commissioner Abbott sent the following telegram to Johnson:

"Your telegram seventh, Cruz shooting. Since Cruz not authorized government employe your service, take no steps regarding his defense. Consult Crandall and give him all information in your possession."

It is only fair to the commissioner to state that it was not intended to leave Cruz to his fate, but merely to leave his defense in the hands of the Indian superintendent, as he was not a regularly authorized government employe. However, Johnson believed that the boy was being railroaded to the gallows. Inasmuch as the sole witnesses to the killing of Garcia were the three remaining assailants of Cruz, who swore in the preliminary inquiry that the killing was entirely unprovoked and deliberate, the chances were strong that Cruz would expiate the crime with his life. Commissioner Abbott's telegram effectively muzzled Johnson.

But there were plenty of others anxious to come forward in behalf of [illegible]
